Applications of tincture of iodine are effective in the treatment of small chronic ulcers.

Persistent vomiting is sometimes controlled by one-drop doses of tincture of iodine every half hour.

Burns.

Slight burns are very much relieved by coating with the white of egg, and more severe ones are quickly relieved by an application of olive or sweet oil mixed with lime water. Anything that keeps the air from the burn affords relief.

Headaches and Eye Strain.

It is said that a large percentage of headaches—as much perhaps as ten per cent—are due to errors of refraction, or eye strain. When this is suspected it is wise to consult

Your Wife Should Be Considered

Mr. Farm Owner:

You may have fitted up your farms and out-buildings with electric, labor-saving devices, but have you considered the *lady of the house*?

An electrically driven washer, mangle, vacuum cleaner and other household devices will greatly lessen her work and add to her comfort.

A few words to your lighting company suggesting as a preference G-E MOTORS will repay you for the trouble.

GEO. N. TYLER, Brookdale Nursery, Los Gatos.

SAN FRANCISCO.

San Francisco, May 23, 1917.
WHEAT.

Wheat quotations were noticeably easier this week, despite a lighter offering in the market. The call here was slow, and very little trading in spot goods reported. Russian Red showed the heaviest decline. Further declines are looked for, especially in case the Eastern markets continue downward.

Konora wheat, re-cleaned.....None offered
Northern Club.....None offered
California Club, per ctl.....None offered
Northern Bluestem.....\$5.15@5.20
Northern Red.....5.00@5.20
Russian Red.....5.00

BARLEY.

Trading in futures was slower this week, and spot sales were almost unknown. One peculiar feature of the local situation was that on two days during the week, there were no receipts of barley reported for San Francisco. The market closed easier, with all signs pointing to lower prices.

Shipping, ctl.....Nominal
Brewing.....Nominal
Choice feed, ctl.....\$2.40@2.50

OATS.

In the face of no trading, the local quotation on oats is of necessity nominal. However, the highest held figure reported this week on white feed stock was \$2.85 per cental.

White feed, per ctl.....\$2.75@2.85

BEANS.

Prices on beans showed a very uncertain trend during the past week, with some varieties higher under a good call and others much easier, owing to light holdings with a marked shortage of first-class stock in them. Bayos, small whites and pinks fell in the first named class, with Mexican reds, blackeyes and garbanzos coming under the latter description. Good prices to growers on contracts continue to prevail, reported deals including limas at 10% to 10% cents per pound and 10@10% on both large and small whites.

Bayos, per ctl.....\$11.50@12.00
Blackeyes.....9.75@10.00
Cranberry beans.....11.90@12.00
Horse beans.....6.50@7.00

Tepary beans.....None offered
Garbanzos.....6.00@6.50

CORN.

No actual changes were reported in the corn market this week, but there was a very easy tone ruling throughout and very few lots of Egyptian stock brought the top quotation.

(First-hand prices on strictly first-class grain, San Francisco.)
Eastern Yellow, ctl, bulk.....Unsettled
California, sacked.....\$3.45@3.50
Milo Maize.....None offered
Egyptian.....\$4.25@4.50

HAY.

Wheat, barley and oat hay quotations all registered small declines during the past week, although it was principally the No. 2 grades of these varieties that were affected. Increased receipts of new crop alfalfa and the untimely of interior holdings of old crop hay were direct cause of these declines. There was a very noticeable gain in receipts, arrivals totaling 1382 tons, as compared with 1135 tons for the week preceding and 1294 tons for the week before that. The local demand proved sufficient to prevent any piling up of stock, while export trading was practically nil. It is very probable that first grade holdings will be steady for some time, but the increased receipts of new crop hay are bound to weaken second and third grade goods. Plentiful offerings for delivery in this market are reported from the alfalfa raising regions, but local dealers are apparently holding back in purchasing in the effort to catch lower prices later on. Weather conditions for the past two weeks have been favorable to crops, and all sections of Central and Northern California report they will have larger yields than had been anticipated earlier in the season. None of the local merchants are willing to make predictions as to the future of alfalfa market this season, the general belief is that a successful year is before the grower.

Wheat, No. 1.....\$31.00@35.00

Alfalfa, new, first cut.....10.00@15.00
Stock hay, new.....10.00@13.00
Straw, per bale.....1.00@1.25

FEEDSTUFFS.

The slower call for feedstuffs, due to the shortage in the country sections being relieved by the arrival of green feed, has been the main factor in bringing reduced prices on feedstuffs in this market, but it is also conceded that a number of speculators lowered their asking prices as the result of threatened government regulation of prices. Several notable examples of this are being reported on the street, with a prominent rice broker the man affected in each case. Alfalfa meal has shown the largest decline, and further drops on this offering are expected before the end of this week.

(Per ton, San Francisco.)

THE MARKET REPORTS

Figures Given are Independent and Reliable.
Prices Quoted as Paid to Producers.

POTATOES, ONIONS, ETC.

Most of the price changes during the past week were declines as the result of increased offerings, with one or two notable exceptions to this rule. Peas registered a sharp advance as result of an absence of fancy grades, although most of the arrivals failed to command more than \$2 per sack. Hay rhubarb was higher for the same reason. Asparagus held unchanged, although a larger percentage of the receipts were taken by canners. However, this is true every year, that as the season progresses the retail call slows up somewhat. Fancy beans from Winters have been bringing top figures. A good shipping demand again developed for potatoes, and both local and Northern old crop lines were higher. New potatoes were a shade lower under larger arrivals. Active bidding among local houses developed over new delta crop of red onions, and as high as \$2.50 per sack is being paid. Seed stock was easier, on the receipt of another large shipment from Australia.

Asparagus, per box.....\$1.50@3.25
Peas, per sack.....1.75@2.25
String beans, per lb.....6@8c
Wax beans, per lb.....5@8c

Delta reds, new, per sack.....\$2.25@2.50
Bermuda (seed), per ctl.....1.65@2.00
Garlic, lb.....1@3c

POULTRY.

Poultry offerings were much lighter this past week, but there was no pick-up in the retail call and most quotations held without change. Both large and small hens were higher, under smaller receipts of leg-horn stock. It is said that the drop in feed stuffs quotations has caused many poultrymen to hold stock that they had planned shipping into this market. One firm is reported to have closed for a case of Eastern poultry, to be delivered here next week.

BUTTER.

Butter quotations closed this week 1 1/2 cents below the opening prices, the buying support from shippers which figured so strongly in putting prices up last week having been largely withdrawn. Three cars of butter were sent East this week, but they were on government contract. No spot business of this nature was reported. Alaskan business was a partial factor in preventing further declines and Los Angeles again had to call on San Francisco to get enough butter to supply current needs. The southern city took 75,000 pounds dur-

ing the week. Storage holding of butter are still practically nil as far as permanent entries go, although there is some 100,000 pounds of short held goods in local coolers.

Thurs. Fri. Sat. Mon. Tu. Wed.
Extras.....37 37 38 1/2 * 35 1/2 35 1/2
Prime firsts.....36 1/2 36 1/2 36 * 35 35
* No session on account of funeral of James McCullough.

EGGS.

Storage activities have been lighter since last Saturday, and there has also been no Alaskan orders reported here. This, coupled with increased receipts, served to halt the upward march of egg prices and the various grades closed the week 2@2 1/2 cents per dozen lower than was paid on the opening day. Storage holdings at San Francisco are now 104,500 cases, as compared with 91,000 cases on hand at the same date last year. Two cars of eggs were shipped out of this market to Texas this week, but the differential between this market and the East is not yet large enough to bring any trading in that channel.

Thurs. Fri. Sat. Mon. Tu. Wed.
Extras.....35 35 35 1/2 * 35 32 1/2
Extra 1sts.....33 33 1/2 33 * 31 31

Ex. 1sts pul.....30 30 29 1/2 * 28 1/2 28
*No session, funeral of James McCullough.

CHEESE.

No quotable change during the past week, the only variation being a wider price range on Jack cheese. Three cars of this type were sent East and more lots are being worked on. A peculiar situation exists in that current receipts of Jack cheese far exceed those of either the Flats type or Young Americas. Market is firm on all types of cheese.

Y. A.'s.....25c
Fancy Calif. Flats, per lb.....22c
Monterey Cheese.....23@27c

DECIDUOUS FRUITS.

While there has been a marked increase in the arrivals of cherries, buying of fancy stock for Northern shipment and ordinary grades for local consumption has served to hold quotations about steady. Apricots are now offered in quotable amounts, with fancy grades occasionally selling over \$1.25 per crate. Apples were without change.

Apples:
Hellsflower, box.....Not enough to quote
Newtown, fancy.....\$4.50@1.75
do, ordinary.....1.25@1.40
Cherries, bul 12, per lb.....5@10c
Black Tartar, per drawer.....90@1.25
Purple Guigne, per drawer.....85@1.10
Apricots, per crate.....75@1.25

CITRUS FRUITS.

There were no changes in prices being paid for citrus fruits in this market during the week.

Oranges:
Navels, fancy, per box.....\$2.65@2.90
do, Choice.....2.25@2.50
Tangerines.....1.75@2.00
Lemons:
Fancy, per box.....3.25@3.50
Choice.....2.75@3.00
Standard.....1.75@2.00
Lemonettes.....1.50@2.25
Grapefruit, fancy.....2.75@3.00

DRIED FRUITS.

(Net to growers, bulk basis, f. o. b. shipping point.)
Business in dried fruits was almost at a standstill during the week, with lighter spot trading forced by the lack of supplies and slower futures activity as the result of stiffer asking prices from the growers.

Special Citrus Market Report

Los Angeles, May 22, 1917.

Fair and rather steady markets were had in the east the past week. The navel season drawing to a close and but few Valencia moving as yet, caused buyers to make fair purchases, but with the berry season full on and some early fruits arriving, kept the market from advancing except on special sizes. Locally the market remains dull. Sales light on everything. Even the best selling in a limited way. Fresher and newer fruits attracting attention from oranges. Local packers buying sparingly, but paying old prices for what few they are taking: Bidding 1@1 1/4c per pound in

the orchard for oranges picked. Grapefruit too, very slow sale at 1 1/2@2c per pound in the grove picked. Lemons continue dull at 1/4@1c per pound in the grove picked, for the best. Poor have to be sold for what they will bring.

AUCTION SALES.

New York, May 21.—Forty-one cars of oranges, one of grapefruit and four cars of lemons sold. Orange market strong on small sizes, higher on 250's and smaller. Steady on large sizes. Lemon market steady.

AN UNPRECEDENTED DEMAND FOR CALIFORNIA FRUITS.

The past has been a banner season for the fruit growers of California, and the season of 1917 holds promise of being still better. The California Peach Growers' Association announced last week that, with the exception of a few odd lots, it was entirely sold out on all varieties of its specialty. The 1916 crop of dried peaches is said to have netted the growers an average of 6 cents—about double the price obtained for the crop of 1915. Offers of 9 1/4 cents for dried peaches are already being made, it is reported. Owing to the prospective shortage in the apricot output, due to adverse weather conditions, that fruit is already soared to 17 cents. The prune crop, which, by the way, promises to be larger than usual, will likely command a record price, 8 cents being offered already. The Associated Raisin Company is reported to be offering \$105 per ton for 1917 raisins.

So that, taking the dried fruit situation in this State as a whole, it appears that the growers are having their long-delayed inning at last. As between buyer and seller the tables are now turned and it is the other fellow who sits on the anxious seat.

LOS ANGELES.

Los Angeles, May 22, 1917.

BUTTER.

Receipts of week ending May 22.....268,540
Receipts of same week last year.....361,830
The advance noticed at the close of our last review was maintained throughout the past week. The receipts, while much the same as the week previous, were lighter than the same week last year. The demand is also running lighter than a year ago, the high prices affecting consumption. It was a one-priced market up to Monday, Extra ruling at 35c throughout. Chicago advanced 1c on Extras up to Monday, while New York held unchanged. The stocks of butter in cold storage here May 17 were 95,508 pounds, or 49,176 pounds more than a year ago, but 10,674 pounds less surplus than the week before, showing a freer movement than the week previous and a willingness on the part of holders to let go at the prices, which are 10c higher than this time last year. Tuesday, under light receipts and higher markets East, the market was bid up 1c and closed firm at the advance.

We quote:

EGGS.

Receipts (railroads) for week ending May 22, 1917, 2,813 cases.
Receipts (railroads) for week ending May 22, 1916, 3,235 cases.
A stronger market and fair trading on change was had the past week. Receipts continue to run lighter than a year ago and the markets east and north were firm. In Chicago firsts were advanced 1 1/4c up to Monday. This had a sympathetic influence upon the market here. While the consumptive demand was said to have been light, there were those in the trade still willing to take eggs to put into cold storage even at present high prices, which kept the market up. The cold storage holdings here May 17 were 68,971 cases, an increase of 15,386 cases over a year ago, a good part representing storages of receivers made up of the surplus not taken by the consuming trade. Tuesday, with firmer market East and light receipts, there was more trading on call than for some time and case count and pullets were advanced 1c. Fifty cases of extras were sold at 34c and thirty cases of case count at 33c; twenty cases of pullets at 31c.

Case count.....21 22 23 23 22 22 1/2

POULTRY.

There was more life to the market the past week and the tone of the market was a little better. Receipts were very good and altogether local. But there was a better demand. Broilers and fryers were both called for more freely and are a cent higher. Heavy hens were also in good demand and steady. Light hens continue dull and weak. Roosters were slow sale and lower. Ducks quiet at last week's prices and so are turkeys.

We quote from growers:
Broilers, 1 1/2 to 2 lbs.....21@22c
Fryers, 2 1/2 to 3 lbs.....22c
Hens over 4 lbs.....18@19c
Hens under 4 lbs.....14@15c

Turkeys, light.....24@25c
Squabs, live, per doz.....\$1.50@3.00
Dressed.....3.75@4.85

NEW VEGETABLES.

The market was very well supplied the past week and the demand was fairly good for all good fresh stuff. Peas are higher under lighter offerings and so are summer squash, while onions and cucumbers remain steady. Cabbage, new potatoes and string beans are all lower. Beans in fair demand, but cabbage dull. Offerings liberal and shippers buying sparingly even at lower prices. Asparagus coming less freely and higher.

We quote from growers:
Cabbage, per cwt.....\$1.50@1.70

Special Livestock Market Report

San Francisco, May 23, 1917.

CATTLE—Arrivals of cattle about equal the demand, resulting in a fairly steady market.

Grass steers, No. 1, weighing 900 to 1200 lbs. 8 1/2 @ 9c
do, weighing 1200 to 1400 lbs. 8 1/2 @ 9c
do, second quality 8 1/4 @ 8 1/2 c
do, thin, undesirable 7 @ 8c
Grass cows and heifers, No. 1. 7 @ 7 1/2 c
do, second quality 6 1/2 @ 6 3/4 c
do, common to thin 6 @ 6 1/2 c
do, undesirable 4 @ 6c
Hay-fed cattle 1/2 c to 3/4 c higher
Bulls and stags, good 6 @ 6 1/2 c
do, fair 5 1/2 @ 5 3/4 c
do, thin 4 1/2 @ 5c
Calves, light weight 8 1/2 @ 8 3/4 c
do, medium 8 @ 8 1/2 c
Heavy 6 3/4 @ 7 1/2 c

SHEEP—The offerings of lambs and sheep are somewhat lighter this week, and the quality of the stock coming is not so good. The market is firm.

Yearling lambs 12 @ 12 1/2 c
Milk lambs 12 @ 12 1/2 c
Sheep, unshorn wethers 11c

do, yearling 19c
Sheep, wethers 18c
do, ewes 17c
Hogs 19c

Los Angeles, May 22, 1917.

CATTLE—Grass cattle now make up most of the offerings. Killers are bidding 50c lower for everything and are not urgent buyers at this decline. The beef market is quiet and killers are not anticipating their wants. But with firm markets East the country is not offering so freely at the decline. California and Arizona continue to furnish the supply and what steers coming in are in fair condition. Calves continue dull and weak.

Per cwt. f. o. b. Los Angeles:
Beef steers, 1000 to 1100 lbs. \$9.00 @ 9.50
Prime cows and heifers 7.00 @ 7.50
Good cows and heifers 6.50 @ 7.00
Calves, per cwt 8.00 @ 9.00

HOGS—Not so many coming in and choice grain fed hogs are higher and in

Asparagus, lb., local and northern 7 1/2 @ 8c
New potatoes, per lb. 3 @ 3 1/2 c
Peas, northern, per lb. 5 @ 6c
do, local, per lb. 4 @ 4 1/2 c
New onions, silver skins and Bermuda, per crate \$1.50 @ 1.60
String beans, wax, per lb. 5 @ 6c
do, Kentucky Wonders, per lb. 7 @ 7 1/2 c
Summer squash, per crate of four baskets 90c @ \$1.00
Cucumbers, per box of 2 1/2 to 3 dozen 85c @ \$1.25

HAY.

Market quiet. New hay coming in more freely and sales draggy. Some shipping demand for alfalfa from the country. Local dairy people are buying but little hay, using mostly green alfalfa. Old grain hay scarce and what little coming in selling fairly well. Receipts, 106 cars.

We quote f. o. b. Los Angeles, old crop:
Barley hay, ton \$21.00 @ 23.00
Oat hay, ton 22.00 @ 24.00
Alfalfa, northern, per ton 18.00 @ 19.00
Alfalfa, local, ton 20.00 @ 21.00
Straw, ton 11.00 @ 12.00

BEANS.

The past week was another quiet one in this market. Prices show no changes; there was no buying outside of filling some seed orders. The consuming trade keeps out of the market at present high prices, but holders are independent claiming that growers will need about all in stock for seed.

We quote from growers:
Limas 18c
Large white 17c
Small white 16 1/2 c
Pinks 13c
Blackeyes 10 1/2 @ 11c

FRUITS.

The market is now well supplied with early fruits and they are selling fairly well. Cherries are attracting most attention. They are coming in more freely and are a little lower and demand only fair. Loquats in fair demand, but as receipts are improving the market went off a little. Apricots from the Imperial Valley are ar-

very fair demand. Plenty of light and half fat hogs offering; hogs that are being forced to market by the high price of feed. Such remain unchanged. But as Eastern markets continue high, killers are compelled to bid up pretty well for all really good hogs and they continue to command a premium. California and Arizona furnished most of the supply.

Per cwt. f. o. b. Los Angeles:
Heavy, averaging 250 @ 300 lbs. \$11.50 @ 12.00
Mixed, 200 @ 250 lbs. 12.00 @ 13.00
Light, 175 @ 200 lbs. 12.00 @ 13.00
Rough docked 20 pounds, piggy sows 40 pounds and stags 40 per cent.

SHEEP—There is no change to note in this market from a week ago. Killers, while all in the market, and wanting a few muttons and lambs, were not urgent buyers. But as the Eastern markets are holding up well they are paying old prices for such as they want. There continues a lack of snap to the market, however, high prices affecting the consumption of mutton and lamb.

Per cwt. f. o. b. Los Angeles:
Prime wethers \$ 9.00 @ 10.00
Prime ewes 9.50 @ 10.00
Yearlings 10.50 @ 11.00
Lambs 13.00 @ 14.00

North Portland, Ore., May 21, 1917.

CATTLE—Only a few loads of cattle were on today's market, which sold from steady to strong prices. Demand was rather light, being mostly from small killers and feeders, large killers being out of the market on account of the heavy purchases made during the last week. All good to prime cattle are selling steady, with the highest time of the year. One load of strictly top heavy steers brought \$10.50, medium steers at \$10.15, while a load of 1050-pound steers went to feeders at \$10.00, which made up practically all the trading in the steer division. Strictly top cows sold from \$9 to \$9.25, with medium kind at \$8.50 to \$8.75. Common and ordinary dairy cows are selling probably 50 cents lower than two weeks ago, although there was a strong market on this grade today, being from \$5.00 @ 7.00; bulls are steady, with an \$8 top.

HOGS—Hog prices have advanced another 10 to 15 cents today, establishing a new record with a \$16.25 top for one load. The bulk of hogs sold at \$15.90 to \$16, with a couple of loads at \$16.10. Pigs were unchanged at \$13 to \$13.50.
SHEEP—A load of shorn, east of the mountain sheep were on the market today. Yearlings selling at \$11.00, with ewes at \$9.25. Sheep receipts continue very meager, while there is a light demand.

Living daily and meeting with fair sale. Gooseberries are steady and in fair demand.

We quote from growers:
Avocados, per doz. \$4.00 @ 5.00
Loquats, per lb. 5 @ 8c
Cherries, black Tartarians, per lb. 10 @ 13c
do, Chapmans 9 @ 10c
do, Soft White, per lb. 5 @ 7c
Gooseberries, per lb. 1.7 @ 8c
Apricots, per 4-basket crate, as to pack \$1.20 @ 1.50

BERRIES.

A steadier market was had the past week. Strawberries have gotten down to a price that canners are taking them and the market the past week showed no change in price. Receipts very good and demand fair. Blackberries are coming in more freely and are a little lower. Raspberries steady.

We quote from growers:
Strawberries, poor to choice, 30-basket crate \$.90 @ 95c
do, fancy, 30-basket crate \$1.10 @ 1.15
Blackberries, per 30-basket crate. 2.40 @ 2.60
Raspberries, per 30-basket crate. 2.50 @ 2.75
Loganberries, per case 2.00 @ 2.25

WANTED TO BUY—CANARIES—1 Coolidge Place, off Jackson, San Francisco.

WANTED.

WANTED—A furnished house in the mountains at an altitude between 2,000 and 4,000 feet for a month or six weeks from June 15; must have at least four bedrooms and one bath room; also outbuilding for garage; telephone or reasonably near telephone station, but not in town; readily accessible by automobile; attractive view and surroundings, preferably near running stream and near forest. Reply, stating rental asked, to Box 570, Pacific Rural Press.

HERDSMAN WANTED—For purebred Short-horn herd; man capable of managing herd and conditioning and fitting animals for the show ring. Apply Box 580, Pacific Rural Press.

WANTED—Young men and women to attend the Western Normal Courses—Normal and Academic. The Normal Course gives an adequate preparation for teaching, at a great saving in time and money. Academic course gives practical finish to education. Write for Bulletin "A," Western Normal, 524 E. Market St., Stockton, Cal.

EXPERIENCED, reliable couple want position, orchard and ranch, \$75, found. Box 560, Pacific Rural Press.

COUNTRY LANDS.

DEEP LOAMY RIVER BOTTOM—25 acres alfalfa, 30 wooded pasture; irrigated; big barn; thirty good cows; Vina Ranch bulls used five years. Manuel Vetter, Los Molinos.

175 ACRES, near Princeton, Colusa county. Two years in rice. This season Egyptian corn. Price right. James M. Berry, 118 West Walnut St., Lodi, Cal.

STEVENS COUNTY—Logged-off land where stock-raising and dairying pay. Free booklet. Phoenix Lumber Co., Crop Department, Spokane, Washington.

270 ACRES good grain land; no improvements; five miles to Ryer warehouse; \$45 per acre; terms. Address Owner, Box 403, Merced, Cal.

STATE, GOVERNMENT AND INDIAN LANDS—Bargains overlooked. Free New Blue Booklet. Joseph Clark, Sacramento.

Labor Exchange.

This department will print liners (not to exceed twenty words) free, one time, for farmers wishing to secure labor, and laborers wanting to get positions on farms. It is distinctly understood that the Rural Press does not undertake to vouch for or assume responsibility in any way concerning transactions which may result between employer and employee. Our desire is to bring the farmer and laborer in touch during this emergency. Copy must reach this office by Tuesday to appear in issue of Saturday following.

WANTED—Employment for self and team for months of June, July, August. J. N. Garrison, R4, Box 70, Watsonville.

Publisher's Department.

During the past week we added 208 new paid subscribers to our list. We believe

this week's issue will be of particular value to new as well as old subscribers. The special articles on fruit, agriculture and livestock—the editorials and queries and replies, the markets, as well as other features, make this edition well worth the price of two cents per copy.

"I find the Pacific Rural Press the best farm paper printed. Quite often one issue is worth the price of a year's subscription."—W. M. Rickard, Sebastopol.

Have you secured a copy of the book, "Second Thousand Answered Questions in California Agriculture." This book is needed every day on your ranch. Price, \$1.50 postpaid, this office.

Enclosed you will please find \$1 for one year's subscription to the Press. One year ago a fellow somewhat seedy in appearance walked over my ranch and found me at its farthest point. I wanted a good farm paper, published on the Coast (as I was but a few years from the East). I looked him over, gave him a dollar, with a doubt if I would ever see any paper. I have carefully perused every number and it has been universally read in my office and I must say I think you are giving more for the money you get—more real intelligent help to your patrons, whatever their line may be—than any other paper I have ever taken. And you are heart and soul with the newcomer to put him right; and the last six lines of your editorial in May 19th issue strikes me as the most sensible expression of the farm hegira that I have read. Go to it in your good work.—A. E. Clutter, Los Angeles.

SAVE EXPENSE

Be a business farmer—use time saving devices—make more money out of your land, your labor, your time.

The Yuba Ball Tread Tractor plows deeper, quicker, at less expense—harrows, discs and cultivates at the time when the soil needs it most—it gets the job done.

There's greater demand for food—you should take advantage of it and cultivate more acres better and quicker—make hours count for days.

Write for the Yuba Ball Tread Tractor catalogue—telling us how many acres you have.

STANDARD OIL COMPANY
(California)

CALIFORNIA LAMBS AT LOWEST POSSIBLE COST.

An observant stranger has been among us. He came, he saw, and carried away with him some decided convictions. This stranger was Eugene Grubb, the world-famous potato specialist. But Mr. Grubb's vision extends beyond the potato field out into the expansive stock range. Speaking to an interviewer in Chicago after his recent visit to California, he remarked with some enthusiasm that California had advantages of feed and climate for lamb production unrivaled anywhere else in America. He said that the sheep and cattle of Australia and Argentina had been depleted by drouth and the heavy demand. In California sheep do not suffer from stomach worm as in the Middle West. Climatic conditions in this State make it possible for ewes to drop lambs in November and December, that run on grass during the winter, and milk lambs are ready for market in March, April and May—coming in ahead of the Tennessee and Kentucky crop. The cost of their production is so low as to defy competition.

Turlock People Working Out the Labor Problem

[Written for Pacific Rural Press.]

A CALIFORNIA hobo said with some truth that he had to quit his job to get a bath. Over 1,000 carloads of cantaloupes were lost in the Turlock district last year for lack of labor at harvest time. Still, we scarcely believe the hobo had quit work in that district, for a free swimming pool, with dressing rooms and running water, was established by the people of Turlock last year. As W. T. Winter says, the hot weather makes a fellow sweat and cake up with dust so he wants a bath at noon, and needs it every night. That is why David F. Lane, general manager of the Turlock Merchants and Growers, urges each farmer to spend five dollars, if necessary, to run a pipe from the discharge of his tank through the side of the tank house and cap it with a tin spray to give the men a quick shower bath when they are hot and dusty. It will make them more efficient and they will stay longer. A slatted platform and a canvas curtain around it would be desirable.

BOARD OF TRADE EMPLOYMENT AGENCY.

Last year, says Mr. Lane, they could have used 500 more men at Turlock. Early in the season many farmers came to the T. M. and G. with their tales of labor shortage. The Turlock Board of Trade was converted into a free employment agency. Secretary S. T. Webber of that body placarded the store windows and streets; the local papers published the announcement; and the first day the Board of Trade rooms were overrun with men seeking work. By the next day farmers began coming or phoning in for them; the third day all the laborers were placed and Mr. Webber began pleading vainly with the two or three score loafers around cigar stands to help the farmers. That's the class that ought to be drafted first into hard work, for they would make poor soldiers.

SLEEPING QUARTERS TO ATTRACT HELP.

In March of this year the situation promised to be far more serious, for it seemed that the cantaloupe crop would double last year's shipments of 3,522 cars from the Turlock district. So the Board of Trade appointed a committee to prepare in advance to attract real workers to Turlock. Plans made by the G. W. Hume Co., canners at Turlock, whose increasing output requires more dependable and permanent labor, have materialized into the colony of 21 neat \$450 houses and children's playground. Each of the houses has two rooms, plastered and wainscoted, fitted with gas, electricity, running water, and is fitted up for light housekeeping. Shower baths and toilets are provided. The Board of Trade committee has proposed a ridiculously inexpensive set of sleeping quarters to house 100 men per night, and a similar set, under a competent matron's supervision, to shelter 120 women—all to be ready before cantaloupe harvest.

Mr. Lane describes the proposed men's quarters about as follows: The rooms are to be about 6x8 feet, screened on all sides above three-foot

walls. These walls are to be eight inches above the floors, which will be sloping. They will not be swept out, but will be flooded out by water under pressure, so inmates will not leave their belongings on the floors. A lockable wardrobe is to stand in one corner. A small room will be used to fumigate blankets, and everyone must take a shower bath before using a room. The charge will be about 10 cents, but the occupant will be offered and must take work within twenty-four hours, so bums will not be encouraged. The lodging place is designed to attract workers to

Turlock. Shower baths will be free; also handball and tennis.

A free employment bureau will be operated in connection. Farmers will notify the agency of their needs, and men will be sent or taken to the work. Last year farmers took men several days ahead of their needs in order to be sure of them, and made satisfactory arrangements for their idle time. This is unlike the Santa Clara farmer who laid off a crew because cool weather had prevented his fruit from ripening, and after warm weather came that night scoured the country for another crew.

BETTER QUARTERS REQUIRED.

With California farmers depending this year much on city folks, high school students and others accustomed to sleeping on beds, it behooves everyone to provide something as cheap and sanitary as possible. The ones proposed above, or even cheaper, can be put up at slight cost on short notice on any farm. For more permanent quarters, C. J. Colburn and W. T. Winter have good samples. Most everyone in this district has a water tank on a tower or tank house. Mr. Colburn's is a tall one, the tank being set above a room about 12 feet square, which is over the room used for separating milk, washing dairy utensils, etc. Two regular men sleep in the upstairs room, which is nicely floored and reached by a good outside stairway. A window and door on one side and a window on another make this room much more desirable than one on the ground floor. The extra cost of stairway and floor, including labor and material, was not over \$20. Such a room may be made as attractive as the men wish.

A more elaborate outfit is provided on the Winter ranch. Mr. Winter's son and daughter lived in the nicely floored and wainscoted ground-level room

under the 3,000-gallon tank for quite awhile. At another time, a laborer was housed here instead of letting him go to the barn. It is now used as a wash room, but will be cleaned up and furnished with cots for men during hay harvest.

High up on the south side is a metal tank holding perhaps 150 gallons. Water runs into this from the main tank and warms up in the day's sunshine. A pipe conveys it to the shower bath in a 5x10-foot lean-to on the north side of the tank house. Here is also a patent toilet and a

(Continued on page 681.)

Upper: Middle story of tank house made the most comfortable room on the C. J. Colburn ranch. Fitted up at small cost for two men who work here steadily. Hired help in this district is generally well provided for. Temporary quarters for unemployed labor are proposed by the Turlock Board of Trade.

Lower: Some of the 21 cottages being built for the G. W. Hume cannery at Turlock to attract and hold a good class of helpers through the season. A matron will take charge of all children in the commodious, well-equipped playyard in foreground. Shower baths and all sanitary conveniences furnished.

FARMERS ON DEFENSE COUNCILS.

THE convention of real farmers held in this city last week passed a resolution expressing a conviction that the millions of their sort of people ought to be represented on the National and State Defense Councils by members of their own kind in addition to the farming approximations now sitting thereon. We thought of making that claim some weeks ago when the membership of these Councils was first announced, but passed up the thought when we reflected that if the real farmers wished for representation they should make their own call for it. Besides, we are a little scared about this whole war business. It makes us shiver to remember how many hyphenated subscribers we lost when we promptly denounced the Kaiser for his outrage on Belgium and we have no desire to offend the defending Councils by swinging to the other extreme in questioning their representative characters. It would make us very sad to be forced to study the sea gulls through the bars at Alcatraz fortress and to be denied even a pad upon which to inscribe these paragraphs—so comforting to ourselves and so distressing to our readers. In fact, we are timid of Mars in all his manifestations. But as the real farmers have risen in their own behalf and called for their representation, as such, on these great Councils, we cannot be so slack as not to insist that they are right in making such a demand. And our wonder is that the oversight which made it necessary for them to do this could have possibly occurred. It is a surprise that the country's need of increased food production should be proclaimed first and greatest of all her needs and not a man or woman directly doing such production called to the Council to plan for and promote it. It is also a little humiliating that the real farmers should need to proclaim their relation to the defense of their country, but it had better come that way than not at all. The fact seems to be that, though other classes may view their farming fellow citizens with appreciative complacency and even bestow upon them genuine and generous cuddling, they are quite apt to overlook the masterful citizenship of the American farmer, not through discriminating design but because of their own excess of self-consciousness. If this be the case, then self-assertion on the part of the farmer seems to be the only avenue to recognition of his civic standing.

COUNCILS PRESUMABLY REPRESENTATIVE.

WE ARE not suggesting that farmers deserve different consideration than other citizens because they are farmers. There might, of course, be alleged an argument that their vocation is more basic and indispensable than others and therefore, etc.—but we are not following that line now. The point we make depends upon the presumption that appointments to Councils of Defense were made because those honored were not only good and true citizens in themselves but because they represented something. For instance,

in the published list of the members of the State Council of Defense there are two representatives of organized labor, to which we are not at all objecting, and there is one described as a "farmer," but he is rather better known for his love of statesmanship than of the soil. We recognize others, of course, as owning land and sometimes gaining and sometimes losing by the performance of land, but farming is not the activity in which the State at large knows them, nor do they live a farmer's life upon the land they own. But it may be claimed that these persons are just as near to real farming as the labor representatives are to real labor—but we brook no such scoffing in this discussion. If we concede that near-farming and near-labor are equally represented, we still have the main contention untouched. Again, the personnel of the Council is overwhelmingly from the large towns—the country town and the whole country-side being practically unrepresented. For this reason also we are inclined to approve the claim made by the farmers, as cited above. We would feel much better about it if two or three more members had been called from their homes on farms, orchards and vineyards to take part in the councils of the State. In the pursuit and conservation of certain public interests, citizens from such life and environment must be more experienced and wise and not less devoted and patriotic than those who have been already called to honorable service.

HOW REAL FARMERS WERE PASSED OVER.

WE ARE not contending that any loss or danger has been incurred by the oversight of provision for direct farming representation on Defense Councils. There is nothing in the fact from which the enemy can take either aid or comfort because the farmers will do their duty to the limit, even if they had nothing to do with the definition of it. Nor are we suggesting that the omission of farmers was designed or intended by those making appointments for systematic defense. The whole explanation of the omission is simply this: real or actual farmers do not rise in the public eye as entitled to representation. In the public view representation of near-farming is just the same as of real-farming—and the public is not to blame for lack of insight, because it has not been trained to discrimination. And who is to blame for this lack of training? The real farmers themselves, of course, and none other. On the other hand, who is to be credited with the fact that organized labor is so amply represented? None other than the laborers themselves, who organize for just this purpose: the recognition of the interests of labor in the public mind—for all the advantages they have secured, individually and in groups, have followed as corollaries of the main proposition. In the promotion of their contention for a place in the sun of public recognition labor organizations have developed initiative, confidence, self-reliance and resources of their own. We do not hesitate to credit labor organizations with the embodiment of the true American spirit, as no other element of our industrial citizenship has secured it in organized form—even though they have in too many instances done things which are un-American and inhuman.

SELF-HELP AND DONATION.

IF WE had space we would like to review the efforts at organization by farmers and by laborers during the last half century and to try to explain why one group had failed of the goal and the other so fully arrived. We have convictions on that question from close observation of the two groups of efforts during the period indicated. We may hold forth thereupon at some other time. Just at the moment, and like a school master, we declare success on the one hand to have been due to the possession of business sense; and failure, on the other hand, to have been due to the lack of it. Take this parable:

There were two preachers who went forth to preach. Both were full of grace and love for the souls of men, and both found fields for work. One figured closely and self-denyingly the needs of his family and carefully the resources of the parish and declared that he would preach for \$600 per year. The other said that as it was the Lord's business, he would set no price but would preach

for what was provided. So they promised him \$400 a year and a "donation." And the seedtime and the harvest were the first year and the winter approached. The preacher who had set his price had collected his due, laying beside him in store dried apples, spuds and cordwood, when offered in lieu of cash, and balanced his account with his parishioners. The preacher who trusted the Lord's people to provide received \$200 in cash during the year, always with promises for making up deficiencies at the "donation." And all the people came at length to the "donation" with appetites fresh from the whetting: each family ate what another had donated, and whatever else the parsonage pantry possessed besides—leaving, as the net income of the donation, a few inedibles and unwearables, sight of which caused the preacher's wife to weep.

Obviously the unbusinesslike preacher typifies the farmer who ministers to public needs for whatever return the public provides, and in the end has neither dried apples in his attic nor spuds in his cellar and he hauls all his cordwood to town to pay his taxes. To him, in compensation for such lacks, there come, however, "donations" of good advice, inviable seeds, favors which he should have secured as rights, loans to replace profits which he should have insisted upon as a fundamental factor in production—and all that. In all such ways are manifested the farmers' lack of business sense, and as a penalty thereof they can show neither initiative, self-confidence nor resources of their own and naturally have never gained recognition as representative of anything real and independent in the world. Still they must minister and when a situation arises in which it seems necessary to public spirited citizens that, for public supply and safety, they should publicly state their needs and convictions, they are offered the cost of traveling to such assembly by a generous wholesale grocers' association—which, however, about half of them creditably refused to accept. When, then, it is asked why the real farmer is overlooked as representative of anything, the answer must be: because he does nothing forceful and businesslike for himself: because he is too willing to work as long as he can by public grace and donation.

DEAN HUNT ON WAR NEEDS AND DUTIES.

BUT NOW, to the reader's relief and our own, we break away from this sort of preaching and take up something very concrete and suggestive, and that is a special circular issuing from the College of Agriculture this week giving in a preliminary way some of the conclusions by Dean Hunt, based upon a special inquiry under his direction which was made by eight visiting parties which conferred with farmers in nearly all the counties of the State during the last two weeks of April. It is a 20-page circular, the possession of which requires only a postal card application to the college at Berkeley. Those who have read the several utterances by Dean Hunt which have already appeared in our columns, and which have conveyed many of the facts and lessons collected in this circular, need to be told of the seriousness, in fact almost solemnity, with which he is himself rendering the patriotic service which he impresses upon others. Our readers who send for the circular will find the reading of it something of a relief from the levity with which we approach profound issues: in fact, we find it such a relief ourselves. In order that the reader may have in a nutshell the convictions of duty and opportunity which Dean Hunt derives from his profound contemplation of fact and lesson disclosed by the inquiry, we give his conclusions concerning the tasks which lie before the Committee on Resources and Food Supply, of the State Council of Defense, as follows:

To bring the labor resources of the cities in touch with the labor needs of the country by a family to family canvass of both city and country and to act as a clearing house for this information.

To organize tractor garages or similar methods of giving the farmers more power.

To urge city capital and city people to engage in the production of food in the open country, particularly on those lands on which water has recently been made available.

To further promote plans of meeting the livestock situation and to promote a larger use of the abundant supply of fish which can readily be increased.

To furnish organizations of women with information concerning the conservation of food and the elimination of waste and to impress upon them

the great possibility of promoting economy in food and clothing and in eliminating such indulgences as are not strictly necessary to the best welfare.

To assure the producer that whatever food control may mean that prices of food products can not appreciably decrease in the next two years, and to warn the consumer that the sooner he adjusts himself to the present or higher scale of prices the better it will be for him and for the cause for which this country is fighting.

The solemnity of Dean Hunt's view of the situation is, however, not shown by his category, but by his own aspect of it. In concluding his circular he writes this:

And now, finally, the pity of it all is that very little attention will be paid to most of these recommendations. There will be in the hands of the American public during the next two or three years more money and instruments of credit per capita than there ever were in any nation of the world, and there is every reason to believe that this country is to witness the most prosperous times and the most riotous living that it has ever known. In the meantime it is our allies who will suffer. "For what shall it profit a man if he shall gain the whole world and lose his own soul?"

PRICE-FIXING THE PRODUCERS' DEFENSE.

OF COURSE, Dean Hunt is right that there is danger that America, in the flush times which are surely coming, may lose its own soul by greed and indulgence while saving allied nations by abundant food and munitions. It is

the duty of every man to safeguard his soul and we hope he will do it by religious devotion and righteousness. To us the chief present danger to the farmer is not of losing his soul but of losing his crop, while other men are imperiling their souls by greed, falsehood, speculation and speculation. Although some productions will be high everywhere and others will remain high somewhere perhaps, there appears to us imminent danger that two things may happen: first, that speculation may gather inordinate profits in distribution of products capable of long movement; second, that local oversupply of heavy and cheap products may cause loss to producers who have responded too actively to the spur of stimulation. We can see in government control of minimum and maximum prices the only safety of the producer from loss, and the consumer from extortion. If the farmer has to pay more for taxes and for everything he buys, including labor, he must be assured not only that prices will cover the outlay, but that he gets his fair share of the price which the consumer pays. When the farmer becomes his own distributor and price-fixer, if that day ever shall arrive, he may protect himself, as manufacturers do, but as things now are we see no safety for him except in the assumption by the government of the function of price-fixing, as outlined by President Wilson in our last issue.

they are, fully grown, when they make earthen cocoons in the ground and transform into long, slim beetles which are called skip or click beetles, because they snap themselves over when laid upon their backs. There is nothing to do for the pests now. They have probably already done their worst for this year's crop. As soon as you get the corn off, plow up the soil dry, leaving it rough to dry and burn in the sun as much as possible. Put on barley or some other grain next year and this will clean the ground of these pests so that their injury to corn will not be noticeable until they have time to multiply again. Rotation of crops is the best way to escape them.

Sudan Grass Hay.

To the Editor: Can you inform me through your columns, the proper time to cut Sudan grass for hay and the method of curing, and what quality of feed if properly cut and cured?—E. L. W., Hopland.

The grass should be cut for hay when in full bloom. It is handled like other hay. Readiness for putting in cocks and curing in cocks before stacking or putting in the mow will of course depend upon the local conditions of moisture in the air. Local practice will therefore be about the same as for handling other rank-growing and thick-stemmed hay plants. In good hay weather, one or two days flat and three or four days in the cock will make it safe to stack, but the grower must use some judgment of conditions, of course. Feeding value of Sudan hay is about the same as of other grass or coarse grain hay. It will support work stock. It is inferior to alfalfa and other clovers for growing animals and for dairy cows.

To Hit Aphis and Codlin.

To the Editor: My apple trees are slightly infested with brown aphis and as I am going to spray with arsenate of lead, would like to know if there is anything I could add to the spray to kill the aphis without injury to trees or fruit.—Subscriber, Los Angeles.

You can add one pint of 40 per cent nicotine tobacco extract to 150 gallons of dilute arsenate as prepared for spraying.

Wireworms and Salt.

To the Editor: Please tell me what to do for wire worms in cabbage? They eat the outside and inside of the root, just leaving a woody strip and are killing a great many plants. I would also like to know about salt as a fertilizer for soil.—Subscriber, Tolhouse.

Nothing can be done by trying to chase a wireworm to its lair in a cabbage stalk which would not kill the plant. You must plant next time on clean ground or clean up your old ground by summer plowing and grain growing. Salt would kill a wireworm if you got it on his tail, but it would also kill all plants it reached in sufficient quantity. All such warfare upon wireworms has failed. Salt is not a fertilizer at all. It is a plant poison.

Summer Spreading of Manure.

To the Editor: I expect to finish cultivating my peach orchard about July 1st, and am thinking of spreading the manure that has accumulated since I last hauled out in February rather than leaving it in a pile behind the barn as usual. Will the direct rays of the sun take the strength out of the manure lying spread in the usual way any more than it will in a small pile? Or can it have any bad effect on the trees if not spread too thick?—H. N. H., Sanger.

It will not hurt the manure. In fact, it is likely to be better preserved by drying than by keeping in piles where it runs the risk of quick fermentation and loss. It will not hurt the trees. It may help them by preventing loss of soil moisture by evaporation during the long summer and autumn.

California Weather Record

The following rainfall and temperature record is furnished the PACIFIC RURAL PRESS by the United States Department of Agriculture Weather Bureau at San Francisco for the week ending at 5 p. m., May 29, 1917:

Stations—	Rainfall Data.		Temperature Data.	
	Past Week.	Seasonal To Date.	Normal To Date.	Max'm. Min'm.
Eureka02	31.27	44.84	54 46
Red Bluff	1.30	19.24	24.61	76 48

QUERIES AND REPLIES

Inquirer Must Give Full Name and Address

Moles in the Garden.

To the Editor: I have an animal in my garden which acts something like a gopher except that sometimes it goes along under surface and breaks up the ground enough to see its trail. How can I catch it? It ruins the young vegetables.—P. S., Oakley.

It is a mole. Nature lovers exhort gardeners to enjoy having a mole because it is his nature to eat ground-pests like mole-crickets, etc., and because he does not eat plants. But we do not like a mole any better than you do. The way they upset plants and destroy a young lawn is very exasperating. As to a mole being really a friend of the gardner, we would rather have several enemy gophers than one friendly mole because we can rid ourselves of them more easily. You cannot poison a mole because he will not eat fruit or vegetable baits. It is easy enough to get a mole if you happen to have a spade, or some other weapon, when he is humping up the surface. Nature will tell you how to do that. But our experience is: that a mole very seldom decides to work when we decide to watch—and then while we get busy at something for a few minutes he will run a hundred feet in soft ground and we will get back just in time to see the streak and the upset plants. A mole makes us madder than a gopher does and gets us nearer to the swearing line. The seedsmen have mole-traps which will work well when the animal comes back the same way—which he may decide never to do. It is that way with a mole which is "somewhere" in our new lawn at this moment.

Nitrate and Superphosphate.

To the Editor: What is the best time of year to use nitrate and superphosphate in orchards, and what deficiency of the soil does it supply? What quantity will be effectual per acre?—A. L. H., Arbuckle.

As both products named are soluble and therefore readily available, the theoretical time for application is a little in advance of the active growing season of the plant to which it is desired to minister. This is subject to some modification owing to the fact that though both are soluble they differ in their attitude toward soil water. Superphosphate is not readily leached from the soil while nitrate is quite disposed to go with the water and out with the drainage or too deep for the feeding roots of the plant. Therefore superphosphate can be applied in the fall without fear of loss, but nitrate, except for plants which are active winter growers, should be applied after heavy rains are over and spring growers ready to

use it. As for quantities per acre there is variation according to the conceived conditions and needs of various plants, but roughly it may be said that basic amounts would be something like 400 pounds of superphosphate and 200 pounds of nitrate of soda per acre. These amounts may be often considerably increased to advantage, but there is more danger of excess with nitrate than with the other.

When to Cut Grain Hay.

To the Editor: Please tell when these things should be cut for hay: Sowed barley or oats, volunteer barley and oats, and volunteer oats. Also what condition is best for horse hay and for stock hay and for baling.—R. V. R., Newark.

We are not aware that weighings and analyses have been made in all these cases to show how maximum crop is related to maximum nutriment and digestibility. What standards we have are from judgment and experience and interpretations of such observations do not fully agree on conditions to meet these two ruling requirements, viz., to get as much weight as you can and still have it eaten up clean by the animals. Roughly, there is a consensus of opinion that there is most and most widely distributed nutriment secured by cutting when the grain is in the "soft dough," or, as some put it, "between the milk and the dough." In the case of mixed grains, of course, one often has to hit a compromise: allowing one, perhaps, to get a little too ripe in order to save the other from being too green: trying to get the most abundant in the mixture as near as possible to its best time. It is usual to cut a little riper for horses than for horned stock. For baling more attention is given to the condition of curing than of cutting, for if sufficiently freed from excess moisture anything can be safely baled.

Corn and Wireworms.

To the Editor: I am sending you a piece of a root-stock of corn and about 30 worms, which I found eating it. What kind of a worm is it and how to get rid of them? They have destroyed about one acre of corn out of 20, and seem to be multiplying very fast. They start by eating up the top root, and then cluster on the stock just under the top of the ground. They also eat the eyes out of our young vineyard cutting.—G. E. B., Sanger.

They are wireworms, an old pest of the corn plant, for which many remedies have been suggested, but none of them widely efficient and practicable. They often begin by eating the sprouting seed grain and continue eating roots until

What the Government Will Do for Fruit

J. Clifford Folger, assistant fruit crop specialist of the U. S. Department of Agriculture, has prepared a statement outlining the future work of the Government in the line of fruit crop reporting. He says:

"The growing importance of the commercial fruit industry in the United States, the development of highly-specialized districts devoted to the production of fruit crops, and the distribution of these crops into extended markets, all emphasize the need for a more careful study of the so-called commercial production, with a view to a more complete forecast of the probable quantities of different fruits which will be placed on the market in any given year."

WILL BEGIN WITH APPLES.

For the total agricultural production of apples as well as all other crops, a complete system of forecasting has been perfected which includes reports from every township of agricultural importance in the United States. In the past the estimates for the agricultural production of apples have been secured from four separate and distinct sources, each more or less complete and acting as a check upon the other three. They are as follows: (1) The above-mentioned list of several thousand apple growers who have been furnishing periodic information in response to inquiries relating solely to the apple crop. (2) A voluntary crop reporter in each township who reports monthly to the bureau on the crops of his neighborhood. (3) A voluntary reporter in each county who also reports monthly for the entire county, basing his reports upon personal observation, interviews, and upon reports from farmers and others in different parts of the

county. (4) A salaried field agent in each State who spends most of his time, during the growing season, traveling over his respective territory and keeping in intimate touch with crop conditions.

PLANNED EXTENSION OF WORK.

This general system of crop reporting is designed more particularly for field crops, grown generally throughout an entire State or number of States. Commercial fruit crops are highly specialized and their cultivation is concentrated in particular regions. For this reason they do not lend themselves as readily to a general system of crop reporting. Recognizing this fact, the Bureau of Crop Estimates has added to its working force two fruit-crop specialists who will give their entire attention to perfecting a system for estimating the commercial apple crop. Once perfected, this system can be extended to include other fruits.

The fruit specialists will visit important districts and confer with apple growers, dealers, growers' and shippers' organizations, and others interested in the apple industry. Support and co-operation will be enlisted in the work of making reliable forecasts from month to month on the size of the crop and in collecting information on the general conditions throughout the country during the growing season. By this plan it will be possible to carry to those interested in apple yields information regarding not only the entire crop as a whole, but also regarding the crop of a particular state or district. By gradual development it will be possible to work up a uniform system of estimating, which will render the greatest service to the commercial fruit industry.

Concrete Unaffected by Sulphur Fumes

[Written for Pacific Rural Press.]

"Our concrete sulphur houses have been entirely satisfactory two years," says Fred W. Wilson, formerly of the Winters' Dried Fruit Co. "Two of them still show the grain of the boards used as forms for the concrete, though the other has crumbled slightly from use of steam to bleach almonds in it. They are absolutely fire-proof, and I think they require less sulphur than wooden 'bleachers.' Wood shrinks, and cracks let sulphur fumes escape. Meat smoked in the wooden sulphur house tasted some of the sulphur, but not so in the concrete one."

Mr. Wilson's old wooden sulphur houses had rotted at the bottoms and settled out of shape. The men on the ranch built concrete ones during leisure time, using six parts gravel to one of cement. Foreman B. F. Chadwick tells the cost: \$139 for cement, wire, men, and lumber. Three compartments join each other so one inner wall serves for two. Each compartment is 15 feet by 6 feet 4 inches by 40 inches inside—long enough to take two tram carloads of fruit at once. They have a cement roof, and cement floor with iron rails imbedded in it. Sixty-five sacks of cement were used at 65 cents per sack. Thirteen yards of gravel were hauled from the creek nearby. A thousand feet of 1x6 fence lumber was used for forms, and this was

useful afterward. One bale of 20 rods of new 26-inch woven wire was imbedded in the concrete as reinforcement. Old iron rods, etc., helped reinforce the roof. Walls and ceilings are six inches thick, and the floor nearly so. Making the wall too thin is a mistake if it weakens it, says Mr. Chadwick. Two one-inch pipes through the ceiling of each compartment furnish ventilation enough so the sulphur fire does not go out. A pit was left at the front end about 14 inches square and eight inches deep for the sulphur. Bolts through the walls hold 2x3's vertically, to which 2x6's are fastened horizontally for trays to rest on. Wooden doors swing up to a hook hung to a projecting 2x4 on each compartment.

PROTECTS AGAINST SULPHUR.

How to sulphur trees and overhead vines without getting the irritating stuff in one's eyes is told by a Marin county subscriber who has two acres of fruit and grapes, including an overhead arbor which he sulphurs from beneath. Paper was pasted over the gauze around the glasses of common threshers' goggles. To keep sweat from carrying sulphur into his eyes, he put on a woolen night cap, drawing its edge down over the upper edge of the goggles. It absorbed the sweat.

Here and There in the Fruit Business

Grape Vine Hopper Remedy.

[Written for Pacific Rural Press.]

Grape vine hoppers are likely to be serious in San Joaquin county this summer, according to Horticultural Commissioner H. H. Ladd. They have already been observed on all varieties, and unless treated before developing wings they will defoliate vines more or less, especially of late varieties, such as Emperor and Cornichon, and expose fruit to sunburn. Eggs are pierced between surfaces of leaves. They hatch about blooming time and the young live on under surfaces until wings develop. Therefore, a spray to catch them needs to be applied under 200 pounds pressure with angle nozzles to wet the undersides of leaves thoroughly. Spray does not get them after wings develop. Mr. Ladd recommends a spray he tried on half an acre last summer with good results. Twenty pounds atomic sulphur mixed with 1½ pints blackleaf 40 per 200 gallons of water does the work. The atomic sulphur serves as a spreader for the nicotine instead of soap, and controls mildew also.

Lime Softened Hard Red Orange Soil.

[Written for Pacific Rural Press.]

The red adobe-like soil of certain orange districts in Butte county requires immediate attention at the right time to make it work down soft and loamy. Some of it is worse than other; but lime will improve it as evidenced by C. J. Dreher's experience. In September, 1915, he broadcasted with a shovel, four tons of beet sugar lime per acre on 20 acres and cultivated it in. The soil worked so much easier and cover-crops grew so much better that lime was spread on other orchards last summer and still others last fall after thorough cultivation. The usefulness of lime depends on getting it cultivated or soaked into the soil it is to soften.

Almond Growers Strong.

[Written for Pacific Rural Press.]

California almond growers are greatly handicapped in competition with Spanish almond growers, both in cost of labor and freight rates to New York, said G. W. Pierce of the Almond Growers' Association at the farmers' meeting in San Francisco, May 22. Yet the association insists on reasonable prices to consumers.

Spanish labor costs about 60 cents per day as compared with \$2 or more here. The freight on Spanish almonds delivered in New York is 27 cents per hundredweight, while from California it is \$1.40 and the railroads are wanting it increased to \$1.61. Yet, due to the association, the almonds are sold at such a profit to producers of California that the planting has greatly increased.

Better Cherry Packing System.

[Written for Pacific Rural Press.]

What seems a better system for cherry packing is being followed in Yuba City as suggested by R. W. Skinner. In ordinary packing, a lot of cherries are piled on the tables; and these are picked over perhaps half a day before they are all cleaned up. The best fruit is used and the

other left for the last boxes packed. By that time it is more or less messy, sticky, bruised and broken. If some of the last boxes packed each day happen to be opened at auction as samples of the whole lot, it all goes begging at low prices. If the good fruit is opened as a sample, then the buyer has a kick coming. Cherries that stand over night or over noon in a pile or a lug box get sweaty and should not be packed in that condition. To aerate them and dry them out, and to make each box as nearly as possible of equal quality with every other box, is the object of Mr. Skinner's system.

The forelady, Mrs. Stoker, fills the cherry shipping boxes directly from the lug boxes, removing sticks and trash that might injure the fruit. This handling aerates the cherries. She puts in 10¼ pounds, more or less, to allow for culls; weighs the fruit and sets it on a shelf where each packer comes to get it when her previous box is finished. This gives the packer a relief from her sitting position, and if there is anything wrong with her pack the inspector can tell her privately.

The box must be packed from the 10¼ pounds; so it is packed with average fruit and the table is practically cleaned up every time.

Killing Apple Aphis.

To the Editor: I see in your last two papers inquiries as to means of getting rid of the apple aphis and both times you recommend whale oil soap and nicotine 40 per cent. It has been my experience that the above is absolutely worthless. Two of the most successful growers in this district told me last week that they bought more than \$200 worth of tobacco extract four years ago and sprayed the trees thoroughly with absolutely no gain whatever. We find the lime-sulphur solution (nine to one) applied about the last of February or early in March (depending on the year) to be very effective. While I don't contend that this will get them all, I am positive that it will control and check them so their damage is very slight.—W. M. R., Sebastopol.

The case is this way: Instead of spraying with lime-sulphur just before buds open, as you describe, our friends do nothing until the leaves get lousy. Then they write to us in a great rush and we have to tell them in April and May what it is safe to do then and that is to spray with a soap-tobacco wash. If we reply that they are stupid not to have sprayed with lime sulphur a month or two earlier, it would make them mad enough to stop their papers. However, we let you tell them what we were afraid to tell.—Editor.

Bluejays and Almonds.

To the Editor: Can anything be done to prevent bluejays carrying away almonds? The trees are along a slough and the birds take every nut. The trees are loaded with almonds this year and I would like to save them.—C. B., Snelling.

We know no way but shooting, and this would cost more in time and munitions than the nuts are worth when you have only a few trees and a great many jays. Can any reader prescribe from successful experience?—Editor.

Practical Hints About Farm Labor

[Written for Pacific Rural Press by Wm. Curtis Clark.]

The fact seems to be generally recognized throughout the State of California that there is at present an unusual shortage of farm labor to handle the crops of the present season. An organization, providing means for handling a serious situation of this nature, has before it a task involving careful planning and the assumption of considerable responsibility. It is unnecessary to say that it requires straight thinking and a practical appreciation of the factors involved. To these every employer of farm labor in this State should give his personal attention and consideration.

FARMERS TO HAVE A NEW KIND OF LABOR.

In the past a farmer has depended for labor upon the so-called "floaters." This labor has been recruited largely from the ranks of tramps, hoboes, blanket stiffs, b-hunks, men who are employed in other occupations in other seasons of the year, and groups of men, women and children taken from the cities for special hand work, such as thinning, picking, packing, etc.

It is evident that a large portion of the force formerly depended upon comprising able bodied men, are now going to be drafted into various branches of the Military and Naval service. This is going to logically require the recruiting of ranch labor during the harvesting season, from a class of persons not heretofore utilized.

The reasonable source of this supply exists among the active element of our colleges, high schools, public schools, and among the women of our cities who are free to devote themselves to this work.

It is quite evident to California farmers that if this work is going to be organized and carried out under the authority and supervision of such institutions as the University of California, the State Labor Bureau, or the State Department of Education, there will be imposed upon any of these institutions who assume this responsibility, a liability in regard to the proper carrying out of their plans.

It is also evident to California farmers that if a practical plan for the solution of their difficulties is carried out by either of these institutions, they will of necessity have to be assured that the labor, for which, to a certain extent, they are responsible, shall be properly housed, fed and supervised, and that this labor will have to be placed specifically and definitely on the work for which it is ordered or required.

This means, that the so called "Labor Hog" who has been an objectionable factor in the placing of labor heretofore, will have to eliminate himself or be eliminated from the situation.

OLD METHODS UNFAIR.

The "Labor Hog" has heretofore been a definite and known quantity with labor bureaus, both private and public, and has always formed a factor with which labor bureaus have had to deal. The Labor Hog is an employer who has a crop maturing and necessitating the employment of a large number of hands. For example, he may need a force of twenty

(20) but, being apprehensive that he will not get this number, or that a certain percentage of hands will quit, places an order for forty, in order to have a surplus stranded on the job from whom he may draw at will, as the necessity arises. This produces a very comfortable feeling no doubt, and offers a certain temporary relief from embarrassment as long as the surplus labor remains in the locality to which it is sent, but it produces an unfair burden upon the labor so manipulated and abused, and performs a great injustice.

Such a condition of affairs must be eliminated from transactions involving the placing of high school students and other labor neither accustomed to finding itself stranded, nor to picking up a living in tramp fashion.

Whatever detailed method may be used by some responsible Association, it is going to be necessary for the farmer to specifically state his exact requirements, a certain definite piece of work to be done, involving as nearly as possible a particular length of time, and that he assume the obligation to provide for the required amount of help ordered, in a more definite manner than in the past.

LABORERS MUST BE BETTER PROVIDED FOR.

2nd. It is also evident to the California farmer that the class of help which will be substituted to meet his emergency will be accustomed to a higher class of living accommodations than has ever been the case with "floating labor."

Taking the class of older high school students in this State as a whole, they have been used to a life of cleanliness. There are probably four or five thousand of these young lads who are energetic and capable of intelligently performing the average class of farm work requiring eight hours of straight hand work or ten hours of work driving teams or ordinary farm implements.

Accustomed as I have been to hiring the average farm labor available in California, I am satisfied that the older high school student, whose health and physical powers have been passed upon, will probably be found more dependable and easier to instruct, also easier to get along with, than the former class of help, which is always uncertain, inclined to shirk, and in the majority of cases of reduced efficiency through the use of liquors and other habits.

It is not to be expected that this new class of harvesting help is going to work for over fourteen hours a day, put up with an abusive and disagreeable boss, or make their beds in discarded chicken houses, corrals, or unclean quarters without bathing facilities.

It is true of many farmers in this State that under the stress of the harvesting season they do not care how their help lives as long as they are on the job at 4:30 to 5:00 o'clock in the morning and stay with the work until it is done—which may be half past seven or eight o'clock at night.

WHAT MAY BE DONE.

With the competitive prices prevailing in the labor market this season, and in view of the extreme shortage of labor, it is up

More Crops

In these days of war and strife, the things we hear most about are more crops, and more abundant crops. Some eminent personage has said, "Whether for peace needs or for war necessities, the use of fertilizer is the basis of crop production." The truth of this saying no one knows better than the man who uses Hauser's Organic Fertilizers. He gets more crops, more abundant crops and better crops.

Don't delay, communicate with Hauser Packing Company about your fertilizer needs, use fertilizer and get results.

Hauser Packing Co.
Los Angeles, U. S. A.

to every farmer in this State to revise his attitude toward help which may be furnished for his own profit and benefit. In this, as in most other extensive organizing work, it is well known, that ideal conditions cannot be established, but there are a few essential and basic factors which must be taken into consideration in the field, and these must be practically considered by the farmers of this State, and they should co-operate in these essential matters, if they expect to be materially assisted and aided in accomplishing their work by those who expect to furnish this new kind of labor.

The young man, who goes into the field to labor, will no doubt find as others do, that sleeping under the open sky is the finest bed room in the world, and for this purpose, no doubt will come equipped with his own clean blankets and tarpaulin,

but he should have plenty of clean hay on which to make his bed.

He is going to demand reasonable hours and fair pay proportionate to services rendered.

He is going to demand facilities for keeping clean. Any farmer who can hang up a coal oil can having a perforated bottom with a water pipe and stop cock leading from the water tank, and who can throw up a temporary rough board screen around this contrivance, may have a shower bath for all practical purposes, at very little expense.

Any young man who puts in a fair day's work in the field is not going to need much guardianship nor will he be likely to get into mischief on Sundays after doing his washing and resting from the week's labor.

No day is long enough to waste any of it nursing a grouch.

Field and Garden Suggestions

San Joaquin Labor Census.

The Stockton High School faculty has been making a list of students who are willing to work on farms during vacation. The list is to be given to Farm Adviser R. D. Robertson, who has been taking a post card census of farmers who want help. Over 4,000 return postal cards were printed patriotically free of charge by W. S. Kendall of Stockton, with the following blank questions to be answered and returned by farmers: "I will need men, women, boys, girls more than I now expect to be able to obtain. These will be needed from to I will provide board, board and room, camping grounds, sanitary conveniences (place X after accommodations you can provide). Character of work to be done I will pay \$.... per day, \$.... per month. Name..... Address....." The high school students addressed over 3,000 of them.

These cards began returning two days after Mr. Robertson sent them out, and the table he prepared shows at a glance just who wants every class of help and when. So all who want work may be placed quickly by applying to him at the Stockton Chamber of Commerce.

Bean Leaves Dark Green on Alkali Spots.

On an alkali spot on Tharp Bros.' ranch in Sutter county the beans have repeatedly grown nicely until about eight inches tall and then died, says Chas. Johnson, who has worked the farm many years. When the bean comes up, it makes very dark green leaves, which have become a sign, to him, of alkali spots in anybody's bean field. The first leaves should be light green.

Association Raised Potato Prices.

El Dorado county shipped 40 cars of potatoes last year, the buyers pitting one grower against another and putting prices below the profit line. Late in the season 60 farmers within 10 miles of each other organized the El Dorado Potato Growers' Association and got their own price for the remainder of the crop.

Avoid Bean Weevils.

To the Editor: What is the best method and time to eliminate the bean weevil?—H. K. S., Colfax.

Do not plant beans or peas with live weevils in them. Weevilly beans float in water. Heat at 130 degrees kills them; but carelessness may destroy germinating power. Fumigation with a saucerful of carbon bisulphide set on top of beans in an air-tight barrel for an hour is safe if no fire is brought near.

Watering Uneveled Lands.

Because of lack of late rains many interior valley farmers are being compelled to irrigate their uneveled lands that were plowed early in the season in order to insure moisture during the growing season. The same practice is being planned by others who have secured one crop from such land and hope to secure another this season.

Where water is secured from ditches some prefer throwing up levees in contour fashion, following the high points of the land. This is satisfactory where a good head of water is available, but probably not so economical as the furrow system where water is scarce or expensive.

Where furrow irrigation is to be done, the land should be gone over with small shovel plows. A useful tool for this is a one-horse cultivator with two plows attached on each side. Where water is taken from a large ditch, a smaller ditch should parallel it and the furrows lead out from this. To keep the banks from cutting badly, when furrows are opened up and water turned in, short pieces of two-inch pipe or wooden boxes will save much trouble. If neither are available a shovelful of sod or the roots of weeds will serve to hold the bank when furrow is opened.

Where water is secured from a pumping plant, probably nothing is better than galvanized surface pipe, which can be secured in most any size and which is easily moved. With a sufficient supply of pipe to reach all parts of the field the water can be put on all of the ground with practically no waste.

Bean Straw in Corn Silage?

To the Editor: I would like to know if one can use bean (pink) straw for Indian corn for silage for milk cows to any advantage. If so, what proportion.—G. M., Turlock.

[We would prefer not to give bean straw silo room. It is all right as it is. We should make a straight corn silage and feed bean straw on the side. Does any reader demur?—Editors.]

Getting Ahead of Morning Glory.

Morning glory is about as serious a weed menace as there is on river bottom lands for such summer crops as beans, because of the difficulty in keeping it from covering ground before the beans are up. In parts of San Joaquin county growers have largely overcome this by plowing about five inches deep, just before planting. This cuts the morning glory deep enough so that beans are out of the ground before it gets a start.

Attempts have been made to hold it back by the continual use of underground weed cutters right up to planting time, but as these only cut two or three inches deep the weeds are up before the beans. After the beans are up, however, the weed cutter is almost indispensable, as it not only keeps the weeds down and conserves moisture, but also keeps a finely pulverized mulch on the surface. Hoeing in rows will keep the weeds well under control.

Darkling Ground Beetles.

Dark brown beetles a quarter inch long have been eating garden plants in Sutter County. The remedy proposed by Horticultural Commissioner H. P. Stabler is three pounds Paris green thoroughly mixed in 50 pounds flour. Dust this thoroughly over the foliage.

There is nothing good in success but that which is well won.

VACATION at the RUSSIAN RIVER

Swimming, rowing, sailing, canoeing, hiking or just resting; recreation to suit every anticipation. Easily reached. Small expense. Accommodations from camping to city luxuries. Read

Mechanical Power on the Farm

Users of tractors, engines, pumping plants, motor trucks, automobiles, electric motors, and other mechanical farm power are invited to make this department an exchange of their experiences and troubles.

CALIFORNIA'S MOST POWER-FULL RECLAMATION PROJECT.

[Written for Pacific Rural Press.]

It fires the imagination, to drive twenty-five miles under the Sacramento river levee from Knights Landing to Tisdale Weir, with a great inland sea stretching nearly to the horizon across Sutter Basin, and to think of the 50,000,000 pounds of beans that will be growing on that sea bottom this year, due to the mighty accomplishments made possible by use of electrically run centrifugal pumps and a regiment of tractors of all kinds.

At this writing, the center of Sutter Basin is under not less than nine feet of water at its shallowest place, the surface being 28 feet above sea level. Some 22,000 acres are owned by relatively small farmers, according to General Manager George F. Maddock of the Sutter Basin Co., mostly around the edges from which the water is already receding; and 46,000 acres are in the hands of the Sutter Basin Co. and the Chicago-California Development Co. The latter companies have put in the pumps, a straight drainage canal averaging 80 feet wide and 8 feet deep, 18 miles long, nearly 200 miles of drainage lateral canals, and some 52 miles of levee. This levee, with about eight miles yet to be built, protects this area, which is organized as Reclamation District 1500 under the State law.

MAMMOTH PUMPING PLANT.

The pumping plant cost over \$500,000, and the power to run it, including four operators, costs over \$1,000 per day. It consists of half a dozen 50-inch centrifugal pumps, each direct-connected to an 800-horsepower electric motor. Each pump throws 75,000 gallons per minute, and it takes fourteen or fifteen days of steady running twenty-four hours per day to drain the basin after the water gets down to the five-foot depth at its shallowest place. These figures are furnished by Charles Erickson, who has charge of the plant.

Owing to litigation for the past three years, occasioned by the proposal to run this immense sea of water around the outside of the dis-

trict through Sutter By-pass endangering the land owners there, the district is not enclosed enough to keep the Sacramento river out until it has lowered to 24 feet above sea level at the pumps. The litigation was settled in the Supreme Court recently, and half a dozen dredge boats were put to work in May to complete the levees.

Last year pumping commenced May 30, and the pumps worked two weeks without stopping, then about two days afterward to dispose of the seepage.

TRACTORS INDISPENSABLE.

Much tule land owned by the Sutter Basin Co. had been cleared and plowed the fall of 1915 after the sea had evaporated. The tules were first mowed off by an 18-horsepower tractor pulling a battery of five ordinary mowers hitched to an evener on wheels. The outside and center mowers were hitched by short tongues, while the other two had longer tongues hung over the sickle-bars of the mowers next to them. This worked fine, though tules were as tall as ten feet. One man watched the mowers while another operated the tractor. A similar system was followed last fall when the total clearing was brought up to 22,000 acres.

The tules were burned, the fire not entering the ground because it is not peaty. Disk-plowing with 60- and 75-horsepower tractors followed the mowing. The ground was replowed three or four weeks later so the roots would dry; and then "Randallized," harrowed, dragged, etc., to loosen the roots so they would float away on the winter floods.

PLANTING AND HARVESTING BY TRACTORS.

The company's 7500-acre crop was planted and cultivated by horses last year, but this season the planting will be done by "a battery of eight planters hitched by short tongues to an evener on wheels, all pulled by an 18-horsepower tractor. The company is to put in 2,000 acres under direction of Superintendent J. W. Cloyd, to whom we are indebted for the facts about the tractors. About 20,000 acres will be let to tenants in lots of 80 to 1500 acres—all planting being con-

horses, and winrowed by hand. The company has two big "pick-up" harvesters which thresh beans from the winrow, being pulled by tractor. There are four other similar machines in the Basin, two Holt harvesters and several stationary threshers. Harvesting commenced early in October and was finished about Thanksgiving last year, but this was exceptionally late, and luckily the weather was good.

When the levees shall have been made safe and complete enough to exclude winter floods, our imagination pictures the fertile, well-drained, probably irrigated plains within the district dotted with farmsteads of settlers who will be adding untold quantities to the world's food supply. But then, not having the floods to hold the land free from weeds until bean planting, it will be necessary to raise grain or early truck crops or work the land as fine and repeatedly as does Austin Kramer, one of the oldest settlers on the edge of the district, whose story will appear in another article.

ONE-HORSEPOWER PUMP SUPPLIES HOUSE.

[Written for Pacific Rural Press.]

One of the curiosities of the Los Molinos colony is the 900-gallon water tank perched high in one of the magnificent oaks which attracted J. Risse to buy the place in years gone by. The tank affords fire protection for the big two-story house, being higher than the peak of the roof. It permits the use of a bath tub upstairs, sinks, wash basins and other desirable plumbing all over the house, and use of two or three outdoor faucets, from which Miss Risse irrigates the lawns and roses. Hot water is piped all over the house, being heated by a tank at the kitchen stove.

Being shaded by the tree, the water is kept reasonably cool, and all expense of tower or tank house is avoided.

The tank may be completely filled in an hour from the ordinary plunger pump which has been rigged to a one-horsepower gas engine. The water is lifted perhaps 30 feet to the surface, and forced through a 1 1/4-inch pipe about 35 feet farther, to the bottom of the tank. A check valve in the short underground pipe from the well to the tree prevents water returning to the well. Thus the same pipe which carries water to the tank carries it down again. It is connected also with pipes to the cement milk house and to a watering trough in the corral. A hand valve permits water to be pumped direct to the latter without going into the tank.

"That gas engine is the best hired man I have," says Mr. Risse. "It never grumbles, except when it runs dry." And it doesn't lose a day or two sobering up after it gets a drink.

A tractor contract has just been awarded the Davis Sewing Machine Company of Dayton, Ohio, by the C. L. Best Gas Traction Company of San Leandro, calling for the construction of \$30,000,000 worth of model "40" Best tracklayer tractors, which will be built under the Best patents.

Never use water to cool a hot brass bearing.

TURLOCK PEOPLE WORKING OUT THE LABOR PROBLEM.

(Continued from first page.)

sink for wash basins, all draining to a cesspool back of the barn. The haying hands often take a shower at noon and always at night.

SCIENTIFIC DISTRIBUTION OF LABOR.

Mr. Lane has proposed a plan not only to attract and keep men on farms in the local ways mentioned, but he looks at the distribution of labor from a State-wide standpoint. He would put volunteer general managers in charge of five districts covering the State. To these men district managers would report and be responsible, the more the easier on each. The district managers would put to work as many volunteers and automobiles as co-operation with boards of trade, chambers of commerce, growers' organizations, etc., could secure. These volunteers would take a house to house census of the conditions affecting labor supply. They would fill in blanks made uniform for the State, containing such questions as the number, age and sex of each member of the family able to work, number of acres, irrigated or not, crops planted, what months some of the family could work elsewhere, when more help will be needed, whether any would work outside the county, etc.

These reports, forwarded to a central organization, could easily be tabulated by accountants to show quickly in just what parts of state or county labor will be needed at any time, and where labor will be released nearest to the places of need. This information would go back through the district managers to the workers wanting jobs and the farmers wanting help. The central organization would co-operate with the Federal and State employment agencies. To handle local movements of labor, the local organizations, such as the T. M. and G., chambers of commerce, etc., could everywhere act as free employment agencies; or boards of supervisors and municipalities could appoint committees to do the work.

DEVELOPMENTS FROM LABOR SURVEY.

The information thus gathered, if transferred to tabular sheets as the T. M. & G. is now doing slowly with two men constantly in the field, will show what crops are available, where certain crops will be short, where certain feeds and certain livestock are overplenty or too few. The Government is likely to want this information this fall, not in the haphazard balancing of the guesses of a few leading farmers but by definite figures.

A further development, according to Mr. Lane, may easily be community hog fattening pens, where cull fruit, vegetables, etc., are fed. The T. M. and G. has been thinking of trying this out, hoping to discover all the details of successful operation as they are now doing with many crops on their two experiment farms.

The end cannot be seen of what might come from such an accurate labor survey and tabulation, but Mr. Lane believes it would at least hush the talk of importing Oriental labor.

Put every implement in good shape immediately after using.

LAYNE & BOWLER PUMPS

PERCY H. CLARK
715 IN VAN NUYS BUILDING
LOS ANGELES

March 9, 1916.

Layne & Bowler Corporation,
900-910 Santa Fe Avenue,
Los Angeles, California.

Dear Sirs:

I think it is no more than fair that I should tell you that the Layne & Bowler Pump which you installed for me on my ranch near Florence in the spring of 1909 has been in constant operation during the irrigation seasons ever since that time, with practically no repairs and no trouble whatever.

The tenant on the ranch reports to me that all he has to do is to keep the oil cup filled, and that the pump never gives him any trouble, although it has been doing very heavy work, and has shown very high efficiency.

Yours very truly,
Percy H. Clark

A Perfect Rice Binder Engine

Guaranteed
For Life

MADE FOR YOUR RICE BINDER, as well as for general, all-around power purposes. The "NEW-WAY" has met with unqualified success in the rice and grain fields of the South.

Light and compact—no bulky, heavy water cooling system. Easily attached by patented bracket. Mounted on sub-base, this new model is especially suited for all-around work. Readily moved from one job to another on hand truck or skids.

THE "New-Way" ENGINE GOES AND GOES RIGHT

Has lightest operating weight of any engine built for RICE, grain or corn binder; faultless jump-spark-ignition—high grade automobile carburetor; multiple disc clutch pulley; enclosed, oil tight, dust-proof, hinged crank case; direct cooling accomplished without any moving parts except fly wheel of engine.

Investigate the "NEW-WAY" now. Full information on request.

Built in 1 to 12 H. P., both vertical and horizontal. Prices according to size and equipment. Send for catalogue No. 42. Ask your dealer about this engine.

General Agricultural Review

Field Notes.

San Joaquin Delta potato digging has begun.

In Tulare county all crops except grapes are short.

Canneries are working full time in the Sacramento Valley on the asparagus crop.

The beet sugar production of the United States from 1910 to 1916 shows an increase of 60 per cent.

San Joaquin County barley is fine on the east side, where soil is mostly black and seeding done early.

In Imperial valley the barley crop this year is put at 250,000 sacks against 400,000 sacks last year, a shortage of 150,000 sacks.

It is reported from Oroville that there will be 9,000 acres of rice under the Western canal this year. This is an increase of 3,000 acres.

Reports from Phoenix, Arizona, are to the effect that 35,000 acres in the Salt River valley has been planted to Egyptian cotton this year.

Reports from San Luis Obispo county say that bean planting is well under way and the acreage will be 25 per cent larger than last year.

The Director of Agriculture of Bermuda states he anticipates that California will be the source toward which Bermuda will look in future for its supply of onion seed.

Wheat harvest on the Sperry Flour Co.'s experiment farm, where many varieties of Australian wheat are being tried out, will begin about June 16.

The hopfields around Santa Rosa are disappearing. Several of the big fields have been plowed up and put into cereal crops of various kinds this spring.

Timely late winter rains have resulted in hundreds of acres of grain that were planted for hay, as usual, developing a bountiful yield of grain in San Diego County.

A committee comprising tin can makers and government officials states that the shortage of tin makes it imperative that cans be supplied only to packers of perishable foods.

The Santa Ana Sugar Company that owns a big plant at Santa Ana has been sold to the Holly Sugar Corporation for \$2,500,000. S. W. Sinshemer will be the new president.

Harry Fraser of Chico, one of the best posted men in the hop industry, advises hop men to abandon that crop and plant their fields to beans and potatoes.

Several thousand acres of the Fontana Land Company's lands will be planted to beans this season. Varieties planted will be blackeyes, teparies and pinks.

In the vicinity of Riverside and Corona sugar beets are a good crop, and barley hay fifty per cent of a crop. Loose alfalfa of first cutting is selling for \$20 a ton, tepary beans for seed, 12½ cents a pound.

Labor conditions in San Joaquin county are in bad shape. Producers can not get enough help of the type wanted. Wages are now \$2.50 per day. The greatest demand for help will exist from July to November.

The Turlock Merchants & Growers have already contracted for 1,270 acres of beans and expect 2,000. These are mainly California reds, Mexican reds and teparies, according to A. J. Eddy of the T. M. & G.

Officials of the Porterville Chamber of Commerce are on record as being unalterably opposed to the plans for importation of Oriental labor into California for harvesting of crops this fall and winter.

The State Railroad Commission has announced that a number of water companies in the State serving cities and towns have voluntarily reduced their rates in order to encourage the cultivation of vegetables and other foodstuffs in gardens and vacant lots.

The condition of winter wheat in the United States on May 1, this year, 73.2, was the lowest that it has been on that date since 1888. Nearly 31 per cent of the acreage planted was abandoned.

Tomatoes will be packed by the Kings County Packing Company at its Armona plant this season. This is the first time that the company has packed tomatoes. Approximately 60,000 cases will be put up.

The California Lima Bean Association, with headquarters at Oxnard, is not a combination in restraint of trade, according to an official report transmitted to the Department of Justice by Special Agent Webster.

As a result of investigations conducted by Sealer of Weights and Measures L. J. Dolan, it is claimed there is evidence of extensive speculation in California rice, which has virtually doubled in price in the last sixty days.

Work has been started on the formation of an alfalfa growers' association in the vicinity of Porterville, to be affiliated with similar associations in other portions of the State for marketing direct of forage products.

The Los Alamitos sugar factory at Artesia is making repairs and improvements so as to handle better the sugar beet crop of the 15,000 acres of beets that are now growing in the Artesia section, and the crop promises to be a good one.

Nine acres of potatoes and three of beans were planted recently in Palo Alto on town property between the State highway and the railroad track near the depot. The potato crop is expected to swell the coffers of the city treasury \$2,500.

The North American Mercantile Company pleaded guilty before Federal Judge M. T. Dooling recently for indictment charging misbranding rape seed which they called mustard seed. A fine of \$1,000 was fixed and paid.

In view of the present and prospective high prices of sugar, it is believed a very material advance in prices of beets will be paid to growers under a new plan of paying for beets according to net prices received for sugar.

It is announced from Calexico that arrangements have been completed whereby the Mexican government of Baja California agreed that no cotton seed can be imported into Lower California unless it has the approval of the United States Horticultural Board.

The California Development Board estimates an increase of 30 to 40 per cent in bean acreage, or about 400,000 acres planted to beans in the State. Some contracting for pink beans on a basis of seven cents per pound, whites at nine to 11 cents and Limas at 10 to 11 cents per pound is reported.

Stockton onion growers selling at \$1.50 per sack, refused to accept a reduced price offered by commission men. They then got together and put up \$5 each as a forfeit if any of them should sell at less than \$2 and hauled their onions home.

The Glenn county farm adviser has made public the results of feeding rice in his county. The Glenn poultry fared well, on either paddy (whole with the hull on) or on cracked rice. Horses fed half barley and half rice as the concentrated part of the ration relished the feed and did well on it. The feeding of rice to hogs has been found to give satisfactory results at a relatively low price.

The cantaloupe crop in the Turlock district has been reduced to 30 per cent of what was planned March 1 according to Manager D. F. Lane of the T. M. & G. This is due to high winds and light soil, cutting plants while young, cold weather, etc. This has not been replanted, owing to fear of labor shortage,

car shortage, etc. Mr. Lane believes labor shortage will not be serious this year.

Deciduous Fruits.

Canning of cherries was begun at Santa Rosa last week.

Recent reports from Porterville that the peach crop in that section had been damaged 40 per cent are said to be gross exaggerations.

The Santa Ana Valley will this year reap a big crop of walnuts if hot weather does not blast the prospects, says O. H. Burke, secretary of the Santa Ana Valley Walnut Growers' Association.

The address of Ralph Thomas, who wrote the excellent article, "How I Saved My Apricot Crop," which appeared on our first page last week, is Gilroy, and not Watsonville, as stated inadvertently.

The Vanomar Produce Association of Van Nuys announces that they will advance to growers \$15 per ton on their cling peach crop and \$20 per ton on apricots, thus enabling them to harvest their crop without trouble.

It is announced from Visalia that the Tulare Canning Peach Association's entire pool the coming season, estimated at over 3,000 tons, has been sold to the Merger Peach Company of Southern California at a price in excess of \$45.

The G. W. Hume Co. cannery at Turlock has increased its capacity from 700 cases per day, when it was established eight years ago, to 4,000 cases daily due to this spring's overhauling and addition of improved machinery, as reported by Superintendent Geo. Shannon. They have tin cans, sugar, fruit and all supplies contracted.

Governor Stephens has signed the Benson bill, which compels boards of supervisors to appoint county horticultural commissioners when such officials are needed.

Peaches throughout Tulare County will be a bumper crop, according to leading packers, who completed a survey of the deciduous orchards.

State Horticultural Commissioner George H. Hecke has issued a call to the 100 or more county horticultural inspectors of California to meet at Modesto June 6 and 7, to discuss ways and means of caring for the State's \$150,000,000 fruit crop.

The Tulare County Canning Peach Growers' Association has decided not to fix prices for the canning peach crop this season, but to allow the packers to fix the prices and the entire crop of the association may be sold to the highest bidder.

Reports from 462 storages to the U. S. Department of Agriculture show that their rooms contain 439,325 barrels and 723,219 boxes of apples on May 1, 1917. The information re-

ceived indicates that there were 33.1 per cent less apples in storage than on May 1, 1916.

Citrus and Semi-Tropical.

The Valencia orange crop in the Porterville district is put at 1,000 cars this season.

A. L. Wood of Indio shipped the first part of last week an eight-pound box of figs, the first to go from the Coachella Valley, which sold for \$6. F. P. Carrington of Indio the following day sold two boxes for \$3.50 each.

Robert Horbach has been named Porterville manager for the Stewart Fruit Co. to replace W. S. Shippey, who recently resigned to take charge of the organization of a new lemon association to be affiliated with the California Fruit Growers' Exchange.

The annual session of the California Avocado Association was held in Los Angeles May 18 and 19. These nine directors were elected: H. J. Webber, F. O. Popenoe, Chas. D. Adams, T. U. Barber, Wm. H. Sallmon, E. E. Knight, W. L. Hardin, B. H. Sharpless, Thos. H. Shedden.

W. S. Shippey, newly connected with the California Fruit Growers' Association after a number of years in the independent orange business, has completed the formation of a new citrus association through which practically all of the lemon output of southern Tulare County will be handled hereafter.

Grapes.

Horticultural Commissioner Fred K. Howard says that every leaf of every vine must be thoroughly covered with sulphur to prevent mildew and the sooner vineyardists get to work the better.

The people of the State will vote again in the fall of 1918 on the liquor question. A bill embodying the principles of the Rominger bill will be put on the ballot at that time by the Grape Growers' Protective Association.

The American Vineyard Co. of Fresno has been reorganized and will in the future conduct business under the name of the American Seedless Raisin Co. The concern decided to change its name for the reason that the old title suggests wine rather than its proper business.

The Clovis Fruit Co., composed of 22 growers, sued the California Wine Association because of failure of the wine association to maintain its purchasing price for 1915 wine grapes, and was awarded \$6,740 damages. The association claimed that the emergency war tax placed on brandy for fortifying purposes made it impossible to manufacture and sell wine on a safe business basis.

With Gasoline at 4c per Gallon, an ordinary gas engine could not produce power as cheaply as does the Victory Oil Motor

12 to 100 H. P.

This engine is made in California to operate on California asphaltum base oils. It has no valves, cams, batteries, or small working parts. No heating of fuel, no hot balls, and no torch required for starting.

Ask for our Rigid Guarantee. Owing to scarcity of material our output will be limited. If you want a Victory Motor this year, put in your order NOW.

Victory Motor Co.
NILES, CALIFORNIA

Miscellaneous.

Cutworms and rootworm beetles have been scarce in San Joaquin County this season.

The rain May 25 was too late to help San Joaquin oats and barley much, but benefit to wheat is expected.

The United States government has approved the plan to import farmers from China to cultivate American farms during the period of the war.

Eighty-eight corporations and individuals have been indicted by the Federal Grand Jury for conspiring to monopolize interstate commerce in onions.

California FRUITS

AND HOW TO GROW THEM

A Manual of Methods Which Have Yielded the Greatest Success; With Lists of Varieties Best Adapted to Different Sections of the State

By Edward J. Wickson

Emeritus Professor of Horticulture, University of California.

Seventh Edition—Revised

Over 500 pages of text, besides numerous full page, half-tone illustrations on plate paper. Size of page 6x9 inches; handsomely bound in cloth; gold stamped on backbone and front cover.

This is the standard work on California Fruits, and one or another of its editions is to be found in the homes of most progressive fruit growers in this State.—San Francisco Chronicle.

Contents by Chapter Titles

The Climate and Its Local Modifications. Why Climate Specially Favors the Growth of Fruits. Fruit Soils. Wild Fruits. Mission Fruits. Introduction of Improved Fruit Varieties. Clearing Land for Fruit. Nursery Budding and Grafting. Preparation for Planting. Planting Trees and Vines. Pruning Orchard Trees and Thinning Fruit. Cultivation. Fertilizers for Fruit Trees and Vines. Irrigation. Apple. Apricot. Cherry. Peach. Nectarine. Pear. Plums and Prunes. Quince. Vine Propagation and Planting. Pruning and Care of the Vine. Grape Varieties. Date, Fig, Olive, Orange, Lemon, Lime, etc. Banana, Loquat, Persimmon, Pineapple, Avocado. Berries and Currants. Almond, Walnut, Chestnut, Peanut, etc. Fruit Canning, Crystallizing, and Drying. Injurious Animals and Birds. Protection from Winds and Frosts. Utilization of Fruit Wastes.

Price, \$3.00, Postpaid

California GARDEN-FLOWERS

SHRUBS, TREES AND VINES

Being Mainly Suggestions for Working Amateurs

By Edward J. Wickson

Hon. President California State Floral Society

First Edition—1915

262 pages, 5½x7½ inches; illustrated; cloth bound; 12 full-page photo-plates and numerous text illustrations.

This book aims to tell the beginner in California, whether he be a scholar struggling with his school-garden, or a suburbanite gazing vacantly on his residence lot, or the farm-home maker, who is puzzled to translate his experience with teams, plows and pasture fields into trowels, pruning-shears and lawns, just what to do to make garden-soils, grow plants and surround his abode with beauty under the peculiar climatic conditions of California.

Price, \$1.50 per Copy, Postpaid

525 MARKET ST., SAN FRANCISCO

Santa Ana has just completed a \$85,000 woolen mill and it is expected to get to work in two or three weeks. It will make blankets and woollens.

At an election last week, the people of the Imperial Valley sanctioned the issuance of \$2,500,000 in bonds for flood protection and irrigation improvements.

Members of the Glenn County Farm Bureau are planning their agricultural exhibits to be made during the county fair, to be held Sept. 26 to 29.

For the construction of 50 miles of concrete highway, the Board of Supervisors of Solano county has ordered published a notice of intention to perform the work at a cost of \$500,000.

A plan is on foot in Shasta county to form an irrigation district comprising 118,000 acres of land which will be bonded for \$200,000, the money to be used to buy the Happy Valley Land and Water Company.

The California Fruit Growers' Exchange has agreed with the State Council of Defense to plant 25,000 acres of beans this season. The beans are to be planted in the orange groves.

The first Federal Farm Loan Association in Contra Costa County has been successfully organized, with 16 members and applications for over \$40,000. It is known as "The Pleasant and Hill Farm Loan Association."

Bakersfield, it is reported, is to have a big sugar factory to cost \$800,000, work on which will be started in 30 days. The money will be furnished by the Pingree interests that have factories at Visalia and Corcoran and in Utah.

There is quite a bit of bee disease in the apiaries between Corona and Elsinore, Riverside county, also around Ramona and Lakeside, San Diego county. Corona honey is selling at 10½ cents for white and 11¼ for water white.

It is said that the United States Reclamation Service engineers will supervise the construction of a temporary weir across the Colorado river this summer, if the Yuma Valley users persist in their protest over the proposed weir.

Officers of the Yolo County Fair have set October 4 as the opening date for the 1917 fair. The Farm Bureau, through its local units, is expected to be contributing factors toward the success of the fair this year.

Tulare farmers will have plenty of late ditch water this season, according to V. E. Hammond of Tulare, who has returned from a trip to Giant Forest. There is eight feet of snow in the forest now, more than there has been at this time for twelve years.

A tremendous lot of energy is being wasted in Glenn county leveling the practically level lands on contour. The same amount of dirt moved right would level checks, and make the borders. How a harvester or even mower can get over those snakelike levees—it would make a snake dizzy.

Frank M. Walton, head of the original project to include the entire Victor Valley in the formation of an irrigation district for the reclamation of 100,000 acres of land on the west side of the Mojave river in Victor Valley, says that the petition of the majority of the property owners will be filed with the board of supervisors of San Bernardino county.

Reports from Banning say that Morongo valley, hitherto unwatered, in the desert thirty miles northeast of Banning, is to be made to blossom as a rose. Water has been developed there by the Morongo Valley Water Company of Banning and Pasadena. The water is being turned into the distributing ditches after being cut through a range of hills and diverting the big Morongo river.

The first report of the recent food survey of the State shows that the bean area in Los Angeles County is

75 per cent above normal. The citrus crop will be 10 to 15 per cent above the average. The deciduous fruit crop apparently will total 50 to 75 per cent above normal. The alfalfa crop is expected to be above the average. A 75 per cent crop of barley and other grain hays is expected.

A summary of the May winter wheat crop report for the State of California and for the United States, as compiled by the Bureau of Crop Estimates, United States Department of Agriculture, is as follows: State—May 1 forecast, 4,870,000 bushels; production last year (final estimate), 5,600,000; two years ago, 7,040,000; 1910-14 average, 7,166,000 bushels. United States—May 1 forecast, 365,000,000 bushels; production last year

(final estimate), 481,744,000; two years ago, 673,947,000; 1910-14 average, 494,654,000 bushels.

Nevada Notes.

The Western Pacific Railway Co. offers \$20 in gold for the best paper on the most feasible way to reclaim land in Nevada now unsuited for agricultural purposes.

It is claimed that peanuts are profitably grown in Southern Nevada, 1,100 pounds having been sold recently to a Palms confectionery store, at 7½ cents a pound.

A while ago announcement was made that in Pahrump Valley, Nevada, about 60 miles over the mountains from Las Vegas, two bales of cotton to the acre has been grown.

This Silo Filler Makes Alfalfa Chop

Junior Mill

Alfalfa Recutting Attachment. 6 sizes for Field Use.

Grip Hook Feed Table

Write NOW For Wonderful New Smalley Book FREE

Learn how thousands of farmers are fattening hogs, cattle, sheep and poultry with alfalfa chop made quicker, easier, better than ever before! Learn how they're selling their Al hay, milling off-grades for feed—how they're making simply great combination feeds from clover, rice, straw, bean straw, pea vines, oats, rye and corn stalks—600 to 900 pounds per hour with Junior Mill and 6 to 8 horsepower engine. This mill cracks peas, corn or velvet beans.

Smalley Silo Filler (Seven Sizes)

Chain Drive—Force-Feed Grip Hooks

Grip hooks do the work of human hands. They catch the corn—automatically push it under the paddle roller and powerful, swift revolving, bevel edge knives set like a lawn mower do the rest. No grinding, no pounding. Turns out ensilage, clean-cut, fine, uniform, unbeatable in richness. Increases tonnage! Saves time, money! Two men's labor with large outfit!

Chain Drive forever does away with belt wear, belt slipping. That means power saved! Blower operates independently of knives. Let your fan spin fast or slow—speed of cutter shaft is unchanged—more power saved! A saving of 1-5 to 1-4 in power alone. Think of it! Two machines in one!

Get all the facts. You want an outfit—need one. Write NOW for sample of chop and FREE book, to

Financing Live Stock and Dairy.

[By J. M. Henderson, Jr., of Sacramento.]

The California Bankers Association gathered about four hundred members in annual convention at Sacramento recently. The growing interest in agriculture on the part of city and country bankers alike was the outstanding phase of the convention. The opening address by the president of the association, J. M. Henderson, Jr., of Sacramento, reflected strongly this new attitude of the banker toward the farmer and his problems. We take from this address certain ringing declarations which we desire to have considered in connection with the live stock and dairy industries:

Our war with Germany overshadows every industry. We could arm and equip 10,000,000 men for home service if necessary. Our present food supply is more than enough to feed ourselves and for a large exportation to France and England. Although it would be better if we had more food, our present high price of food stuffs is largely psychological and due to speculation. Food speculators should be harshly dealt with. This speculation is worse than unpatriotic; it is treasonable. For success we must raise more food. We have the land; we must use it. In the past we have been living largely on our natural resources—our capital. In the future we must prepare to live on our production alone.

PRICES MUST NOT BE SET BY GAMBLERS.

To make business safer, all that is necessary is to make prices of commodities more uniform. At present the old moth-eaten law—the law of supply and demand—no longer adjusts the selling price. If supply and demand did regulate the selling price, that is all that can justly be asked. The law of supply and demand under our present system of free and wasteful competition has failed.

In our former conception of competition we believed that free competition would force people to sell their products at just a fair price and neither higher or lower. But this has not been the result.

These fluctuating prices make business uncertain. Low prices cause failures and depression. Some go out of business, production decreases for a time, prices rise again, new people rush in to benefit by the high price, wasteful competition begins again, and we have the same cycle of good times and depression. The remedy is co-operation.

A DAIRY ILLUSTRATION.

An example at hand is the dairy business of the State of California. For awhile, in fact for many years, the dairymen were making large profits. There was a deluge of dairymen to take advantage of profitable conditions. Costs of feed and labor went up and the relative selling price of dairy products went down. The dairymen had invested and borrowed heavily on livestock and could not go out of business, even though operating at a loss, because they could lose less by operating at a loss than by closing down entirely and maintaining the fixed costs of their business. Many dairymen have, of course, gone out of business and into bankruptcy. Idle dairy farms all over the State soon be cursed with that most vex-

atious and tenacious evil—land tenantry, which causes the decadence and downfall of nations.

point to the logic of this reasoning. But those that remain are not making a profit. It is easy to foresee that this condition will keep new dairymen from entering the business, the demand for milk will increase, prices will go up, then new dairymen will rush in to profit by high prices, and then competition among themselves will force prices again below the cost of production. Such conditions are bad for business and worse for banking.

Agriculture is the backbone of the nation. The farmer has been a prey of the speculator, who has ruthlessly fixed prices without regard to the cost of production, for his personal benefit. Laws should be enacted to eliminate this parasite and at the same time protect the legitimate distributor who is entitled to protection.

If agriculture had been better supported in the past we would now be in a much better position to carry on a successful war with Germany.

CO-OPERATION THE CURE.

We have established land loan banks, which will no doubt encourage agriculture and be a great benefit. But they do not strike at the root of the trouble.

The remedy is co-operation in better marketing conditions and the establishment of selling prices truly based upon the law of supply and demand. Allow the farmer a fair profit and agriculture will act as a balance wheel upon all our industrial life, just as the standardization of gold has acted toward credit and exchange.

Better marketing conditions for the farmer will stimulate agriculture, increase the production of food stuffs and lower the high cost of living without lowering the standard.

THE DUTY OF BANKERS.

Bankers can help in this great work by teaching the farmer the benefits to be derived from the keeping of proper accounts—how to figure the interest, taxes, and other fixed costs in the same manner as the city business man. If this is done the farmer is in a better position to decide the value of different crops and the best methods of intensive cultivation.

It is fundamentally important that the selling value of agricultural products be changed so that it will be cost plus a fair profit, as in any other business.

Farmers should organize into associations for the better marketing of their products. It is the duty of bankers to finance and aid these associations.

The decreased production of food-stuffs in relation to the increase in population is the most direct cause of the high cost of living. During the past 15 years the increase in population has been about 20,000,000. During the same time the decrease in useful livestock has been about 40 per cent. This should compel the attention of the city banker as it already has of the country banker.

No community can prosper with a declining agriculture. Bankers should encourage and promote agriculture on a scale never before known.

An Inexpensive, Clean Dairy

[Written for Pacific Rural Press.]

An inexpensively equipped small dairy very easily kept clean, is the way State Dairy Inspector J. H. Severin characterized W. J. Gormley's outfit near Stockton. We found the ground floor of the tank house cemented and wainscoted for a dairy house. The tanks for cleaning utensils were supplied with hot water from a boiler on the kitchen stove which is high enough to give good pressure. Wide screened windows on east and west sides provide ventilation and light. The milk cooler is operated by fresh water from the tank.

HAND BOTTLE FILLER.

The bottles are placed on a low bench. The bottle filler is simply a 14-quart bucket with stiff handles, through the sloping bottom of which has been screwed the tube through which milk flows into the bottle. The tube has a large mouth with rubber washer, which fits into the bottles and prevents their running over. A coil spring holds the valve closed in the tube except when the spring is compressed by the weight of the bucket resting on the tube. A hole in the bench permits the bottling outfit to rest upright while being filled. Then it is set onto each

bottle in turn to fill them. Only a few drops were spilled on the bench where ten or twelve gallons of morning's milk had been bottled. This bottle filler cost \$8.50 in San Francisco. The tube, spring, etc., unscrew and are easily cleaned. The filler is always flushed with water after using, to prevent any milk drying in it. Cleaning up the dairy house, utensils, bottles, etc., takes Mrs. Gormley not over two hours per day.

MILKING BARN.

A concrete floored room about 7x10 feet opens from the corral for one or two cows to enter at once. This has windows on three sides. The gutter is simply a shallow sloping trench which is flushed out clean in a minute. It takes an artist to avoid loss when milking into the covered bucket Mr. Gormley uses, but he has no trouble.

The sandy corral is cleaned up every day and the manure wheelbarrowed to a pile 100 feet away. An open-sided whitewashed shed on the south, a tight board fence on the west and part of the north, shelter cows from wind. A plank platform in front of the hay manger avoids mud and is easily cleaned.

Octagonal Silo Easily Built

[Written for Pacific Rural Press.]

Octagonal silos are seldom seen in California. If left octagonal inside, they would probably result in poor packing of silage and air space which would encourage mold.

But the octagonal silo put up in the fall of 1915 by W. M. Colbert & Son of Tehama County has not this objection, while it has the advantage of easy cheap construction. The material for this, including cement for a three-foot pit, cost \$125. The silo is 22 feet above ground and a trifle over 12 feet in diameter, holding about 60 tons. Mr. Holbert and his son put it up.

Except for the lining, which is of tongue-and-grooved boards fastened vertically to pieces of 2x6 cut to fit the corners and present a circular face, every piece in the silo is of 2x4's, sized on all sides and cut the same length with both ends cut to an angle of 45 degrees from the inside edge of the piece.

In building the silo, each of the eight sides was laid with the 2x4's flatwise and alternately shoved endwise enough to leave space on top of the end of the one previously laid for the end of the piece on the same level in the next side to rest on it. The angled cut of the ends made all corners flush and smooth. As each course was laid, the lapping ends were each fastened by a spike to keep the corners from spreading under pressure from the silage.

The doorway was sawed out as the silo was built up, after cleating the pieces to hold them together. The cut was made on a bevel so pressure from inside would hold them tight. The mistake was made of cutting them too large, so they are clumsy to handle. Between each door, four of the side pieces were left intact to hold the silo together.

Another mistake was in making the pit slightly too small in diameter so the lining of the silo rested on a shoulder. When the wood be-

came damp the horizontal pieces swelled more than the vertical lining so the lining was raised off the shoulder, and considerable spoilage was found around this cavity. If the pit had been the right size so the lining could have extended below the shoulder, the lift would not have left an open cavity.

GRINDING SURPLUS CORN.

[Written for Pacific Rural Press.]

Most silo owners find that they have a surplus amount of corn after silo-filling each fall; and while it often is not marketable, there is a good deal of grain that can be profitably fed out to the cows by grinding it.

That is the practice on the Bridgeford Company's ranch in Contra Costa county, where 250 tons of silage are harvested. Last year the surplus corn was ground up, ears and all, and fed successfully with the grain ration fed the registered Holstein herd maintained on the ranch. According to Mr. Bridgeford, there is only about ten per cent cob in the ears, and it is cheaper to grind the entire ear and let the cattle pick out the corn than to shell the corn and then grind it.

CREAM FROM GOAT'S MILK.

[Written for Pacific Rural Press.]

Set away goat's milk in shallow pan 12 to 15 hours. After that, put on a stove and heat till a scum crumples on the top. Avoid the boiling point. Then set aside to cool and settle for another 12 to 15 hours. Then skim. Rich, heavy cream is the result. This is called Devonshire cream, and is very rich and sweet and has a higher per cent of richness than cream from cows' milk. On account of the finely divided particles, the butterfat is slower to rise than that of the cow's, but digests in about one-third of the time.

Do You Want Long Distance Backing?

We have a son of the California State Champion three-year-old for sale. Born October, 1915; Sired by PRINCE ALCATRA KOENIGKE, whose dam is TILLY ALCATRA.

The Dam of this young bull is not a fifty-lb. cow, but she has to her credit 21,208 lbs. milk and 860 lbs. butter in one year, which is the largest record ever made in California by a Junior three-year-old.

If you are in the market for a bull, it will pay you to visit our ranch and see what we have to offer—at prices that will surprise you.

Look over our consignment at Sacramento May 31

"THE NAME GIBSON INSURES QUALITY."

Live Stock and Dairy Notes

Livestock breeders all over the State are invited to send on postal cards, notes regarding their sales, State and County Fair intentions, new stock, etc.

The Dairy.

The high price of cheese has revived the home industry of making Monterey cheese, sometimes known as Jack cheese.

Governor Stephens has signed Satterwhite's pure milk bill, making supervision of dairy products more complete and workable.

Nothing will deter up-to-date dairymen from attending the notable sale of purebred Holsteins at Vina Ranch, June 5, 6 and 7.

Manager Patrick of the Alpine Evaporated Cream Co. was in Salinas recently with the object of ascertaining the feasibility of a branch factory at that place.

The Central Creameries Company of San Francisco has established two casein factories, one on the Charles Martin ranch, near Petaluma, the other at Nicasio.

The State record for under-two-years Holstein heifers has been broken by K P Tola Joe, daughter of King of the Pontiacs and owned by Gotshall & Magruder of Ripon. Her record is 27.14 pounds butter from 459 pounds milk in seven days.

Purvine & Son report recent sales of registered Jerseys as follows: To C. S. Hamilton, Sebastopol, Legacy's Fairy Boy out of dam with a record of 534 pounds fat; to Steinbeck Bros., Petaluma, two bulls; S. S. Stice, Petaluma, one bull.

It is claimed that the dairymen who are furnishing milk to the citizens of San Jose are making no money. Dairymen who raise their own feed manage to get by, but those who have to buy feed can't, says L. R. Lenfest, a leading local dairyman.

Stocks of butter in store in Los Angeles May 24, 1917 were 130,874 pounds against 95,508 pounds the week previous, an increase of 35,366 pounds for the week. May 24, 1916, the stocks of butter in store were 76,655 pounds, making the present holdings 54,219 pounds in excess of last year's.

The cold storage holdings of eggs in Los Angeles May 24, 1917, were 72,476 cases against 68,971 cases the week previous, an increase for the week of 3,505 cases. May 24, 1916, the cold storage holdings of eggs were 54,882 cases, showing an excess of holdings at present over those of a year ago of 17,593 cases.

T. B. Purvine & Son, Petaluma, have just received word from the American Jersey Cattle Club to the effect that they have 19 cows in the Register of Merit. One of these, Park Beauty Roma, a six-year-old, made 557 pounds fat. Their two young herd bulls are now credited with three and two daughters respectively in the Register of Merit.

A cow that produced six times as much butterfat in a month as the average for all the dairy cows of California won April's honors in the State Dairy Cow Competition now being conducted by the University of California College of Agriculture. She was "Imported President Doris of Lewison," owned by the Palo Alto stock farm of Palo Alto.

The stocks of butter in cold storage May 1, 1917, as reported by the Department of Agriculture at Washington, were 2,586,593 pounds, the holdings of 281 firms, against 6,296,854 pounds April 1, the holdings of 300 firms, a decrease of 3,710,261 pounds. May 1, 1917, 211 houses reported holdings of 2,433,144 pounds against 1,081,913 pounds the same date last year, an increase of 1,357,231 pounds.

Guy H. Miller, proprietor of the Venadera herd of registered cattle, writing from Modesto, Cal., says: "I note in the issue of May 19, under the heading 'Livestock and Dairy Notes,' it is stated that the Guernsey cow Clementine Mabel, 11

years 11 months old, is the oldest cow in the State Dairy Cow Contest, and produced 56 pounds of fat in March. This statement is somewhat in error. I think the oldest cow in the contest is the Jersey cow Petroleda, 15 years 2 months old on entering the contest, owned by J. W. Bomberger of Modesto. This cow has been doing remarkably good work in the contest for a cow of her age, and for the month of March is credited in the published report with producing over 41 pounds of fat."

Beef Cattle.

Yosemite National Park has been opened to cattle grazing by an order of the National Park Service. About 100,000 acres are available for grazing there.

Fuller Brothers shipped recently a carload of fatted steers from their ranch near Calexico to the Kansas City market. This is said to be the first shipment of fat cattle ever sent East from that point.

The summer range available in the Shasta National Forest is as follows on both government and patented lands: Government land, 1,295 cattle, no sheep; patented lands, 3,500 cattle, and 3,700 sheep.

Many stockmen in Modoc county have sold out in face of acknowledged shortage of meat, because they could make more money in grain and other crops. They believe the packers assigned districts to each other and refused to buy in each other's districts.

It is reported that the Department of the Interior will this year open every available acre in the Yosemite Park to stockmen for grazing at the earliest possible date. Park rangers state that field conditions are very good in the Park this year.

Benj. Quigley, of Linne, Cal., writing under date of May 24, says: "There is a lot of good beef to be had in this county now, but conditions are not favorable for fall beef. The range is short and all available grass will be consumed early. There was no wild hay to mention, and everybody will cut every straw possible for grain, and go into the winter short of hay again."

Swine and Swinemen.

The Highland Herd of Fair Oaks, Sacramento County, is a young herd. It carries the blood of such renowned animals as Patternmaker, Brendel's Beauty and Jim's Dandy, all famous prize winners of Eastern shows.

Mr. T. H. Munson of Pomona believes in going in the hog business right. His first litter of pigs were from a fine sow, Tecumseh Wonder, 604131, and sired by Rood's Giant, 253447. Mr. Munson has two fine-looking brood sows for a start. He expects to announce two boars for sale in the fall.

Sheep.

Two yearling Merino rams of the Meham flock, sheared for the first time this spring, yielded fleeces of 42 pounds each.

George W. Perkins, chairman of the Mayor's committee on food supply in New York, has purchased 10,000 western sheep of good breed and will sell them to farmers of the State at cost, in an attempt to revive sheep raising.

Henry G. Kaupke of Kaupke Bros. has just returned from Oregon, where he bought 30 registered Hampshire ewes and their lambs to add to their flock. They have a fine lot of lambs this year. They raised about 140 per cent. The feed condition in Yolo County is improving the last month.

The Frank Meham Estate reports recent sales as follows: To Santa Cruz Island Co., 50 American Merino

and 50 Rambouillet rams; to C. A. Ornbaum, five Shropshire rams; to A. O. Stratton, two Shropshire rams; to Pimental Bros., Byron, 42 cross-bred Shropshire and Merino rams; to John Monte and Frances Fox, of Nevada, five Red Polled bulls, and one Red Polled bull to J. W. Wood, Anderson.

America has at the present time fewer than 50,000,000 sheep, though her domestic requirements call for three times that many. Fully half of our wool supply now comes from abroad. Yet there are vast areas of waste land in various sections of the United States which with little effort could be turned into excellent sheep pasturage, and which the prevailing high prices for mutton and wool should induce farmers to take advantage of.

Horses.

The annual meeting of the California Draft Horse Breeders' Association was held at the University Farm, Davis, on May 29.

Letters have been received in Los Angeles from the depot quartermaster of Fort Reno Remount Department, Oklahoma, stating that his department wants to purchase at once a number of four-year-old colts and in the future will want a number of six to ten-year-old horses and five to ten-year-old mules.

Livestock Miscellaneous.

The National Livestock Association of Canada is establishing a ranching company with a capital of \$5,000,000, which has just purchased 492,000 acres of land in Alberta.

Governor Stephens, acting on advice from State Veterinarian Charles Keane, has raised the embargo on cattle shipped into California from Mexico and from the State of Illinois.

The average price for teams of work horses at an auction recently held in Linkoping, Sweden, was \$1,300, and a good single-harness animal brought \$675. There was a fair demand at even these prices.

The appointment of Chas. R. Thomas as manager of the livestock department of the coming fair at Los Angeles this fall assures its success. There is no man in the United States better qualified for the position.

Some Good Butter Records.

The following records have been made in the dairy herds of McAllister & Sons on a recent test: Seven-day records: Woodcroft Ybma Pietje, 31.28; K. S. P. Clorinda, 3 1/2 years, 29.39; Westview Aagie Colantha, 3 years, 28.56; Allenvall Daisy Walker, 4 years, 28.34; Etta Changeling Wildwood, 3 years, 27.24; K. P. Tola, 4 years, 26.94; Allenvall Clothilde Walker, 3 years, 26.60; Allenvall Pauline Walker, 3 years, 26.42; Orndyke Duchess Korndyke, 26.35; Westview Pearlle Alcatra, 3 1/2 years, 25.68; Maud Racheal Segis, 25.48; Forum Goldleaf Segis, 3 years, 25.20. Thirty-day records: Woodcroft Ybma Pietje made 124.02 pounds butter in thirty days; K. S. P. Clorinda, 117.15; Etta Changeling Wildwood, 109.25; Orndyke Duchess Korndyke, 109.23; K. P. Tola, 108.36; Allenvall Pauline Walker, 115.16; Maud Racheal Segis, 103.35. Among the two-year-old records that have been made are K. P. Baby Walker, 23.18; Segis Spring Farm Pontiac De Kol, 22.78; Queen Pontiac Butter Boy, 22.64; Allenvall Pauline Walker, 21.31; Allenvall Betty Walker, 21.02; K. P. Woodland, 20.68; Forum Goldleaf Segis, 20.15.

Stocks of Frozen and Cured Meats.

Frozen Beef—The total stocks of frozen beef reported in the United States by 265 firms on May 1, 1917, amounted to 98,826,285 pounds.

Cured Beef—The total stocks of cured beef reported by 280 firms on May 1, 1917, amounted to 35,573,221 pounds.

Lard—The total stocks of lard reported by 375 firms on May 1, 1917, amounted to 109,355,496 pounds.

Frozen Lamb and Mutton—The total stocks of frozen lamb and mutton reported by 147 firms on May 1, 1917, amounted to 4,337,455 pounds.

California Hog Book

A Practical Treatise on Hog Raising in California

By W. S. Guilford

Director of Agriculture, Sacramento Valley Irrigation Company and Practical Swine Breeder

First Edition—1916

256 pages of text; 31 pages half-tone engravings, besides line cuts. Cloth bound.

The author has had large personal experience in hog breeding, besides the opportunity of observing many plants in this and other States. He has brought together a wealth of practical and scientific information concerning the hog, its anatomy, the breeding, feeding, marketing, as well as diseases and remedies.

Contents by Chapter Titles

The Hog Industry. Hog Growing Conditions. Description of Hog. Judging and Selecting Hogs. Care of Boar. Care of Sow. Growing Pigs. Hog Feeds. Hog Feeding Suggestions. Hog Growing Systems. Hog Buildings. Hog Appliances. Handling Hogs. Hog in Health and Disease. Profit in Hog Raising. Markets and Marketing. Value of Purebred Stock. Breeds. Hog Breeder. Hog Breeding. Exhibiting Hogs. Home-made Pork Products.

Price, \$2.00, Postpaid

HOG CHOLERA

In introducing the Dorset-Niles method of immunization as recommended by the U. S. Government, the Stockyards Serum Company of Kansas City, through their representatives, Mr. L. B. Green and Dr. B. M. Leaf, wish the hog raisers of California to know of the splendid results obtained in the Imperial Valley by such firms as Timkin Ranch Co., Lyons Bros., Russell Bros. and Stuart, Hale Ranch Co., D. Messmore, Thompson Bros. and many others. For vaccination or serum see Green & Leaf, Hog Cholera Specialists, 401 Bryson Bldg., Los Angeles, California. Phone Main 1107. (Cut this out for future reference.)

LIVESTOCK BROKERS

CHICO'S FAIR ONE OF ITS BEST.

The Butte County Spring Exposition, which closed its gates last Saturday, was one of the most successful in its history. The total attendance was in the neighborhood of the 30,000 mark and the feature exhibits were of the finest. Rarely have so many head of high-grade stock been brought together in that part of the State as were assembled in the stock parade which took place on the last day. Over 300 purebred registered animals were on exhibition, representing the principal purebred stock farms of California.

Beef shorthorns were shown by H. L. & E. H. Murphy of Perkins and Jesse Bennett of Chico, who carried off the blue ribbons. Butte City Ranch was awarded first on senior yearling. In the dairy type of shorthorn, Alexander & Kellogg of Suisun led. Other successful exhibitors in this class were Murphy Bros., Butte City Ranch, G. A. Murphy and Jesse Bennett.

Among the contenders for Holstein honors Morris & Sons of Woodland carried off the trophy for best bull with Segis Pontiac DeKol Burke and other prizes. The prize for grand champion Holstein cow went to the Stanford ranch at Vina. The Henderson Co. of Sacramento took third on senior bull calf.

In the Jersey exhibit McLouth & Dads of Orland took first honors for grand champion cow and bull. S. F. Williams of Orland was a close competitor in this class. The Williams cattle were first prize winners along other lines, however. Other successful exhibitors in this class were Brooks Bros., Chico; Gurnett & Myhre, Orland; Orville Canfield, Chico; Mr. Reynolds, Chico; Chas. Leonard, Glenn.

The Black Hawk Stock Ranch carried off the award among shire horses. All awards on Shropshire sheep were given to the Butte City Ranch.

There was a very creditable display of swine of all types. The \$50 prize offered by the Butte City Ranch for best Berkshire sow bred by exhibitor went to Frank Brush of Santa Rosa. The Jas. Mill Orchard Co. took first on Berkshire aged boar. Frank Brush, Santa Rosa, took first on senior yearling boar and other awards. Butte City Ranch took second on aged boar and first on senior yearling sow. J. R. Cook of Paradise, Butte county, took most of the ribbons on Poland-Chinas. Among Duroc-Jersey swine Haden Smith of Woodland and H. P. Slocum of Willows divided the principal trophies. Maurice Rucker of Fair Oaks, T. L. Costa of Chico, W. V. Bennett of Chico, Karl Kioldstad and C. Van Orsdel also received recognition for creditable exhibits of Durocs. H. E. Richardson, Chico, took all Hampshire awards, and Harry Huffman of the same place took all Chester White awards.

Prof. J. I. Thompson of the University Farm, Davis, and C. W. Rubel, University of California, Berkeley, did the judging.

LIVESTOCK DIRECTORY.

Jerusalem Artichokes for Hog-Feed

To the Editor: Noticing a patch of waste land, I induced the farmer to plant Jerusalem artichokes there on. The land resembled your adobe, but of course got more rainfall than is common in California. The tubers took hold at once and made an amazing growth. As it happened, the season was unusually dry; but it was estimated that there were ten tons of tubers to the acre, the count being made by digging a measured patch.

Then the hogs were turned in to harvest the rest of the tubers. It proved to be splendid feed; and, with corn to finish them off, the animals slaughtered sound and sweet. The farmer esteemed it the cheapest hog-feed he ever raised.

There was a great crop of tops to die down and lighten that tough soil, and the hogs aerated the soil by rooting for the tubers. Next season, and the one after, the crop was nearly as good from remaining tubers growing.

With the tubers working in that soil for three years, the died-down tops to plow under, the mechanical work of the hogs, and the droppings,

that waste land turned up comparatively mellow and rich when finally plowed and seeded down.

I noticed in your State that the Jerusalem artichoke makes an amazing growth; and it suggests itself to me that my observations here in Pennsylvania might apply to parts of California possessing sufficient rainfall. I don't believe the plant would require an unusual amount of water to mature good tubers.

THOS. S. BLAIR.

Harrisburg, Pa.

[Jerusalem artichokes do very well in California, at least in our bay region, where they do not usually get irrigation. They are planted like potatoes, in hills about 3x4 feet apart, and on good ground produce as much as 50 pounds per plant. They are planted as early in spring as the ground is ready, for frost does not hurt them. They may be plowed out so soon as the tops are dry, and sold for human food as well as hog feed. Sacks that hold 125 pounds of potatoes hold about 95 pounds of artichokes. But on hog ranches the better way is to let the hogs harvest them, as suggested by Mr. Blair.]

A Model Hog House

[Written for Pacific Rural Press.]

Appearance of surroundings counts for much with the breeder of purebred livestock. Often the best of animals show poorly when housed in old dilapidated buildings. It was to overcome this, as well as to save labor, that A B Humphrey of Escalon built one of the most modern hog houses in the State. The building is a combination farrowing and fattening house, having 12 pens 10x12 feet on one side and 10 pens of similar size on the other side, separated by an eight-foot alleyway in the center.

The sides are studded and covered with rustic, a three-foot window being provided for each pen, as well as a door which leads to outside pens. The floor of the entire building is of concrete, board

platforms being used in the pens for sows so that they need not lie on the cold cement. The roof is provided with windowed ventilators which are all operated with a patented lever.

The alleyway has a concrete floor also, that slopes from the north to the south end, a dipping tank being sunk in the floor and covered with boards when not in use. On the east side two pens have been left out to provide room for a pair of scales, breeding crate and passageway to the feed barn which joins the building on the east.

By having water troughs automatically supplied from a trap outside of the building, all work can be done under cover, either with breeding or fattening stock, regardless of weather conditions.

Successful Beef-Growing in So. California

[Written for Pacific Rural Press.]

Sylvester Mendenhall, head of the Mendenhall Cattle Company, Escondido, Cal., recently furnished a Rural Press representative the following pithy points on beef raising in Southern California:

"I get all the lists of Aberdeen and Polled Angus stock raisers from the University of California each year. I send for, and buy up, their bull calves to use on my cows, which are all high grade Angus stock. I always use purebred bulls, however.

"The best time to get beef stock off the market is at about two years. After that, the cattle are too heavy for profit or to fill the Southern California demand. I always brand about 400 a year and figure off about 10 per cent for loss or stolen stock. In marketing, I ship four to five carloads at a time. I get better prices by shipping to Pomona than to Los Angeles.

"For feed, we depend on ranging altogether, having 11,000 acres for

ranging on Polamar mountains. No hay is raised for beef stock. I sold 11 carloads, 33 to a car, in September last, at 9 cents, at an average weight per head of 1,200 pounds. Everything goes when fat; nothing is held over.

"I have thought much about the baby beef question, as my 450 cows give me about 400 calves a year, but as I have not feed enough to keep them, I have dismissed the matter from consideration."

NO ILL EFFECTS FROM FROSTED SILAGE.

According to the experience of J. A. Pelanda of Stanislaus County corn can be silaged after freezing without any ill effects to dairy cattle. Last year Mr. Pelanda's corn got pretty badly frosted in the field but he went right ahead and cut it into the silo, turning a garden hoseful of water into the cutter while the machine was in operation. His

stave silo holds 65 tons and in the spring after the silage had all been cleaned out there wasn't a sign of moldy silage clinging to the lumber and he states that his cows ate the silage as readily as though it had never been frosted.

This year he has a crop of barley on his corn land which he will use in filling the silo part way so that he will have green succulent feed without pasturing till his corn is ready to harvest in the fall.

VETERINARY QUERIES

[Answered by Dr. H. B. Wintringham, Petaluma, Cal.]

[Subscribers wishing an immediate reply should send money order for \$1.00. No charge for questions answered through this department. Name and address of subscriber must accompany each query.]

Horse Becomes Thin and Wobbles.

To the Editor—What is the cause and treatment for a young horse which has been running on good, green pasture and has become thin, and when starting to walk its hind parts will swerve to either side?—E. N. D., Clements.

Give twenty drops beechwood creosote in half pint oil once a day for four days, then one teaspoonful fluid extract nux vomica twice a day for two weeks.

Ptomaine Poisoning.

To the Editor—We had some hams and shoulders which spoiled. We threw them out. Our little dog ate some of them, and a few days afterwards commenced to have fits. She foams at the mouth and acts like a mad dog. What can I do for her?—P. B. B., Lower Lake.

This is ptomaine poisoning. Give castor oil, one teaspoonful daily.

Colt Has Warts on Lips and Nose.

To the Editor—I have a yearling colt that has myriads of warts on his lips and nose. How can they

be removed? I have tried rubbing lard on, but it had no effect on them.—J. L., Elk Grove.

Paint warts with a two per cent solution iodine three times a day until they disappear.

To the Editor—Have a cow which calved seven weeks ago with acute inflammation of the milk passage; seems to affect only about one-quarter inch at end of teat; can get milk only with much effort and it hurts her. What is the cause, prognosis and treatment?—P. H. H., Linden.

This is an infection. Give one dram hexamethylamine in solution three times a day.

Cows' Bags Caked Often.

To the Editor—My cows are troubled with a caking of the bag; milk appears stringy and white. One-quarter of the bag is caked hard. I have let them go, and they always come out of it. I feed alfalfa and beet pulp. What is the remedy?—G. H. B., Hemet.

Give one dram hexamethylamine in solution three times a day.

A REMEDY FOR BLOAT.

For bloat in cattle, caused by alfalfa or green clover, I have found most effective a piece of small rubber hose, gently inserted through the esophagus to the stomach, through which the gas immediately escapes, without harm to the animal. Try it.

JNO. P. IRISH.

This method has been approved by many farmers. The hose should have a smooth end and be greased or vaselined to avoid irritation of membranes.

It should be remembered that a rubber hose is not a panacea and the operator should always be ready to use other remedies:

A wooden bit made from a short piece of wood and held bitwise by passing a string over the head causes the animal to keep the mouth open, thus causing the gas to escape.

A small cup of kerosene or turpentine in a quart of oil dosed into the animal is also recommended.

A dose of 40 per cent formaldehyde in a quart of water is a specific. Three tablespoons of formaldehyde in a quart of water for a grown animal, or one-fourth for a calf or sheep of this amount. Give through the mouth.

The use of a trocar and canula may be necessary. This instrument is used to puncture the rumen just below and in front of the hip bone on the left side of the animal. This puncture permits the gas to escape. Every farmer should be equipped to handle cases of bloat.

ANOTHER REMEDY FOR BLOAT.

I have read the remedies for bloat in cattle in the Rural Press. Have used all of them—even the knife, or trocar—but a big tablespoonful of pine tar on a rag and put on their back teeth will cure every time.—Peter Shorow.

A Lop-Sided Ration for Pigs.

While everybody in the country is trying to save every penny possible we are apt to be "penny wise and pound foolish" at times and this is

the case with a dairyman neighbor of ours who is raising a good-sized bunch of pigs.

The only thing that these pigs are fed is skim milk and besides this they have the run of a good-sized barnyard and the night lot of the milk cows.

They all look sleek and fat, especially just after separating them when they are fed, but they are not growing as they should because of lack of a little grain.

The skim milk that they are being fed is worth 30 cents a hundred at the present time, which is probably more than it is worth fed to pigs as they are being fed even at the present prices of pork. It would be worth more than 30 cents a hundred though if some grain were fed, even at present prices and the packer would doubtless be glad to pay enough bonus to offset the entire expense for grain. The only reason such an abundance of skim milk is fed is because it doesn't seem to cost so much as it is really worth, while barley seems to cost more than it is worth when you have to go out and buy it.

Killing Tules With Hogs.

Five brood sows and their pigs did such a good job of rooting and eating on a four-acre piece of lowland covered with tules on A. M. Biben's ranch in Stanislaus County that they practically cleaned off all the tules, and at the same time grew into good feeder hogs themselves.

The patch that Mr. Biben kept them on last fall and winter was a piece that was worthless for farming because of sub-irrigation, but after the hogs were taken out this spring he was able to get on to the piece and plow and drain it at small expense with the result that he has added four acres of tillable land to his ranch as well as a lot of pork money to his purse.

The stock ranges on the west side of the Sacramento valley are generally short of feed. Stock will soon be moved to the lowlands.

Save the Hogs

HOG CHOLERA CONTROLLED, providing you vaccinate your hogs with I. S. V. Co.'s 20 C. C. Standard dose Serum. Your hogs will be immune against cholera. Ten C. C. Serum add 1 C. Who Says No Labor Shortage.

To the Editor: Three of us have been running a ranch which includes 120 acres of fine river bottom. At the first rumor of food shortage, we advertised in the Rural Press and elsewhere for a man to run our dairy so we could farm the bottom intensively. We built a good house, in a good location, for the man we expected to get. We have had five men, our herd has been somewhat misused, we have worked under way requiring every hour of our time, and not a man in sight. And now for the proof: Not one of the men who have left have had any complaint as to the work, the pay, or the living conditions, except about trifles which amount to absolutely nothing, and were obviously merely excuses. Now we have a really good man, who came to investigate. He says the work is not hard, conditions O K, and pay fine; but he wants a chance to get a ranch on shares, with chance to buy it out of his share. He thinks now is a rare time for a man to get such a start. So he will turn down nearly \$100 a month, with house, garden, wood, water. We offer shorter hours and more pay than we give ourselves, and then we can't get a good man. If we don't find a man this summer who we think will stay for some years, then next year we will plant just what we can handle ourselves. We all know that when the food shortage is bad enough some of the real estate agents and lawyers will come back to work.—P. F. B., Escalon.

What White Laborers Want.

To the Editor: In the last issue of your paper you uphold a class of farmers who claim to be unable to carry on their farming unless they can run in a horde of Orientals to take the place of American citizens. It is all nonsense to claim white labor won't do the work as well as these Orientals. The American laborer wants to be treated humanly and have a place to sleep at least as good as the farmers' hogs, while the Oriental will be satisfied with any kind of quarters, and if the boss talks to him like a dog he shrugs his shoulders and pretends he doesn't understand. I worked for a number of farmers in the Stockton and Sacramento districts before I started ranching for myself and the conditions a man had to work under were worse than I have seen in any other line of work. If these farmers had their way about it they would have the men slaves. How many of them consider the man who is good enough to do the work is good enough to associate with him and his family?—Subscriber, Tulare.

Telling Farmers to Hunt a Job.

To the Editor: I note in the Press that a great grain dealer advises Petaluma poultrymen to sell their stock and go and hunt a job. Think of it, a man accustomed to the independent sort of life he has lived on the land going out to hunt a job working under another's orders! Perhaps if he gets a little money for his hens he might use it in hunting some of the hoarded stocks of grain said to be withheld for gambling purposes. He might take a gun along.—Reader, Santa Clara County.

Farmers' Produce Turned Into Poker Chips.

To the Editor: The great interest in the farmer now being shown by everybody, from President Wilson down, may result in much good. Drawing attention to the soil and things that grow, both vegetable and animal, is a good thing for the nation collectively and individually.

But why arouse the farmer to make strenuous efforts to raise more by family, or Oriental aid, or by use of city derelicts turned out of jail for the purpose, when the farmers' produce is to be converted into poker chips for gamblers, said gamblers being protected by law not to mention the power they have otherwise at their disposal. I note Mr. Hoover designates these gamblers "skunks." He owes the skunk family an apology for while the latter is socially unpleasant at least their pelts are of value.—C. M. M., Palo Alto.

Should Laborers Carry Wash Tubs?

To the Editor: If laborers were treated differently the farmer would have no trouble getting help. C. W. Kesner invited the Council for Defense to go to his ranch and see the conditions. He said some of the white men have not even a roll of blankets and if they take a bath once in two weeks they do well.

Does Mr Kesner expect a white man to pack a roll of blankets and a wash tub? There is a lot of places where the white man hasn't even a bunk house to stay in. A lot of them have to sleep in the barn. Why not treat laborers here in California as they do in eastern states, then you would have no trouble getting help? It's a shame the way farm help is treated here in California, Nevada and Washington.—S. P., Fresno.

A CHEAP CONCRETE SILO.

Mr. C. W. Mains of Corona, Cal., has a cheap and good all-concrete silo which he is very proud of. It is 16x30 and holds 119 tons of ensilage, and only cost \$2.80 put up on the place. In building it, first a concrete circular base was laid, then upon this base vertically 2x4's were placed and on the inside was tacked with small nails one layer of metal lath. Then on the inside was plastered a heavy coat of 2 to 1 mixture of sand and cement. After this was dry another coat of half and half was smoothly placed over that. Then all the 2x4's were taken down and bale wire strands were stretched and tightened around the outside of metal lathing. The wires

were placed every 6 inches apart at the bottom, and kept widening out to 2 feet apart at the top. After the wires were all stretched cement was plastered all around about 4 inches thick and so clear to the top.

To make such a silo takes 15 yards of sand and 120 sacks of cement. The door gap in silo is 2 feet wide and in this was placed (before being plastered) a 1-inch iron rod every 2 feet. This provided a good ladder. The doors are in 2x3-foot sections and fit in on a level one above the other. Mr. Mains has filled his silo twice with corn and says he never has a bit of silage spoil. The silo certainly looks like a good one. The State Sherman Institute, Arlington, Cal., has two like this, and likes them very well.

The average value of horses in Canada is about the same as in the preceding year, but milch cows, other cattle, sheep, and swine show a substantial increase, and return values that are higher than in any year since these records were started in 1909. Horses three years old and over average for Canada \$159, against \$160 in 1915; milch cows are \$70, compared with \$62; cattle between one and three years old average \$48, against \$38.

KODAK on the Farm

A Kodak fits into farm life from the pleasure side, from the business side and as a recorder of the familiar events that are so full of interest—the sheep washing and shearing, the haying and harvest scenes, threshing time, and apple picking.

It gives pleasure on every holiday—the grange and Sunday school picnics, the fishing and hunting trips, the circus and the fair—then there are the familiar scenes around home; the children and their friends, the family pets—there is good fun in photographing them at the time and afterward the pleasure of the pictures in the Kodak album.

And on the business side the Kodak helps to keep the important records in a business-like way—the building and ditching, the live stock, the orchard, the crops. Pictures of these things with an autographic record made on the film at the time of exposure are invaluable to the business-like farmer.

It's all very simple with a Kodak and less expensive than you think.

Ask your dealer or write us for free Kodak catalogue.

EASTMAN KODAK CO., 476 State Street, ROCHESTER, N. Y.

Rural Press Poultry Department

Poultry for Profit

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

Rabbit Questions.

How and what should we feed rabbits? Should they have green feed? Should the buck be allowed to run with the young? How old should a doe be before breeding? Is every month too often to breed them? We breed on second day after young is born; is that too soon?—Mrs. J. R. H., Exeter.

Taking your questions in turn twice a day is all right to feed except in case of does that have large litters, when it would be better to give a little at noon. What to feed is quite a large question, because it involves, what not to feed too.

Taking the what not to feed first, don't feed alfalfa that has been frozen, nor alfalfa with the dew on. Any other kind is all right. Next don't feed beet-tops—the beets are all right. Feed plenty of hay or green feed, a little rolled barley or whole oats and always keep a piece of rock salt in the pen and give plenty of fresh water. What to feed the does that are fresh is a little more particular; some people make no difference, but if you notice these are the people who lose so many rabbits and have what they call bad luck. Feed your fresh does, for a few days at least, milk and bread, rolled oats dry, the same you use for breakfast and a little wheat bran, along with carrots, cabbage or any other good thing you have and give both milk and water to drink, letting the doe choose.

What to Feed the Young.—When the young are three weeks old they will begin to eat and you can start them with a little rolled barley and green alfalfa or other greens, but beware of bloating from too much green feed.

The buck should be kept strictly by himself. It is a dangerous practice to allow him to run with young. A doe should be five months old, and six is better, before being bred. The male should only be left with a doe about two hours and should then be removed. If a doe is not with young she can be bred every ninth day until she is, but after she is with young the male should be kept away.

To your last question, would say: Your does will soon die under such treatment. Give them time to re-

cover and breed them when the young are three weeks old—not before.

Turkeys' Toes Turn Up.

We have young turkeys that when they are turned out in the field their toes turn over on the side. They were hatched in incubators. Please advise through Press.—J. E. T.

This is a bad season for young turks. Your turks have the rheumatism and yours are not the only ones that have it. Keep them in until the ground warms up in the morning and let them drink water in which you put 15 grains of Iodide of Pota. to one quart of water. Now measure it and get it correct and let them drink that until they go out every day until they are better. If you could add some kind of litter to the place they sleep in it would help, as the feet and legs should be kept warm.

INTERESTING POULTRY SUIT.

A suit of interest to the poultry people of Southern California has been filed in a Los Angeles court. The Poultry Producers' Association of Southern California, formed at the instigation of Harris Weinstock, State Market Commissioner, asked for an injunction restraining certain members of the Association from selling their eggs in the open market. The defendants are F. B. Church, Mrs. F. B. Church, Lowery Bros., and William Sharp. It is alleged that they agreed to sell the products of their flocks through the Association until 1920 and that they are not carrying out their agreement, but selling wherever they can get the best prices.

RECIPE FOR CHICKEN POX.

[Written for Pacific Rural Press by A. E. Hevener, Calexico, Cal.]

Take 90 pounds of bran and 10 pounds of sulphur; mix the two together, and feed it dry to your hens and turkeys for three days. Don't feed them anything else while you are feeding the bran. Then skip three days; and at the end of this period, if there are any still sick, shut them up and continue the bran three days longer. This is a sure cure, for I lost over \$100 worth of chickens and turkeys the year before I tried this recipe.

Also for gapes in little chickens, take a small feather, dip in turpentine and insert down the windpipe.

POULTRY NOTES.

Straw is high, but anyone who has a little alfalfa patch can spare enough short-cut alfalfa to furnish litter for the hens.

Stocks of eggs in cold storage in Los Angeles May 17, 1917, were 68,971 cases against 53,585 cases same date last year, an increase of 15,396 cases.

For catarrhal colds give a slight physic and make the birds exercise more. Exercise is the greatest medicine in the world for all ailing birds, for very often a good run that works up the blood dispels every trace of disease.

When hens begin to "go light," if they can be gotten out in the open and two small boys put to give them a run, they will often get all right, because the exercise starts the action of the liver and nearly all these things begin with congestion of the liver.

Purebred and Commercial

[Written for the Pacific Rural Press by Harry Mortenson, Suisun.]

Provide Shelter for the Hens.

We are now nearing the season of the year when Old Sol rules supreme and the poultrymen of the San Joaquin and upper Sacramento Valleys, as well as those in Southern California, must see that the fowls have some cool place to go during the heat of the day. Make-shift lean-tos of boards, brush or burlap are all that are necessary. To be convenient they should be high enough to allow the keeper to enter, because the hens delight to lay in out-of-the-way places, and unless you feel like crawling on your hands and knees, make your roof at least three or four feet above the ground.

Windbreaks may be placed under the above head, for where it is not hot during June the wind generally makes up for the heat. This is especially true in the Coast counties. These sea breezes are very refreshing, but often times are detrimental to young stock. The writer has seen young pullets try to get out of the house only to be blown against the wire fence. Avoid this by providing windbreaks.

Don't Ship Dumpy Stock.

The writer recently took a two-days survey of the San Francisco wholesale produce district to study the condition of the market. One commission man had several coops of broilers that were in an awful condition, and if they ever brought anything at all it is a mystery. The poor birds were all but sick, their wings hanging and their heads tucked in under them. If poultrymen ship such stock and expect big prices, they are sure to fall short of their expectations. Right alongside of this coop of culls were some number one stock, so lively that the coop could hardly hold them. They were sold at a premium above market quotation, after being in the place but a few hours, while the scraggly ones had been in the store for two days. Don't blame the wholesaler if you ship poor stock and get but little for them. All stock are sold on their merits.

Eggs Will Be High This Winter.

There are 30,000 more cases of eggs in storage in California than last year, but there are practically no eggs in storage in the Northwest and the storage crop of eggs in the United States is about 163,000 cases shy of normal. The United States Government is a heavy purchaser of eggs and poultry products and will continue to be all winter. This, together with the export trade and shipment east, will have a tendency to keep prices up. But on the

other hand, many housewives, foreseeing high prices this winter, have put down more eggs than ever, in waterglass and limewater. From the foregoing article it will be seen that the poultrymen must adopt the policy of "Watchful waiting."

Poultry in California On the Incline.

Fully 25 per cent more eggs came into the San Francisco wholesale houses this year than last, showing the poultry business is on the incline. The export of eggs to New York was a successful experiment tried out by the Central California Poultry Producers. A representative of the New York Department of Agriculture informed Mr. Romwell, president of the Central California Poultrymen, that California could produce five times as much poultry and eggs and still find a ready market for her product in the Empire State. California eggs bring more in New York than nearby henneries.

CHICKEN CHOLERA.

I think one of my hens has chicken cholera. Will you kindly give me your best prescription for this trouble?—R. P. M., Navelencia.

Thorough disinfection of houses and premises daily. For drinking give one to a thousand solution bi-chloride of mercury.

Poultry Breeders' Directory

Mrs. Best's Letter.

SUMMER WEAR FOR WOMEN.

My Dear Friends: Perhaps the newest things for women's wear that the exclusive stores are showing are the military capes. Capes for evening wear have been worn more or less for some time, but these are street garments. Many of them are of serviceable navy blue serge, with a vest front, and a tie girdle with a convertible scarf collar, while others are of gabardine or other modish cloths, full silk lined with gay pussy willow silk. The colors are varied, but blue, beige and gold are popular. Beige is one of the new shades this spring and is almost a sand color.

The summer suits are all of them much more snug than we have been wearing. The shoulders are narrow and the sleeves as tight as can be worn with comfort. The coats are medium long, except in some of the sport models and except for their being close fitting, really resemble the last season's garment a good deal. Braid for binding is very much seen and on the strictly tailored garment is very good looking.

For wear with these very mannish suits, there are high necked blouses that are worn with a stock of ribbon, many times black.

The majority of the blouses are open at the throat—many of them in the V-neck we have worn so long, while others have the new round neck and still others the square Dutch neck.

A perfectly adorable blouse in the Dutch neck had two frills, one on either side starting at the corner of the square opening, but for wear with the suits the frill in the center is more attractive. It gives a pretty fullness that is especially good this year, when so many of the coats do not button, but just meet in front and are held in place by a belt. Georgette crepe and crepe-de-chine still lead in popularity, although there is a new material that is called broadcloth taffeta that is heavy and makes beautiful waists in tailored styles.

If you have a dressy suit or one you want to wear for dress, it is a good plan to have a Georgette waist of the color of the suit. When the coat is removed, the effect is much more that of a dress if the color is the same. For wear under these thin blouses, you can purchase silk slips with high or low neck, long or short sleeves, for as little as \$2.50. These help the waist to set well and keep the underwear from being so noticeable.

Old lace, or lace in old patterns, is having a revival of popularity. It is used for dresses or as a trimming on blouses, scarfs, parasols and the like. Very pretty jabot collars are shown of lace—a band of lace forming the collar with a cascade down the front.

Underwear, both lingerie and silk are lace trimmed, and fashion experts prophesy a veritable wave of lace frivolities in flet valenciennes and other laces as soon as summer is fairly here.

Practically all the shops that carry women's apparel are having sales, which gives one an opportunity to pick up garments at the very beginning of the season at a very much reduced price. These sales are about a month earlier this year than usual.

THE HOME CIRCLE

Many of the jersey suits in good colors and styles are under \$20, and there are corresponding reductions in the more conservative garments as well.

Very attractive afternoon dresses in crepe-de-chine, in white, flesh and darker colors are not more than \$25.

Summer coats have been cut in price as well, and they range from \$20 for the unlined models in outing style on up in price for the silk lined more dressy garments. Some of these are made with the raglan sleeve, which is particularly good if you want to slip the coat over a suit.

ROSABELLA BEST.

CANNED SALMON.

Editor Home Circle: Will you give me a good recipe for canning salmon and also mayonnaise dressing?—Mrs. V. O. P., Concord.

Make a strong brine of salt and water, and after cleaning fish properly, place in brine for one-half hour; remove from brine; cut into convenient sections and pack in glass jars, with the skin on the outside. Add level teaspoon salt per quart; put rubber and cap in position, but not tight and sterilize for three hours in water bath outfit. Then remove jars; tighten covers; invert to cool and wrap the jars with paper to prevent bleaching when put away.

For mayonnaise dressing, take yolk of one egg, one teaspoon salt, one teaspoon sugar, one-half teaspoon mustard, dash of white pepper, three-quarter cup olive oil and the juice of one lemon. Put the yolk of the egg and the dry ingredients in a bowl and blend them together until smooth. Begin to put in the oil, a few drops at a time, and beat constantly with a Dover egg beater. Alternate the oil with the juice from the lemon until all has been used. When finished, the mayonnaise should be like a thick jelly. Salad oil may be used with a couple of tablespoons of olive oil added to it and the flavor will be very good.

WANTS CLEAN BRAN.

Editor Home Circle: Is the bran that we buy for feeding stock suitable for use in making bran bread?—J. N. G., Watsonville.

No. Feed bran is packed in burlap bags, and in shipping and handling, no especial effort is made to exclude dust and dirt, which would make it undesirable for human food. It is much better to buy the bran flakes in sealed packages or the bran put up in 10-pound cotton bags. These products are packed and handled so the user is sure of a clean product.

A NEW WORK BAG.

A very new work bag to carry knitting or other large fancy work is made out of heavy white linen or Indian head. Make the bag from 12 to 18 inches wide, according to fancy and about the same depth. Then from Turkey Red calico cut out the Red Cross insignia. Sow this to the bag so that the top strip of the Red Cross extends up above the bag and forms a loop through which the arm can slip. The bag is more graceful in shape if the lower corners are rounded off.

RHUBARB RECIPES.

Rhubarb Pie.—One pint rhubarb, cut in small pieces, two-thirds cup sugar, one teaspoon corn starch, one-third cup cold water, one teaspoon butter and plain pastry. Mix the rhubarb and sugar, and cook until the sauce is thick. Add the corn starch dissolved in the water and cook until clear. Add the melted butter. Make a pie shell by covering an inverted pie tin with pastry and baking for about 15 minutes. Then slip the crust from the outside of the pan to the inside and fill with the rhubarb mixture and heap meringue on the top. Brown the meringue slightly in a slow oven.

Baked Rhubarb.—Cut the rhubarb into small pieces and place a layer in a baking dish, sprinkle generously with sugar and alternate in this way until the dish is filled. Sprinkle sugar and grated lemon rind or cinnamon over the top with dots of butter. Bake slowly until well done and it will be a beautiful deep red color.

Canning Rhubarb.—Pack the rhubarb as tightly as possible into a jar. Fill the jar to overflowing with a heavy hot syrup made of twice as much sugar as water and cooked until the syrup threads from a spoon. Adjust the rubber and lid, but do not seal the jar. Sterilize the jar for 15 minutes on a rack in a covered pan of boiling water. The water around the jar should come up to within one inch from the top of the jar. Seal the jar, invert it on a cloth and allow it to cool. Store in a cool, dark place. This makes a good sauce or filling for pies. In a pint jar, place a layer of sugar one-half inch deep, then a layer of rhubarb of the same depth and alternate in this way until the jar is filled, having a layer of sugar on top. Adjust the rubber and lid and sterilize in boiling water as previously directed for 25 minutes. Seal the jar, invert and cool and place in a cool, dark place. This makes a rich sauce. To can without cooking, peel the rhubarb, and pack solidly without cutting, in an upright position. Fill to overflowing with water that has been boiled and cooled. Seal the jar and place where it is to remain. It is not advisable to move or disturb until ready to use. This must be sweetened when opened for use.

ENGLISH WALNUT PICKLES.

Editor Home Circle: Will you kindly send me a recipe for pickling English walnuts?—Mrs. E. A. F., Sebastopol.

Will some one of our readers furnish us with a tried recipe for this inquirer?

NOVEL RECIPES.

Editor Home Circle: A neighbor who has lived in the British West Indies taught me to drink lemon tea. This is made by steeping the dried leaves of the lemon tree and it makes a very pleasant drink. I also use as a substitute for butter, peanut butter, mixed with either Karo or strained honey, to the consistency to spread.—R. B. T., Orland.

Floral Department.

[By George N. Tyler.]

ROSE INSECTICIDES.

The following communication was sent to me to answer: "I am sending rose leaves with bugs on, that are affecting them very badly as they eat through the buds and three to four in one bud. Also on my petunias. I will appreciate any information you can give me regarding them and what to spray with."

I did not see the leaves or bugs, but my advice is to use an insecticide for chewing or eating insects. Use arsenate of lead or the ready-prepared commercial form called Disparene about two pounds to 50 gallons of water. (For rose bugs use at the rate of 10 pounds.) Paris green: Two pounds of quicklime, one-quarter pound of Paris green, 50 gallons of water. The lime helps to neutralize the caustic action of Paris green on tender foliage. Keep mixture well agitated while spraying. For sucking insects, use a contact spray—kerosene emulsion, carbolic acid emulsion, whale oil soap solution, tobacco tea or nicotine. Bulliac—known as pyrethrum powder—use the dry powder dusted on with a powder bellows when the plants are wet.

VIOLETS.

Violets that were planted last February and March are now making strong growth. Keep them well watered and cultivated and also keep off all runners till the end of July, then water regularly and keep them growing all the time and you will pick violets from October on. I picked seven good flowers from one plant today—with good stems, but the flowers were small.

SWEET PEAS.

Should have a mulch long before this. I cannot speak highly enough of shavings from a planing mill for a mulch and am using it extensively. A half-inch dressing is plenty and it keeps the moisture right at the surface. Ten days after watering the soil is moist under the mulch. Keep all flowers picked off and do not let them form seed pods, or they will soon quit flowering. Spray the foliage often to keep down red spider, and give abundant watering at the root twice a week.

DAHLIAS.

The old tubers that were put in cold frames a while back have made lots of shoots. These were taken off and put in sand as fast as they formed. I let them get from two to three inches long before I cut them. They rooted in about three weeks and are now ready to plant out in the blooming beds. These rooted cuttings make the fine exhibition flowers which you see in the exhibitions in the fall. Any good garden soil is good for dahlias, but a sandy loam is best. A good potato fertilizer is just the thing for them. If you can get lots of hardwood ashes, use it in place of the fertilizer, for they require a great deal of potash, same as a potato. When they show flower buds, put on a dressing of from two to three inches of half rotted manure and water through this. The more you water the more and better flowers you will have. To get the large flowers they should be disbudded before flower buds appear. Do a great deal of cultivation, as this helps them to form tubers for next year.

**When You Buy
Home Furnishings from Barker
Bros. in Los Angeles You are
Assured QUALITY Goods and
Not "Mail Order" Merchandise.**

Many concerns catering to mail order customers carry what is known to the trade as "mail order goods"—a grade made and designed to meet keen competition and afford highest possible margin of profit at the same time.

With Barker Bros. it is different. Merchandise intended for any kind of sale other than by regular selection on the floors of this store are never selected by Barker Bros., no matter how alluring the wholesale price or how great the possible profit from their sale. Every article distinguished by a place in our stock must first pass rigid inspection and possess the basic element of **QUALITY** which for nearly forty years has been associated with the offerings of this house.

The same high grade goods afforded Los Angeles people are open to the out-of-town buyer with every assurance of satisfaction as though selected in our store in person.

If you cannot visit our store, you will find it distinctly advantageous to buy through our **MAIL ORDER DEPARTMENT**. You are urged to write, telling us just what you want, etc. We will respond quickly, intelligently and courteously. We can save you money on furniture and everything in home furnishings.

Write for our 48-page catalogue of
Draperies, Floor Coverings, etc.,
just off the press.

WE PREPAY ALL TRANSPORTATION CHARGES to any railroad, express or parcel post point in the United States, within two hundred and fifty (250) miles of Los Angeles and make liberal allowance for transportation charges beyond 250 miles, anywhere in the world.

EUREKA, CALIFORNIA

Good Health.

[By H. E. Pastor, M. D.]

Don't Get "Nutty" on Nuts.

Nuts of different kinds are produced in large quantities in California, and inasmuch as they are a wholesome and palatable food their wider consumption should be encouraged. But discretion should be used. We have a class of dietists in our midst who are clamorous for a substitution of nuts and other forms of fruits and vegetables for meat foods, claiming that nuts are as nutritive as meat and nearly their equivalent chemically. While this may be true, the value of a food cannot be judged on its chemical composition alone. Nuts should not be eaten in amounts large enough to make up any considerable portion of a meal. They contain a large amount of fat and free fatty acid, besides a high percentage of cellulose, which is almost insoluble in the digestive juices. (Cotton and linen are examples of nearly pure cellulose and are practically indigestible.) It is also true that vegetable fats are not, as a rule, nearly as digestible as animal fats, and the ingestion of any considerable quantity of the former gives rise to disagreeable acid eructations. Most of us who have eaten a bag or two of peanuts, unmixed with other food, are quite familiar with this annoying after effect, even when the nuts have been well masticated.

So, while appreciating the great food value and palatability of nuts, and recommending their wider use, we would urge their incorporation in bread, meat and dessert courses, rather than their use as an exclusive diet or nearly so. There are a variety of ways of doing this, known to most capable cooks. Nut loaves, nut salads, nut croquettes and nut cakes, not to omit the nut sundae, all suggest themselves—the latter too frequently and too strongly to our young folks, perhaps. The point sought to be emphasized here, however, is not to be too trustful of the gospel of the nut diet as preached and practiced by extremists. Nuts are like cheese, while difficult to digest alone they promote the digestion of other foods.

No Rose Without Its Thorn.

Since the possibilities of successful rice culture in this State have been demonstrated, many of our people have become quite enthusiastic, as it adds another to the already long list of California's diversified products and is no inconsiderable item in the aggregate of the State's annual agricultural wealth. But the introduction of this new industry gives rise to another problem not so pleasant to contemplate. The May Bulletin of the California State Board of Health has this to say on the subject: "The acreage planted to rice in California this year is said to be twice that of 1916. This will double the problem of mosquito and malaria control in the rice fields and will provide a rich realm for investigation into methods of control. The need of discovering adequate means for eradicating mosquitoes from the rice fields of California grows each year and the malaria problem in the interior valleys of the State does not diminish. Since the most favorable

COOK
WITH
PEARL
OIL

LESS WORK

No coal, wood or ashes to lug. No waiting for the fire to burn up. Meals in a jiffy and a cool kitchen all the time. Bakes, broils, roasts, toasts. Better cooking because of the steady, evenly-distributed heat. More convenient than a wood or coal stove for all the year 'round cooking, and more economical.

The long blue chimneys prevent all smoke and smell.

GEO. N. TYLER,
Brookdale Nursery,

Los Gatos.

SAN FRANCISCO.

San Francisco, May 30, 1917.

WHEAT.

Further declines in receipts of wheat were offset by a marked falling off in the demand for this grain, and quotations showed a further tendency to weaken during the past week. Russian red stock continues the weakest item in the list. Most of the dealers here expect still further declines.

Sonora wheat, re-cleaned.....None offered
Northern Club.....None offered
California Club, per ctl.....None offered
Northern Bluestem.....\$5.00@5.20
Northern Red.....4.95@5.15
Russian Red.....4.90@4.95

BARLEY.

While there was a little more activity in the futures section of the local barley market this past week, the noticeable easiness in the spot trading continued as prominent as before. Quotations on spot good closed at a loss of \$2 per ton over the previous week's figures, and buyers of round lots were getting concessions from these quotations without any trouble. Reports from interior sections indicate that there will be a heavy barley crop than had been at first anticipated.

Shipping, ctl.....Nominal
Brewing.....Nominal
Choice feed, ctl.....\$2.35@2.40

OATS.

With very little stock on hand for sale, and this of not very good quality, it was only natural that quotations on white feed oats should show a slump during the week. Stock offered at \$1 per ton less than on the previous week failed to attract bidders, and lower offers are looked for shortly.

White feed, per ctl.....\$2.70@2.80

BEANS.

The cleaning up of good stock in several varieties was responsible for the peculiar situation of a decline on beans this past week, with hays and pinks the varieties declining from this cause. Garbanzos and Mexican reds suddenly came into shipping favor, and both of these varieties were advanced under a good outside call. Spot quotations for the rest of the bean list were generally unchanged. Reports from growers in various sections indicate generally satisfactory progress on the new crop, and there was no sign of any let-up on the part of brokers in an effort to sign up the new crop acreage. Slightly firmer prices on futures were noted, with a flat figure of 10% on limas and 10%@10% on both large and small whites. Blackeyes were being contracted for at 9%@9% per pound.

Bayos, per ctl.....\$1.50@1.85
Blackeyes.....9.75@10.00

Tepary beans.....None offered
Garbanzos.....\$6.75@7.00

CORN.

Eastern corn was put on sale in quotable amounts here this past week, with yellow commanding \$3.30@3.35 and white \$3.40 per cental. This had no effect on the quotations for sacked California goods, but did cut into the quotations on Egyptian maize. A few lots of off-grade Milo maize were offered, but failed to find a buyer.

(First-hand prices on strictly first-class grain, San Francisco.)

Eastern Yellow, ctl., bulk.....\$3.30@3.40
California, sacked.....\$3.45@3.50
Milo Maize.....None offered
Egyptian.....\$4.15@4.25

HAY.

Receipts of hay last week showed quite a falling off when compared with the preceding weeks, being 1039 tons as compared with 1135 tons for the preceding week and 1582 tons for the week before that. Shipments were confined largely to old crop hay from interior warehouses, although some first cutting alfalfa hay was received here. Consumers bought more freely of the former type, evidently preferring to use up the old crop on hand before starting on this year's hay. The approach of the new hay season was reflected in weaker prices, and a further decline is looked for this coming week. The new cutting alfalfa is going into local warehouses in small quantities. General business has been quiet, as is natural in the between-crops season. However, the current receipts are running well up to standard, so there is nothing to fear for the future market tone. Export business has been up to normal, and will be supplied with old crop hay for several weeks to come. Weather conditions continue to favor the growing crops, and every day it becomes more apparent that there will be a larger output than had been at first expected. There is a growing demand among the dairymen for alfalfa hay, and a number of them have already contracted for their season's supply. This is reflected in a narrower range on first cutting alfalfa hay in this week's list.

Wheat, No. 1.....\$28.00@31.00

Straw, per bale.....1.00@1.10

FEEDSTUFFS.

But one change of note occurred in the feedstuffs list this past week, although prices throughout were generally easier. The plentiful supply of green feed in interior sections naturally cut into the demand here for this line, and the call was markedly slower. Coconut meal registered a decline during the week, with

more changes of the same type looked for on other items in the list.

(Per ton, San Francisco.)

Beet Pulp, per ton.....None offered

POTATOES, ONIONS, ETC.

Old crop potatoes are practically cleaned out of the local market, only Oregon Burbanks remaining on hand in quotable amounts, and trading interest has naturally turned to new potatoes. The latter were easier at 3 1/2@4 1/2c per pound under very much increased receipts, with Oregon stock commanding as high as \$4.75 per cental on the wharf. There is always a certain percentage of the San Francisco trade which will not buy new potatoes until forced to, and it is this class which sent the price of Oregon up. Onions also eased under heavier arrivals. In the general vegetable list there was an easier tone noticeable, partly the result of heavy offerings and partly the result of a slower call. As the fruit season reaches its height there is always a slower sale for vegetables. Asparagus, string and wax beans and summer squash all sold at easier prices. San Jose rhubarb was on poorer grade and failed to bring over \$1.25 per lug box.

Asparagus, per box.....\$1.50@3.10

POULTRY.

Generally speaking, poultry quotations last week were steady to firmer, with only two types showing price changes of a quotable nature. The market has been insufficiently supplied in several lines, and advances on broilers and hens were noted during the week. Shipments from poultry producing sections have not been so heavy the last two weeks, probably the result of the lower feedstuffs prices.

Special Citrus Market Report

Los Angeles, May 29, 1917.

Shipments of citrus fruits from Southern California from November 1 to May 27: Oranges, 25,885 cars, and lemons, 4557 cars. Same time last year: Oranges, 21,296 cars, and lemons, 3,709 cars.

Shipments of oranges from Central California from November 1 to May 27, 4,075 cars, and lemons, 164 cars. Same time last year: Oranges, 5,178 cars, and lemons, 146 cars.

Shipments of oranges from Northern California from November 1 to May 27, 845 cars, and lemons none. Same time last year: Oranges, 610 cars, and lemons, 1 car. There was fair life and a stronger tone to the eastern markets the past week. Shipments were very good, heavier than a year ago, but the demand was sufficiently strong to influence an advance on all oranges. Oranges sold better than for some weeks and brought more money. Lemons also showed more life, but the cold weather prevented them from selling much higher.

Locally there is no change from a week ago, while the tone of the market was better, in sympathy with the improvement

BUTTER.

Butter quotations continue to advance. A renewed Eastern demand was responsible for the local gains. Los Angeles and the Pacific Northwest also bought freely, and helped to send prices in this market up. Eastern shipments for the week were seven cars from San Francisco and three more direct from interior points of production. Los Angeles bought more than 100,000 pounds here and Seattle and Alaska business accounted for as much more. The present market depends largely on the behavior at outside points now, as it could never be maintained at this level with only San Francisco business to be considered.

EGGS.

A brisk shipping trade and lighter receipts, the result of unfavorable weather conditions in producing sections, contributed to higher prices on eggs during the past week. Storage holdings increased to 108,000 cases during the week, as compared with about 94,500 cases for the same time last year. With Eastern markets advancing as they have been for the last week and Alaska orders holding up to present volume for another month, there is every reason to look for higher prices here.

Fancy Calif. Flats, per lb.....22c
Monterey cheese.....22@24c

DECIDUOUS FRUITS.

Increased offerings and a wider range to choose from brought lower prices on all deciduous fruit lines except apples during the past week. New offerings were watermelons and new crop apples, but neither were received in large enough quantities to warrant quoting.

Apples:
Bellflower, box.....Not enough to quote
Newtown, fancy.....\$1.50@1.75

east, the cold weather caused buyers to hold back and the market was dull throughout for everything. What buying done by packers, was at old figures. Oranges 1@1 1/2c per pound in the grove, picked. Grapefruit in good supply and slow sale at 1 1/2@2c per pound in the grove, picked. Lemons still 3/4@1c per pound in the grove picked for good stock.

AUCTION SALES.

New York, May 28, 1917.—Forty-seven cars of oranges, four cars lemons sold. Market strong and higher on oranges, steady on lemons. Corresponding day last year, thirty-six cars of oranges were sold. Market was from 10@25c higher. California navel oranges averaged \$2.20@3.50. Lemons averaged \$2.85@3.35.

Boston, May 28.—Twenty-six cars sold. Market is doing better both on oranges and lemons. California navel oranges averaged \$2.10@3.50. Lemons averaged \$2.65@3.75.

Philadelphia, May 28.—Nineteen cars sold. Market stronger and higher on oranges. Lower on lemons. California navel oranges averaged \$2.15@3.10. Lemons averaged \$2.90.

THE WALNUT FREIGHT RATE SITUATION IN A NUTSHELL.

In arguing for a reduction in the freight rate on walnuts last week before the Interstate Commerce Commission in Los Angeles, Secretary C. Thorp of the California Walnut Association claimed it was excessive. It is necessary for the California grower to fight all the time for a market in the East, where he comes in competition with foreign growers. It was said that California produced 40 per cent of the walnut crop of the world. The only available figures show that the foreign crop last year was 36,000,000 pounds and that California produced 27,000,000 pounds. It was shown that the importation of walnuts had increased since the beginning of the war. It has been estimated that in California the average yield of walnuts per acre is about 625 pounds. Mr. Thorp declared that California growers are paying a higher freight than foreign importers, and that the rate of \$1.40 per 100 pounds is discriminatory. The freight on foreign walnuts from New York to Kansas City is said to be 63c per 100 pounds, while from Los Angeles to Kansas City it is \$1.40 per 100 pounds.

LOS ANGELES.

Los Angeles, May 29, 1917.

BUTTER.

Receipts of week ending May 29.....351,660
Receipts of same week last year.....304,810

There was a better movement the past week and a stronger market. The higher prices drawing increased receipts, which were better than the same week last year. The advancing markets east encouraging buying and caused buyers to bid prices up. Extra advanced up to Monday 2c, though the close on that day was weak. There was in cold storage here, May 24, 1917, 130,874 pounds, 35,368 pounds more than the week before and 54,219 pounds more than the same date last year. This accumulation represents the better receipts rather than speculative holdings. The consumptive demand showing no improvement and there being no shipping inquiry, the excess went into storage.

EGGS.

Receipts (railroads) for week ending May 29, 1917, 2,326 cases.
Receipts (railroads) for week ending May 29, 1916, 2,965 cases.

The past week brought little change in this market. The receipts continue to run lighter than a year ago. But the demand being only fair and largely confined to the consuming trade, which was not heavy, the high prices checking consumption, it was pretty much a one price market. There was no buying for cold storage, what accumulation in store representing carryovers by receivers. There were in cold storage here May 24, 1917, 72,470 cases, 3,605 cases more than the week before and 17,592 cases more than the same date last year. The receipts of fresh ranch for the week ending Tuesday were 2,326 cases and 400 cases of Petalumas. The same time last year the receipts of fresh ranch eggs were 2,965 cases.

POULTRY.

The market the past week brightened up. There was a better demand than for some weeks and broilers, fryers and heavy hens were all advanced 1c. Receipts not so heavy and the consumption seems to be improving. Light hens continue dull and unchanged. Roasters selling fairly and so are ducks. Not many coming in.

We quote from growers:
Broilers, 1 1/2 to 2 lbs.....22@23c
Fryers, 2 1/2 to 3 lbs.....23c
Hens over 4 lbs.....19@20c

Squabs, live, per doz.....\$1.50@3.00
Dressed.....8.75@9.25

VEGETABLES.

The market the past week was better supplied and the tendency of prices was downward. New potatoes are coming in quite freely and are sharply lower. Cabbage is off again and dull. Receipts liberal and shippers buying sparingly. String beans are lower and so are peas and both slow sale. Onions dull, but unchanged. Cucumbers quiet and weak. Summer

THE BUTTER MARKET STRUCK BOTTOM AT 33 CENTS.

Readers of the Pacific Rural Press interested in the butter market may have noticed the 33 cents quotation in our May 5th issue. It is probable that butter prices, for this season at least, reached bed-rock in that quotation. Due to dry weather and high-priced feed, butter production is now below normal in quantity, and likely to continue so for many months to come. Another fact which seems to argue that butter touched bottom at 33 cents, is that large quantities of this commodity began to go into storage when this price was reached. Every dairy market in America registered advance prices during the past week, and again the possible starting of San Francisco storage activity has been deferred by the skyrocketing rates.

squash sharply lower and dull. Coming in more freely. Some new tomatoes in from the Imperial Valley and they met with a fair demand. Asparagus steady but slow sale.

BEANS.

It was very quiet in this market the past week. Stocks being light, prices were held steady.

We quote from growers:

Limas18c
Large white17c
Small white16½c
Pinks13c
Blackeyes10½@11c

HAY.

The market brightened up the past week and showed more life than for some time. The receipts were the best for weeks and the offerings of very good quality. The first time for weeks both the city and country were in the market and showed more willingness to take hold. While prices show no change, the market may be called firm for all choice hay. Receipts for the week, 119 cars.

We quote f. o. b. Los Angeles, old crop:

Barley hay, ton\$21.00@23.00
Oat hay, ton22.00@24.00
Alfalfa, northern, per ton18.00@19.00
Alfalfa, local, ton20.00@21.00
Straw, ton11.00@12.00

FRUITS.

There was little change in this market the past week. The only new thing on the market being figs from the Imperial Valley. They coming in now every day and meeting with a fair demand. Apricots were in little better supply and market weaker, but demand fair. Loquats are off a little but selling fairly at the prices. Cherries were slow sale and weaker. The cold weather affected the market for all fruits.

We quote from growers:

Avocados, per doz.....\$4.00@5.00
Loquats, per lb.5@8c
Cherries, black Tartarians, per lb.10@13c
do, Chapmans9@10c
do, Soft White, per lb.5@7c
Gooseberries, per lb.7@8c
Apricots, per 4-basket crate, as to pack\$1.20@1.50
Figs, Imperial Valley, 7-lb. box.....\$1.75

BERRIES.

All berries are now coming in quite freely. The cold and backward weather was against the free ripening of strawberries and the market supply was not so heavy and market a little stronger. Demand very fair. Raspberries, loganberries, and blackberries were all in better supply and the market worked lower. Demand fair at the prices.

We quote from growers:

Strawberries, poor to choice, 30-basket crate\$1.00@1.20
do, fancy, 30-basket crate.....1.30@1.40
Blackberries, per 30-basket crate. 2.00@2.25
Raspberries, per 30-basket crate.. 2.10@2.30
Loganberries, per case1.75@2.00

HONEY.

There is some little orange honey being extracted and marketed, but no sage or alfalfa as yet. It is said that the orange honey crop in Southern California will be only half a crop. White sage promises a little more than half a crop and the amber crop will be still better. But the whole crop will be much shorter than last year. White orange honey at 12½c per pound is about twice as high as last year at this time. Dealers naturally at the high price are buying cautiously, as the demand from the east is very light at the prices now being asked.

Special Livestock Market Report

San Francisco, May 30, 1917.

CATTLE—Prices rule firm in the cattle market as a result of the invasion of the local market by Northern buyers and shipment of beef cattle East. Quotations are stationary, however, though it is unlikely that they will reach a lower level. Elsewhere than in California there is, generally speaking, a sharp advance. The glut of veal calves is easing up and prices have advanced about ½c.

THE POTATO SITUATION LOOKS GOOD IN CALIFORNIA.

The condition of the potato market in all distributing centers in California continues good. While the stock is a little easier owing to increased supplies, prices tend to hold the high levels which have prevailed for some months past. The early potatoes in the San Pedro hill region near Los Angeles are now about harvested. This crop is turning out better than was expected. The same is true of the yield in the Colma district of San Mateo county, which is another of the early potato sections. Alameda county potatoes are larger this year than last and the yield correspondingly more abundant. The potatoes in all sections of the State have been late this season, especially in the Santa Clara Valley, owing to unfavorable weather conditions. It is estimated that the Delta acreage is this year about 28,000 acres. Notwithstanding these unexpectedly favorable reports of the potato yield, the market is strong and prices recede but little. Inquiry for supplies is active both for consumption and for seed for late planting.

Los Angeles, May 29, 1917.

CATTLE—The market situation here is much the same as a week ago. Killers while all in the market the past week were not urgent buyers, though paid steady prices for what cattle taken. Feeders are rather independent where they are well provided with feed, being influenced to hold their cattle by the high markets east. Where feed is short feeders are willing sellers at quotations.

Calves continue dull and weak.

Per cwt. f. o. b. Los Angeles:
Beef steers, 1000 to 1100 lbs.\$9.00@9.50
Prime cows and heifers7.00@7.50
Good cows and heifers6.50@7.00
Calves, per cwt8.00@9.00

HOGS—Receipts continue light and made up mostly of half-grown and partly fatted. Heavy well finished hogs scarce and killers bid up prices of all such hogs \$1.00 per cwt. the past week, and failed to get any great number even at this advance. The eastern markets continue so high as to draw hogs now from Arizona and even some shipments have been made from the Imperial Valley east, thus cutting down the supply heretofore available for this market. California alone furnished what hogs coming in the past week.

Per cwt. f. o. b. Los Angeles:
Heavy, averaging 250@300 lbs.\$12.00@12.50
Mixed, 200@250 lbs.13.00@14.00
Light, 175@200 lbs.13.00@14.00

Rough docked 20 pounds, piggy sows 40 pounds and stags 40 per cent.

SHEEP—A steady and rather firm market was had the past week for both sheep and lambs. Killers seemed a little more anxious for supplies, but while bidding a little more freely refused to advance prices.

Per cwt. f. o. b. Los Angeles:
Prime wethers\$ 9.00@10.00
Prime ewes9.50@10.00
Yearlings10.50@11.00
Lambs13.00@14.00

North Portland, Ore., May 28, 1917.

CATTLE—Today's receipts totaled about 700 head, which were mostly all grassers of ordinary to fair quality. There were only a couple of loads of real good beef here. Demand was mostly from Valley butchers, of which there was a long string. Prices for the day were on a good strong basis compared with last week's close. Live killers are all well supplied at present on account of the heavy receipts last week. Best beef steers brought \$9.50 to \$10.00.

HOGS—Hog market was generally steady with a fairly good supply. A few lots of light hogs brought \$15.80 to \$15.75, with four loads of strictly fat 225 pound hogs brought \$15.85 to \$15.90. Pigs were unchanged, bringing \$13.00 to \$14.00.

SHEEP—The sheep market is unchanged. There was only one bunch of valley sheep here today; good spring lambs brought \$13.50 with shorn ewes at \$10.50.

Two Sizes—Models S-25 and R-12

SAMSON SIEVE-GRIP TRACTOR CO., Stockton, California.

The Mogul Kerosene Tractor in a New Size

IN 1915 we introduced the Mogul kerosene tractor in a two-plow size. It met with instant and continued approval, so much so that it has far outsold all other tractors of its rated horse power put together.

We now offer Mogul 10-20, the same popular and efficient type as Mogul 8-16, enlarged, improved, built to draw three plows instead of two. No changes have been made in design except the few indicated by experience, or made necessary by the higher power.

The engine is larger, but it is the same efficient, slow moving, kerosene-burning type. The transmission is changed to give two forward speeds instead of one. Mogul 10-20 travels 1.8 and 2.5 miles per hour. The same simple, safe chain drive is used, the same good force feed mechanical oiler. In all essentials Mogul 10-20 is the reliable, dependable, economical Mogul tractor you have heard so much about from your neighbors, or know so well by experience.

Booklets and folders with full descriptions of the new Mogul 10-20 are now ready and will be sent by return mail on request. When you write for them, address

Necessity of Bees on Cherries, Plums and Prunes

[Written for Pacific Rural Press.]

MOST remarkable demonstration of the necessity of bees to pollinize cherries, plums and prunes was made this spring in the orchard of R. W. Skinner of Sutter county. Branches from which insects were excluded by coarse mosquito-netting set practically no fruit, while the rest of each tree and those around them are loaded heavier than ever before. It is the first year that bees have been kept in the orchard.

On March 15, before the buds had swelled, Mr. Skinner, with W. F. Bird and W. M. Strange, chose cherry, plum and prune trees in various parts of the 80-acre orchard and sewed the netting around branches on which the fruit buds had been counted. These blossomed full, along with their neighboring branches and trees. On May 18 these branches were cut off in the presence of Sutter County Horticultural Commissioner H. P. Stabler, along with branches adjoining them, and taken to the latter's office, where we saw them. The branches not covered were all heavily loaded, similarly to the rest of the orchard, which we saw later. Some trees had fully 400 pounds of cherries on them.

A Bing cherry limb 8 feet long was covered with mosquito netting for 7 feet, leaving the lower foot uncovered. It was loaded with fruit up to the net, while there were only three cherries on the 7 feet, on which over 150 fruit buds had been counted. A Royal Anne branch 5 feet long had 70 buds when covered with netting, March 15, but not a cherry was set.

A French prune branch 2 feet long from a four-year tree, having been netted, set just one prune, while an adjoining branch had set 16 prunes on one foot of two-year wood and one prune on the one-year wood. The whole tree had a tremendous load. A Tragedy limb 2 feet long, and much branched, had 80 buds under the net, but set only two plums. The rest of the tree was loaded, one limb having 23 plums in a foot near the tip and another having 26 plums in ten inches.

A Robe de Sargent had 130 buds under the net and set two prunes, while the limb next to it hung with prunes as thick as they could stick and averaging $\frac{3}{4}$ inch long. A Black Oregon branch had 45 buds in 3 feet when covered, March 15. It set two cherries, although this variety is recognized as a splendid pollinizer. The rest of the Black Oregons were full of cherries.

BEES CREDITED FOR HEAVY CROP.

An upright growing strain of Royal Annes nine years old had not borne until this year, when practically all limbs fruited except a branch 4 feet long enclosed in a net, where there was not a cherry, though it had 90 buds.

Though crops are this year generally good in that vicinity, bees are given credit for most of the heavy setting. Most everybody or his neighbor got some bees last spring, so that the country was well supplied with them. Yet we could see a noticeably lighter crop in a neighboring orchard, for, as Mr. Skinner says, bees prefer to work as near home as possible. Four-year French prunes had never fruited heavily before, nor had the upright Royal Annes.

The illustration above shows a fruit branch from which the pollenizing bees had been excluded by coarse mosquito netting.

BEES ON 80-ACRE ORCHARD.

One hundred and thirteen stands of bees were placed in two lines lengthwise of the orchard, about 24 rows from each edge. The lines run east and west because prevailing winds are from north or south. Bees fly against the wind, so they may return with it when loaded. The stands were placed where the earliest morning sun would strike them.

Mr. Skinner suggests a rough estimate of the work cut out for his bees. There are 2800 per pound and three to five pounds per stand. Generally 10,000 bees are figured per stand. Thus 1,130,000 bees had the orchard for pasture. If one Tragedy plum sets out of ten blossoms, a crop of 3000 plums per tree indicates 30,000 blossoms. Cherries might have ten or twenty times that many. Imperials have perhaps 125,000 blossoms per tree. And so on. Assuming 30,000 blossoms per tree for the 80 acres of perhaps 6400 trees, the million bees would have 192,000,000 blossoms to visit if they didn't go out of the orchard.

Summer Fruit Budding

[Written for Pacific Rural Press.]

Budding one variety of fruit onto another has been done all the way from March 31 to October by

R. Burton of Vaca Valley, who has long been known as one of the leading plant breeders in California. He buds his new seedlings onto older trees in order to hurry up their fruiting to see what has been developed and to test his new varieties. The best time, says he, is during August, because buds put in earlier may be overgrown by the older wood to a certain extent. Still, he showed us a Formosa bud, put in about April 8, which had grown three inches by May 8.

A branch, to be budded, should have sap flowing freely enough so the bark will peel clean from the wood easily. To get such branches close to the crown of a tree that is to be worked over by budding, cut back the limbs (preferably in winter, and leaving one limb to take the sap for a year). New sprouts will grow from the stubs if they are not killed or weakened by sunburn, which should be prevented by immediate application of white-wash.

To get plump buds, pinch off the end of a desirable shoot on which there are dormant buds in the leaf axils. If shoots have already started from a deciduous fruit bud, it is of little value for propagation. On an apricot, for instance, to get suitable buds it will be necessary to cut off the branch below the upper spray of laterals. In a day or two after pinching tips or cutting off such a spray the dormant buds will commence to swell. When this is noticeable,

and the buds are plump but not yet broken, do your budding. Dormant buds just starting on old bark are all right for propagation.

Cut the twig with several buds on it and do not allow it to dry or its bark to shrivel. Do not cut the buds from it until ready to insert them under the bark of the stock. Then make a vertical cut with a sharp knife (budding knife preferred) about $1\frac{1}{2}$ inches long at a smooth place on the bark of the stock and proceed in the usual manner.

This cut shows the result of the experiment. The blossoms of the branch on the left, which had been enclosed, set practically no fruit, while adjacent branches to which the bees had free access bore more fruit than usual, as illustrated by branch on right. This small orchard experiment, which any grower can make for his own satisfaction, supports the large demonstration made in the Santa Clara Valley by the University experts last year and reported in these columns last January.

PROLOGUE.

WEARYING not a little of the heavy, five-act agricultural tragedies which we have recently fallen into the habit of presenting in these columns, and in the course of which we have been howling forebodings which made the ululations of Cassandra, the grouch-queen of ancient tragedy, sound like ragtime syncopations—we turn this week to a run of one-act dramas which, for the sake of continuity, which should thread all proper editorial discourse, we shall tandem along this theme: Things Which Are Coming Our Way.

HOW TO DO REAL ESTATE.

GVERNOR STEPHENS has signed the Land Settlement Act passed by the Legislature, as noted in our issue of May 5, and has thus assured the operation of the plan for righteous subdivision and settlement of farming lands in this State devised by Dr. Elwood Mead and his colleagues of the Commission on Land Settlement and Rural Credits appointed by ex-Governor Johnson. It is in fact a blue-sky law on selling farming land, with the very important difference that it does not tell sharks and shysters what they shall not do (as is the common method with blue-sky laws), but is designed to show honorable and well-meaning subdividers what they can—in fact, what they ought to do, for the success of their clients and the good of the State. As this undertaking has become a part of the statute law of California by the patriotic act of Governor Stephens, and as some of our readers, in the rush of things peaceful and war-like, may not definitely remember what it is all about, we reproduce a rough outline of its provisions, which we set forth in our issue of May 5:

The State will embark in an entirely new enterprise by which it is hoped to encourage the settlement of small, improved farms by qualified persons of moderate means. The administration of the act is to be carried out by an unsalaried board of five members and an appropriation of \$260,000 will be placed at the disposal of the board to purchase 10,000 acres of unimproved lands selected for good farming quality. The board is authorized to make necessary improvements and to subdivide the tracts and sell them to selected settlers, on loans with amortizing payments extending over a period not to exceed forty years, and with the right to repay the loan any time after five years. Unless the applicant is prepared to pay half the purchase price of his allotment, he would be required to apply to the Federal Farm Loan Bank at Berkeley for 50 per cent of the appraised value of the land and 20 per cent of the value of the improvements, and the State will lend him additional money for his outfit, as he may require. It is calculated that the \$260,000 advanced by the State will be returned within fifty years, with interest at the rate of 4 per cent.

Thus the State will advance fairness, honesty and humanity in farming land transactions and be repaid with interest for its investment in the enterprise. And this anticipated outcome, of course, will matter not so much that the next generation will get our money back into its pocket,

but that it will have the demonstration in its heart and brain that honesty is the best policy in land business as in all other. And now it will be the interesting joy of all of us to see how this theoretically noble undertaking will work out. Nothing can be expected immediately, for it will take time to embody it in transactions. An administrative board must be selected by the Governor: this board must find itself in practical operation: land must be selected and bought: subdivision and fitness for planting must be provided, etc. Some months must elapse before the State can announce that it is ready to listen to the desires of customers. And while this is developing it is fortunate to be assured that there is one thing involved in this State enterprise which will begin to operate at once and will work in daylight and in darkness from this moment onward. It is the principle of it: the nobility of its humane purposes: the soundness of its economic motive and method: the real sublimity of its simple religious faith that to be good one must do good and help his fellow men thereto.

THE APOTHEOSIS OF THE REAL ESTATE.

AND NOW, while it goes forward to demonstrate by its own enterprise how farm-land settlement can be most successfully done with honest motive and method, it is important to know that the State has also spread a blue sky over legitimate and honorable private land dealing in California. This also has been secured through the last Legislature and Governor Stephens. This is the way of it:

The new law provides that no real estate broker or salesman may do business and collect commissions for his services in California unless he holds a State license, which must be issued by an appointed commissioner. Each broker and salesman must make application to the commissioner for a license, beginning July 27. The commissioner shall investigate applicant's reputation for business integrity and, if he finds this reputation to be questionable, he may refuse the application. Should charges of dishonest dealing be filed with the commissioner against a broker or salesman holding a license and be substantiated by the commissioner's investigation, the latter may cancel the license and the dealer cannot renew it for two years.

We do not at this moment know whether the law can be made to cover misrepresentation of the quality and capacity of land and imposition thereby or whether it simply rules out bunco dealings and gross forms of swindling. It is, however, encouraging to know that whatever measure of protection for the unwary this new law provides has been long sought by reputable real estate men. It is said that they "have been working for several years to secure legislation of this character which will insure the honesty of the real estate business in this State and protect honorable dealers from the annoyance of irresponsible and dishonest dealers and protect the real estate business from the stigma attaching to the practices of this class of dealers." So far, so good—surely. Much encouragement also comes from the rumor that the execution of this new law may be entrusted to Corporation Commissioner Carnahan, because we are quite sure that he will not be content merely with licensing all people who are not personally impeached, but will look carefully into the character of representations they make and the quality of the landscape which they offer for farming. With this cleansing of the real estate business and with the setting up of a reasonable State policy as a standard for subdividing which private land-handlers must unavoidably emulate, it cannot well be doubted that the outlook for fair and profitable investment in California farming lands is greatly improved. Although it may be possible neither for law nor public policy to part a fool investor from his folly, it is possible that by years of upright dealing we may outlive our present ill-repute as a State which cuts bait for suckers, and gain a good name as a State in which good men are placed on good land with a chance of making good by good work and farming wisdom. And, of course, when California comes this summer, as the law provides, to give the world a voucher for the integrity of her real estate, their business will expand and rise to a new level. To a world steeped in distrust of land dealings ever since

Dido spun her web of thongs around all the corner lots in Carthage, there will be great relief in the assurance that buying real estate in California can no longer be a skin game! And there will be freer investment accordingly.

MEN AND MONEY.

ACCORDING to all accounts current as we write on "Registration Day," the nation is springing forward to declare its contribution of men for patriotic service. More than ten million men in the third decade of their lives are answering the call to enroll themselves for the nation's choosing. There is also a great outpouring of private money for public use in the buying of the bonds which the Government offers as security for the funds it needs. The sale of these bonds is being promoted by all agencies and those who are not called upon to help in the selling should surely help in the buying, either in large or small ways, as their means permit. It is a patriotic service: it manifests one's faith in the cause for which a great peace-loving and peaceable nation goes to war as the only way to demonstrate that faith and to insure it. Therefore, everyone having spare money should buy bonds, as he can afford, patriotically. And it is an inspiring thought, also patriotic in its way of demonstrating confidence in one's country, that investment in bonds requires no sacrifice except, possibly, of immediate indulgence in something which, on the whole, one may be better without. For the buying of our Government bonds is an investment both secure and profitable and therefore fit to be made from a financial point of view. Three and one-half per cent on property which pays no taxes and involves no risk is surely a good investment. A bond is therefore desirable for accumulated funds from which one needs regular returns: it is also desirable to "lay by for a rainy day" because it grows as it lies and is always saleable for what it costs or more. For some or all these reasons everyone who can is buying bonds, doing his share of national duty and getting a good thing. Therefore, we advise all our readers to buy bonds—a big one if you can, a little one if you must. If you don't like bonds on principle and believe in paying as you go, buy one for the baby. He may be mighty glad you did some day!

THE FARMER'S VOICE IS HEARD.

THE VOICE of the producer, concerning the conditions which must be assured to make largely increased production safe and practicable, is now being heard. As we have previously suggested, it was not asked for as it should have been, but it has lifted itself—which is, in a way, all the more creditable and more promising. Last Saturday a large and representative delegation of the organized farmers of the Dakotas, Montana, Minnesota and Wisconsin appeared before President Wilson, the members of Congress and the various executive departments in Washington and declared that they approved the administration's food program and the appointment of Herbert Hoover as food administrator. It should be understood that these five States of the Northwest are, of all the country, the most solidly organized for co-operative production and sale of products. California has greater special fruit distributing organizations of producers than any other State, but California does not take organization as broadly and fundamentally as do these States of the Northwest nor are California's organizations so strictly and independently under agricultural influence in spirit and purpose. We are stating this fact without discussion of details simply to warrant the claim that this Northwest delegation is broadly representative of the country at large, which for lack of such organization lifts not its voice. California's chief productions and conditions are different and therefore less representative of the whole country, although the principles for which the Northwest contends are also important to us, though in less degree, and perhaps less directly. In the matter of the great staples the delegation declared itself, as noted in telegraphic outline, as follows:

The delegation urged the Government to take over all terminal storage facilities, all elevators

and all warehouses and thus destroy food and cotton speculation. They made statement of the actual cost of raising wheat, showing that the farmers have not been receiving high prices for their wheat and that many times they have raised wheat at a loss. They expressed the desire that if the Government takes charge of the food situation it will guarantee producers a certain price, just as manufacturers of munitions are allowed to set prices. If they are to put in extra crops, they said, the cost of doing so would be high, labor would have to be paid almost double wages and the cost of seed and other necessities had also risen. Farming machinery, they said, has risen approximately 125 per cent in the last three years. They urged promotion of agricultural co-operation as a public policy and suggested establishment of co-operative buying organizations. They called attention to the fact that the cost of production is going up and that this should be taken into consideration in price fixing.

Doubtless the delegation made many more points for national consideration which the telegraph did not catch, but those noted are enough to dem-

onstrate that the farmers' interests attach themselves to the most fundamental needs of the country and that, whether one agrees with their views or not, it is important that those who are to really do the nation's work in food production should be urged to state authoritatively the conditions under which they must operate and the surety they need that the results of their efforts shall neither be lost nor rendered vain of intended purpose. Aside from the intrinsic value of full accord between the food producers and the chief executive of the nation in the unique situation in which the country finds itself, it is fortunate for the ease of enforcement of saving policies that such accord exists. With such strong purposes and powers approaching each other from opposite sources it is dangerous to intrude greed and self-interest between. Real national interests, and nation-saving if it comes to that, will be assured if the producers and the President remain in cordial, sympathetic conference.

and is often called "sour sap in the top." The treatment is cutting back to good wood, bearing normal leaves. The preventive is believed to be a thorough whitewashing, with a spray reaching all parts of the top of the tree, after the fall pruning is done. Trees thus treated seem to have escaped injury. There may, however, be "little leaves" from other causes. The matter is not fully understood.

Failure of Vine Scion-Buds.

To the Editor: I have grafted Thompson seedless on Feherzagos vines and I lost 50 per cent of the grafts because the buds rotted, although they attached themselves to the stock. What is the cause of that? Would you advise me to saw the stumps in December and graft them over in March? I think the sap floods the scions too much and gets sour.—A. F. P., Fowler.

It would seem that the scions were not well cared for and the buds rotted before the scions were used. This might be due to burying in soil which held too much water or were otherwise kept too wet. Scion buds are sometimes destroyed by cut worms after grafting. We can only guess at the cause, but believe the buds were injured before grafting. It is not desirable to saw off so long before grafting unless you wish to get the heavy work out of the way. In that case, make a fresh amputation about 24 hours before grafting. This is usually long enough to allow the excess of sap to flow out.

Leaf-Eating Beetles on Feijoa.

To the Editor: What is the name and relative capacity of the enclosed bugs? They seem to be holding a convention on a feijoa bush, and dining on the leaves, which were nearly all gone when I discovered them. They are strangers to me, as I've never seen them bothering anything else. I bagged the whole convention.—W. F. A., Thermal.

We have not the name of the little beast at this moment. They belong clearly to the otiorhynchidae, which is calling them as hard a name as necessary for their first offense known to us. They are relatives of Fuller's rose beetle and of similar form and aspect, but only about one-half as large. They can be jarred from a plant into a kerosene pan or they can be poisoned by spraying the foliage with neutral lead arsenate—three pounds to 50 gallons of water.

Leaf Trouble of Pecan.

To the Editor: I send leaves from a pecan tree that is beginning already to show effects of something that will later in the season dry the leaves all over the tree, and cause the tree to put out many tiny leaves in bunches. It also affects the bark of the tree to shrivel it. I tried to describe the condition to you last winter, but had no leaves to send. You thought at the time it might be dryness, but could it be so early in the season?—C. E. D., Reedley.

The leaves have been carefully examined and show no sign of local parasitic invasion. The foliage fails later in the season because of some condition of soil or air which upsets the normal physiological functioning of the plant. What this is we do not know. It seems analogous to the "little leaf" disease of trees and vines, for which definite cause has not yet been demonstrated and of which there may be several causes, producing ill-health manifestations upon the foliage.

Beans for Fowls.

To the Editor: What food value has blackeye beans for chickens? My chickens like them.—G. O. B., Modesto.

Your fowls must be from Boston, for our observation is that chickens usually wink at beans, unless cracked or otherwise disguised. They are a good, strong feed for growth or eggs, but should be fed with more starchy grains and not used in excess.

California Weather Record

The following rainfall and temperature record is furnished the PACIFIC RURAL PRESS by the United States Department of Agriculture Weather Bureau at San Francisco for the week ending at 5 p. m., June 5, 1917:

QUERIES AND REPLIES

Inquirer Must
Give Full Name
and Address

Gypsum for Beans.

To the Editor: I am going to take off a barley crop from a 20-acre piece in a few days and expect to thoroughly flood and plant to blackeyes. The ground is leased, so I can only figure this year's crop. Will an application of gypsum help the beans? The soil is sandy loam, and gypsum is very generally used locally on alfalfa. If the same is practical for beans, how much, when and how should it be used?—Reader, Winton.

If the land has not had much gypsum recently the effect on beans will probably be just like what local experience shows it to be in the stimulation of alfalfa. The plant will be spurred on to quicker and more vigorous growth—if there is moisture enough present to enable the gypsum to work. Beyond that, of course, there are several questions: Will more growth of the plant mean more beans; if so, will the more beans be worth more than the cost of the gypsum, etc? That depends upon what you get for the beans or pay for the gypsum. If all these work right, you may get a turn on the landlord, for the function of gypsum is not only to furnish lime, but to make other plant food in the soil ready to be taken up by the first crop—which presumably leaves less for the next, etc. Scatter the gypsum at planting or on the plowed land before harrowing. Five hundred pounds per acre will do.

Who Can Choke Foxtail?

To the Editor: For some years I have had my prune ranch plowed late in the spring in order to get the most benefit from the burr clover, and now foxtail and poverty grass have become very thick. What cover crops can I put in to choke these out?—J. J. B., San Jose.

We know of nothing which can get a "strangle-bolt" on foxtail but poverty grass. Some years ago California farmers rejoiced when they found poverty grass (which is a species of *Bromus*) running out foxtail, but they recalled their jubilation when they found that the strong intruder was worse than foxtail because of less feeding value—even when both are young and succulent. You will have to return to earlier plowing so as to catch both plants before they ripen seed and then clean the land by frequent shallow cultivation, as was your former practice. For a cover crop you should sow burr clover or vetch as soon as the ground is deeply moistened in the fall and get all the growth you can up to the time of an earlier spring plowing. It is a mistake, not only for weed seed-growing but for losing moisture, to let the land lie too late for the sake of a little more cover crop.

Capital for Tenant Farmers.

To the Editor: Fully half of the bean acreage in San Joaquin and Stanislaus Counties, as well as two-thirds of the beet crop, is being farmed by tenants. There is absolutely no way these people can secure loans for financing their operations regardless of their ability as farmers unless they tie themselves up by contract for their prospective crop at a price which would be ridiculous if it were not so serious. If the government needs foodstuffs so badly and if landowners themselves

will not or cannot farm their land it seems to me important that some wizard of finance devise some way whereby the man who has to rent land can be properly financed without being subjected to the pawnbroker methods of the buyers.—J. C. L., Ripon.

This is an important matter which the Council of Defense and local bankers are addressing themselves to. In some localities the bankers are acting in securing funds from the Reserve Banks for this purpose upon adequate personal responsibility. Tenant growers needing help should get together and tap the patriotism of the local bankers, for irrigation must come through their ditches. There is no likelihood of a direct shower of funds from above.

Do Not Over-Irrigate Potatoes.

To the Editor: My potato vines are tall, vigorous and in full bloom—many potatoes almost full grown. We have been using them for three weeks. I am advised to irrigate them again. I insist on no more irrigating. They have been wet three times already and some are taking second growth. Please tell me what's what.—J. C. M., O'Neals.

Stop irrigating until you get them in the kettle. They have already had more water than is necessary or desirable.

A Bad Case of Cutworms.

To the Editor: We are having our first experience at gardening, and the land we are using is new, and badly infested with cut worms. There are millions of them, and we are having the time of our lives fighting them. We spray, use poisoned bran, dig them out of their holes and crush them, and resort to every remedy. The first time we used the Paris green spray, it seemed to have killed the foliage of the young plants. Is this usual, or do we apply the spray too often?—H. J., Big Bar.

You might send to the National Council of Defense for the latest model of submarine-chaser. Otherwise, you are surely up against it for a little while longer. The worms will, however, soon submerge and go into summer quarters in earthen cocoons, and you can get a lot of them by plowing up the ground deeply and letting dry heat get at them until the early rains. In spraying, you should have used lead arsenate instead of Paris green, which contained more free arsenic than your plants could endure.

Sour Sap in the Top.

To the Editor: I have about 100 plum trees of different kinds and the leaves on most of the trees are small and turn yellow, on some of the trees. Part of the limbs will appear all right—large leaves and some fruit—and the rest will have small leaves. The disease gets worse each succeeding year. What can be done for it? Will spraying in early spring help them?—I. O. K., Fresno.

This is apparently a phase of the trouble discussed by Prof. R. E. Smith on the first page of our issue of April 21, with special reference to apricots. It is not a disease, but is apparently the effect of low temperature after the sap has risen

Boys Helped Fruit Harvests

[Written for Pacific Rural Press by Supt. J. L. Montgomery, Preston School of Industry, Ione.]

"The boys have been very satisfactory help, and I don't know how we could manage to get all the berries on this place picked without them. We want them to pick for us if there is any chance; for they have been the best help we ever had on the place."—H. H. Kelley, Sebastopol.

"H. H. Kelley has told me that you can bring the boys to the berry fields again this summer. This is good news to us and we will hope to make it a profitable season for the boys."—W. M. Hotte, manager Gold Ridge Orchards Co., Sebastopol.

The extracts quoted above from letters to the Preston School of Industry testify to the desirability of using boys in fruit harvests.

For two seasons, one of ten weeks and one of thirteen weeks, we sent fifty boys from Preston to the ranch of the Gold Ridge Orchards Company at Sebastopol, Sonoma county, to harvest their berries, Logans and Lawtons. In the season of 1914 our boys made a gross earning of \$1500. The best picker earned \$59, and the average was between \$20 and \$25. In 1915 we sent fifty-five boys for thirteen weeks, and the gross earnings were \$1675. We harvested the crop from twenty acres of Loganberries and sixty-five acres of Lawtons. The gross tonnage was about one hundred tons. Most of the berries were picked for the canneries.

CAMP MANAGEMENT.

They established Camp Preston in a grove of trees belonging to the Gold Ridge Orchards Company. The supplies were furnished from the commissary of the institution, some of them being sent by freight. Bread, for example, was sent by parcels post daily, baked by the boys at the institution. The only expense the boys were put to was that of transportation to and from the fields. The gross earnings of the boy, with his transportation deducted, were

placed to his credit as a "nest egg."

A majority of these boys have placed their earnings in a local bank, drawing interest. Others sent money home to their parents, who were in need. Some of our boys have accumulated over \$100 in a savings account.

Our camp was located about five miles from the camp of the Boys' and Girls' Aid Society. The captain of Company E, Wesley Sibole, and wife, were in charge of our camp, the boys doing their own cooking and taking care of the general camp duties. The work in the fields was supervised by some of the boys who, by virtue of their military positions, were placed in command of small groups.

The trip to and from the institution, which is located at Ione, Amador county, was by motor truck to Stockton, and a specially chartered steamer from Stockton to Petaluma, and via electric car to Sebastopol. The berry season meant money to the boys, and much hard work; but at the same time they had a part of each day set aside for recreation, and on numerous occasions were taken on trips to the beach. The camp had a swimming pool and a baseball diamond, and was well equipped, sanitary and well ordered.

SAN JOAQUIN GRAPE HARVEST.

Last year, 1916, a shortage of labor developed in our own vicinity, and this same group of boys was sent into San Joaquin county to harvest grapes. From time to time our boys have been sent out to assist various farm communities when they were unable to secure help to harvest their crops. The boys were thankful to the Gold Ridge Orchards people for the manner in which their camp was arranged and the various outings that were given them during their stay.

SUMMER-PRUNE BLACKBERRIES FOR FRUIT.

Before Lawton blackberry stalks of this season's growth are six feet tall late in June, it is absolutely necessary in the Sebastopol district of Sonoma county to top the vines, according to Manager F. B. Bill of the Sebastopol Berry Growers, Inc. Pruning shears or sheep shears are generally used. This forces out laterals, which are allowed to grow 18 to 30 inches long in a normal season; though many were tipped at 12 to 18 inches last year, which was especially dry. In the following season, these laterals send out fruit shoots which bear fruit at their tips and in their leaf axils. Barren shoots get ahead of the others early in the game and might well be pulled off.

LET TRAGEDIES RIPEN ON TREE.

Let Tragedies get pretty blue all over, so they are sweet and eatable before picking, says C. S. Hixson of Butte county, whose Tragedies generally top the market. If picked too soon, they shrivel and lack flavor and tenderness. They stand shipment well, even when ripe. In picking and packing, handle as little as possible, in order to leave the bloom on.

Have You Enlisted

in the fight to overcome the great world food shortage?

Do you want to "Do Your Bit" by making every acre of your land produce its utmost? If so you must feed your soil, i. e., increase the available supply of the elements required by your crops.

More Crops

In these days of war and strife, the things we hear most about are more crops, and more abundant crops. Some eminent personage has said, "Whether for peace needs or for war necessities, the use of fertilizer is the basis of crop production." The truth of this saying no one knows better than the man who uses Hauser's Organic Fertilizers. He gets more crops, more abundant crops and better crops.

Don't delay, communicate with Hauser Packing Company about your fertilizer needs, use fertilizer and get results.

Atomic Sulphur for Grape Mildew.

After using atomic sulphur early in the season for three years on grapes for mildew, E. E. Morse of San Joaquin county is enthusiastic about it. He had just finished spraying 120 acres on May 25. It remains effective four or five weeks early in the season, according to the Morses, being ready to vaporize at the same temperature at which mildew spores germinate, which is about 85 degrees F. Last summer Harry Fee of the same county sprayed with atomic sulphur about June 1, and its smell could be noticed when the Tokays were packed.

Dry sulphur is generally used after the first spraying with atomic, due to the lower cost of the former and to the fact that that it would be hard to get a big spray rig among the vines then.

Plum Thinning.

The time to thin plums is when they stop their first growth to harden the pits. They stand still for a while, then start to grow again, says C. J. Uhl of Vaca Valley. He started about May 8 last season. H. A. Bassford says not to thin plums till after frost is over, which is generally about April 20. Leave small plums about an inch apart and large varieties two to two and a half inches apart. Pick off ill-shaped ones. It often happens that plums intended to be left wilt a few days after thinning, due to their stems having been partially loosened in pulling off the rest. Such a plum very likely does not mature.

Soap Suds for Curl Leaf.

To the Editor—I wish to say that I have checked and even killed curly leaf on peaches in full leaf by spraying with soap suds. At first I just threw my wash suds on the trees. Now I use a small sprayer and add atomic sulphur to the mixture. It takes several applications to kill it. I use two tablespoons of lye to one boiler of water, heat nearly to boiling point, and skim off the scum that will rise to the top, as our water is hard. Then add one bar of soap. I use it cold after taking it from my washing machine. Of course one could use it clean, but I make it answer two purposes.

Mrs. A. M. S.

San Juan Bautista.

Successful Walnut Budding.

Last season R. Burton of Vacaville found why he had failed with walnut budding in previous years. He had been in the habit of cutting buds without preparing them. Last season he cut off the leaf at the bud to be used, two or three weeks before cutting the bud. This permitted the leaf stem to dry up so no air could get through the cut end, and the bud could not dry out through the leaf stem. It made the buds plumper, too; and two-thirds grew of those he budded last September.

Humboldt Strawberries.

Where does this man profit? T. H. James of Humboldt county paid \$4.50 per 1000 for nine-ounce strawberry baskets last year and expects to pay \$6 this year. He pays \$10 per 1000 for picking the berries. Freight at 30c per 100 pounds costs about \$3.19 per 1000 baskets (including chests). These costs will total this year \$19.19 per 1000 baskets or 1.9 cents per basket. Add to this the rent, commissions for selling and cost of production. Then see if he shouldn't get 6 cents.

Makes Borders With Disk.

Borders made for orchard irrigation by plowing them in the upland red ground owned by Frank Watson of Butte county wouldn't hold water. Now he makes fine, tight, clodless borders by running the disk along the center between rows three times.

Weed Cutter for Lawtons.

Don't neglect a last cultivation of Lawton blackberries this month, preferably with a weed cutter, to loosen any caking of the soil and to cut the sprouts, which will bother the pickers in slightly cultivated ranches.

Save those dollars

Reduce the cost of clearing land.

If you have been using ordinary dynamites for blasting stumps, try either of the Giant Farm Powders—Eureka Stumping if the soil is dry or Giant Stumping if it is wet. These improved explosives go further and get the stumps out cleaner. They will save you dollars on every acre, because they are made especially to meet Western conditions.

Blast Stumps With

GIANT FARM POWDERS
STUMPING—AGRICULTURAL

"They save work and money and give results when all other means of removing stumps have failed," writes Robert Chabot, Moclips, Wash.

"Better than any other," says A. E. Adkins, Woodburn, Ore.

"Most satisfactory," says John Zurr, Santa Rosa, Cal.

It was the product of this company that originated the common name "giant powder." Other explosives are sometimes represented to be Giant Powders. If you want to save dollars on your stump blasting, insist upon having the genuine.

cut citrus crop losses by summer spraying

PROTECT YOUR PROFITS WITH TRIUMPH AND BORDEAUX

Don't wait until fall to use an insecticide on your trees. By then the insects will have done irreparable damage.

Reduce insect injury to the minimum by spraying your grove this summer before the larvae mature with our TRIUMPH and Bordeaux combination spray—Scientifically Right, Grove Tested, Commercially Satisfactory. It is not a "shotgun" mixture.

The TRIUMPH and Bordeaux Combination is a Fungicide as well as an Insecticide. It controls insect pests and fungus diseases at the same time at the cost of one spraying. It is safer as regards spotting of fruit and tree injury than is a straight insecticide.

The supply and price of Triumph and Bordeaux are certain. Stocks are on hand in Los Angeles and San Francisco. Quotations upon request.

Clip and mail the coupon for our new free book, "Spraying of Citrus Trees." It is crammed with new, accurate information, formulas and quantity tables.

Beating the Average White Bean Yield

[Written for Pacific Rural Press.]

Two reasons stand out why Rustin Kramer gets better average yields of Lady Washington beans than his neighbors of Sutter Basin in the Sacramento Valley. One is the persistent cultivations by which the ground is worked fine and vegetation kept down from the time when winter floods recede (any time from February to May) until planting time, about June 1. The other is the separate corner for seed in which he plants eight or ten sacks from another district about every four or five years; and the careful recleaning the seed gets every year before planting. These preparations assure a good stand, moisture retained for the beans and not stolen by weeds, and much less trouble is weeding. Mr. Kramer has been growing beans for twenty years; and he has grown only the large whites, because he does not want volunteer colored beans to reduce his grade or to mix his seed.

Many people plant whites early in May; but Mr. Kramer waits at least until June 1. Then they are not in bloom until late August. Those planted earlier are abloom in July and early August, when hot winds are likely to blast the blossoms. Then a second growth comes and continues too late, setting beans which do not ripen.

EXTRA FINE CULTIVATION.

So soon as the water recedes from the field and it begins to get foul with weeds, Mr. Kramer has it plowed, generally four or five inches deep, but once a foot deep. The flood leaves one-fourth to one-half inch of silt over the land every year, so it is never artificially fertilized; and irrigation is not practiced, the land being bordered on two sides by the Sacramento river levee.

After plowing, the field is harrowed and rolled; lies idle two weeks for more weeds to sprout, and is then harrowed and rolled. Two

weeks later it is double-disked deep, harrowed and rolled. This spring, on May 18, he was just finishing a clod-mashing which followed disk-ing and harrowing. Another plowing was to come about June 1, and the beans were to be planted the day after plowing.

PLANTING BEANS.

Planting beans too thick makes them grow tall and spindling and prevents the lateral growth which bears the pods. A spindly vine may have a dozen pods, while a well-branched vine will be loaded.

Thirty to thirty-five pounds of Lady Washingtons are enough per acre, planted two or three inches apart in rows thirty-two inches apart. Special plates for beans could be put into a corn planter satisfactorily, but Mr. Kramer has a regular bean planter. To test out the speed of seeding, the best way is to run the planter on hard ground a few rods. Beans do not break in the planter, regardless of speed, if the holes in the plates are big enough to admit an entire bean.

CULTIVATION AND HARVESTING.

Cultivation with a two-horse shovel cultivator about three weeks after planting is followed by a crow-foot weeder, which leaves the ground level and clean. When vines begin to shoot runners, hand weeding and hoeing commence. Half of the weeds must be pulled, being close to the vines; but this is not much of a job, because of the long, frequent cultivation before planting.

Harvesting commences about the middle or last of September, according to the weather. Last year it was September 20 when the last pods were "beginning to dry pretty yellow." Harvesting too green takes longer for them to cure in the winnow and the beans are not plump, but flat and unmaturing. A bean thresher is used after the beans have cured.

What Is the Matter with the Farmer?

[Written for Pacific Rural Press by C. Carr Baum, Edendale, Cal.]

To the Editor: Just a few words in answer to Mr. Chas. Blom's article in the Press of May 26th, entitled, "What Is the Matter With the Farmer?" Many have spent a lifetime trying to answer this question, but I think the answer is to be had by those who will consider some of the things that are helping to educate the farmer.

We have ably published farm papers by men who really have the best interests of agriculture at heart. The telephone, the automobile, better roads, farm schools, government and state bulletins on important subjects, and last but not least the different farmers' organizations.

All of these agencies are helping to solve the question asked by Mr. Blom. It is necessary in all great movements to start at the bottom and work up, and the farmer was on the very bottom rung of the ladder. Thanks to the agencies at work, he is climbing faster every year and the day of an organization to embrace all farmers is fast approaching. It is necessary for every farmer to realize for himself that he cannot stand aloof from his fellow worker. In union there is strength.

Personally, I belong to the Farmers Union, California Peach Growers, Inc, the California Prune and Apricot Growers Association, and a National Farm Loan Association. If my farming required any other joining on my part, I would be ready and willing to help with my time and money.

Let every man who has the bet-

terment of farmers and farm conditions at heart put his shoulder to the wheel, and when enough push hard enough the big wheel of a

united farmers' association will turn, and around this wheel all those who till the soil will move as one man with one purpose.

Mr. Ranch Owner! Mr. Truck Gardener! Mr. Farmer!

Are you awake to the opportunities that lie all around you?
Do you realize that today, now, is the best time to grasp your opportunities?
Have you studied your ground to the best of your ability?

Are you losing valuable space, spending valuable time planting crops, only to see them dry up, burn up before your very eyes for lack of "rain"?
Why not be your own "rain-maker"? It is easy. "How," you ask. "IRRI-GATE." Whether you own hundreds of acres, one acre, or even less, you can have water as you need it, a thorough soaking or a few drops, by simply turning a valve and letting your pipe carry the water just where you want it. This is not an expensive process, not nearly as expensive as it is to spend hours of back-breaking toil only to see your crops wither and die for lack of water.

Do not experiment with "Irrigation Pipe," as so many have, but write or go to a firm that has made the subject of "Irrigation" a thorough study; who have spent thousands of dollars in devising a perfect pipe for the purpose. Let their thoroughly competent corps of special pipe engineers tell you what you require and what not to install. They will tell you the truth, for the reputation of their company is back of them and they cannot, dare not misrepresent their product. They have been in business over a quarter of a century and cannot betray the confidence of their customers.

Canadian Farmers Profit From Wheat

The war's devastation of European crops has caused an unusual demand for grain from the American Continent. The people of the world must be fed and wheat at over \$2 per bu. offers great profits to the farmer. Canada's invitation is therefore especially attractive. She wants settlers to make money and happy, prosperous homes for themselves by helping her raise immense wheat crops.

You can get a Homestead of 160 acres FREE and other lands at remarkably low prices. During many years Canadian wheat fields have averaged 20 bushels to the acre—many yields as high as 45 bushels to acre. Wonderful crops also of Oats, Barley and Flax.

Mixed Farming as profitable an industry as grain raising. The excellent grasses full of nutrition are the only food required for beef or dairy purposes. Good schools, churches, markets convenient, climate excellent.

There is now an extra demand for farm laborers to replace the many young men who have volunteered for service in war. The government is urging farmers to put extra acreage into grain. Write for literature and particulars as to reduced railway rates to Supt. of Immigration, Ottawa, Canada, or

GILBERT ROCHE, Canadian Government Agent
Canadian Gov't Exhibit, San Diego, Calif.

Field and Garden Suggestions

[Written for Pacific Rural Press.]

Who Will Help Get This Grain?

To the Editor: In the heavy rain of last week much grain lodged badly in this section. Barley is in the soft dough stage and heads quite heavy on the stem so it is hardly likely that it will raise much. In my own field, in places where quite rank, as much as an acre or two went down almost solid; other places only in spots. How can I handle this so as to cut without losing much grain? Do not believe a binder can raise it more than enough to clip off heads, too short for binding. I lost much last year in same way.—W. H. W., Turlock, Cal.

[The heads will rise somewhat and we should expect to get more of them with a header than with any other outfit. If we had no header we would feed it off with sheep or hogs. Can any reader make a better suggestion?—Editors.]

Careful Summer Fallow.

Now or sooner is the time to be working for next year's grain crop.

Good summer fallow was responsible for one of the best little pieces of barley noted on a Sacramento Valley trip last spring. It was four acres, worked by Ed Norton of Glenn county. Ground was plowed a good six inches deep late in the spring, harrowed right away, and a

clod crusher run over it. Then it was spike-toothed twice, and no weeds grew on it all summer.

Clean seed was recleaned by Mr. Norton, so it weighed 110 pounds per sack. A hundred pounds of this was broad-casted per acre about December 15, and spike-toothed twice. It made a beautiful, heavy, uniform stand three feet tall when seen in early May. The heads were about three inches long. No irrigation or fertilization was given, though it had been hog pasture the season before following.

Harvesting Onions.

The Italian Red onions planted last September and transplanted about New Year's by J. A. Harvey of Butte county are ready to harvest June 15 to July 1. In the growing season the tops would break if bent sharply at the collar, but about harvest time they get "floppy around the collar like a rag." Then the tops are bent down, and when they are pretty dry the onions are pulled by hand, cultivation having kept the ground soft. They are left in fifty to sixty pound piles to cure until the tops are perfectly dry. If the sun is very hot, protect the onions in the piles by keeping the tops over them.

Did They Interpollinate?

For two years in succession W. Hanson of Nordhoff has tried to get a stand of white beans on his hillside land, but with little success till season before last, when he grew a few pink beans for his own use. In places where the pink beans had grown near the white ones they both did well, but where the whites stood alone only half a crop was gathered. This set Mr. Hanson to thinking, so he did it this way: Two rows of whites, then two rows of pinks, and last season he not only tested out a good experiment, but had a bumper crop of both whites and pinks.

Ants on Egg Plant.

To the Editor: I wish to say in reply to W. S. C. of Lindsay, in regard to ants eating egg plants, that I have had the same trouble, and saved my plants by sprinkling with Buhach. Be sure to get plenty of the dust near the roots and on the blossoms. Get Buhach at drug store. It will have to be applied after each irrigation or oftener, as ants appear.

MRS. C. E. BURNETT, Tulare.

Honey Sections Held Tightly.

To hold the honey sections firm in the supers, J. Risse of Tehama county has a thin board beside them which is held tightly against the sections by springs. Pull against the springs with one hand when taking out the sections with the other.

The farmers of the country should subscribe liberally to the Liberty Loan Bonds. They get the safest investment in the world and their money supplies their best customer the funds to purchase their products. This is political economy the wisdom of which is plain to everyone.

Shingles that last as long as the house

California Redwood shingles defy the attacks of sun, rain and changes of temperature. They resist wet and dry rot, and when properly laid make a permanently tight roof.

Since Redwood contains a *natural preservative*, Redwood shingles in their natural state will last a lifetime. If stained or painted occasionally, they will last as long as the house.

And since Redwood contains no pitch, it is hard to ignite, burns very slowly and is easily extinguished.

California Redwood

Resists rot and fire

LAYNE & BOWLER PUMPS giving good satisfaction

Janess Investment Company

REAL ESTATE SUBDIVIDERS
HOME 10346 BROADWAY 2222

Los Angeles March 8th., 1916.

Layne & Bowler Corporation,

900-910 Santa Fe Avenue.

City

Gentlemen:-

We have in use three of your Layne - Bowler pumps. They have given us good satisfaction in all of our Water Companies where used. One of these has been in since 1912.

You are at liberty to show any of our plants in operation to any of your prospective purchasers.

Yours truly,

JANESS INVESTMENT COMPANY

By *Janess*
Secretary.

Mechanical Power on the Farm

Users of tractors, engines, pumping plants, motor trucks, automobiles, electric motors, and other mechanical farm power are invited to make this department an exchange of their experiences and troubles.

WATER MEASUREMENT FOR IRRIGATION.

A subscriber has asked the Pacific Rural Press for information as to the size, pressure required and other detail for standard irrigation boxes for measuring water.

The illustration printed herewith shows how such a box should be

stream side. There are a large number of forms of weirs. The Cipoletti Weir, in general use, has a thin horizontal crest, the sides of the weir notch, sloping back from the vertical at an angle equal to one inch in horizontal for every four inches in vertical. For each additional inch in depth, the weir notch widens on each side one-

Weir Box in Operation.

made and how it is placed. The operator, with an ordinary rule, measures the depth of water flowing through the weir notch.

The term "weir" is properly used only for structures designed to allow the water to flow over the crest with a considerable fall on the down

fourth of an inch, or a total addition of width of one-half inch.

When the weir box is placed, care should be taken to have the bottom of the notch or crest level. An ordinary carpenter's spirit level may be used for this purpose. When the crest is horizontal, one end of the spirit level is placed on the center of the crest; and when level, the other end will mark the point for the zero of the weir gauge. In rough work, a nail may be driven part way into the side of the box, the top of the nail being level with the crest of the weir. A thin plate of brass is to be preferred to a nail. In other cases gauges are inserted on the sides of the flumes and properly marked in tenths of feet or inches. At other times a post one to two inches square is placed in the center of the box and several feet upstream from the weir board. The top of this post is level with the crest. To measure the flow, find its depth above the post or on the gauge and refer to the table in Wickson's California Fruits to get the cubic feet per second or gallons per minute.

One miner's inch equals 0.1496 gallons per second, 8.976 gallons per minute, 538.56 gallons per hour, 12,925.44 gallons per day; 0.02 cubic foot per second, 1.2 cubic feet per minute, 72 cubic feet per hour. One acre-inch of water (that is, one inch in depth over an acre of surface) equals 27,152 gallons or 3,630

KILLEFER
QUALITY

HEAVY DUTY CULTIVATOR No. 3

KILLEFER
EFFICIENCY

This latest model of Tractor Cultivator was built to meet the demand of owners of the smaller size Orchard Tractors.

Built on the lines of our well-known and popular Monarch Cultivator with levers and rear wheel eliminated, but provided with hand wheel screw lift, making it a perfect one man cultivator.

The material used in this cultivator is of the same high grade as used in the make of all of the Killefer implements.

Cushman Farm Engines Used on Binders Will Save You Money

Binders require less horse-team, work easier, cutting greater acreage. Will save grain on the corners. Get down or lodged grain. Heavy crops have no terrors for a Cushman.

It is An All-Purpose Engine Will fit any grain, rice or corn binder.

IT WILL DO MORE KINDS OF WORK THAN ANY FARM ENGINE MADE BUILT LIGHT—BUILT RIGHT—GUARANTEED

Has wide range of speed—300 to 950 R. P. M.—and will operate wood saw, pumps, washing machines, cream separators, ensilage cutters, sprayers, threshers, battery rollers, grain grinders electric generators, hoists, power blacksmiths' tools, concrete mixers, etc., to best capacity. Will furnish power to mowers, reapers, manure spreaders, etc.

BUY A CUSHMAN THAT YOU CAN WORK EVERY DAY A 4 H. P. will drive 3-inch centrifugal, an 8 H. P. will drive 5-inch centrifugal with 20-foot head on 6½ gallons of distillate in 10 hours. See your dealer or write for information to

cubic feet, and one miner's inch will supply this quantity in about 50.4 hours. Thus a simple calculation shows that a little stream of five miner's inches will supply enough water to cover an acre 2.3 inches deep in about 23 hours—a fair amount for one irrigation of soil of average character if it has not been allowed to become too dry before the application. In fact this is an average amount actually used for an irrigation of shallow-rooted plants like most field and garden crops.

HORSEPOWER PLUNGER PUMP.

[Written for Pacific Rural Press.]

A horsepower attachment for a common plunger pump may be seen on a little ranch in Butte county. A 20-foot sawhorse was made of a 4x12 timber set flatwise on four legs 4x4 inches by seven feet long. It was simply set on the ground with the end to the pump. The legs were well braced. From the ground vertically through the center of the 4x12 timber is a two-inch iron rod. On it about 2½ feet from the ground is clamped a 10-foot sweep for a horse to pull, and a shorter 2x4 to lead the horse.

On the top end of the rod and above the timber, is a horizontal wheel 32 inches across and cogged to fit a pinion on a horizontal 1¼-inch rod which runs along the timber and projects over the pump. To hold the cogs in mesh, a little wheel is held by a bent and twisted strapiron to roll on the rim of the big wheel over the pinion as the big wheel is turned.

With the horizontal rod for its axis, a 30-inch wheel hangs over the pump. A bar with several holes in it is fastened to the wheel, so a bolt through one of the holes turns with the wheel in a circle of the right size to make the stroke of the plunger. A rod from this bolt to the plunger operates the latter.

BEETS NEED FREQUENT IRRIGATION.

[Written for Pacific Rural Press.]

The difference between a poor crop of small stock-beets and a good big one on the same land next year in an irrigated district, was made by use of a 7½-h. p. motor and a 3½-inch pump in the house-well, for E. Q. McClure, then of Stanislaus county. Ditch water came every five weeks, so that in 1915 the beets wilted down twice between irrigations. In 1916, by irrigating from the pump, a good crop of stock feed was obtained from the same piece.

LAY THE DUST AROUND PACKING HOUSE.

[Written for Pacific Rural Press.]

In dusty weather it is hard to pack cherries, plums, and other fruit clean so it will open attractive at the East. To avoid dusty fruit, H. A. Bassford of Solano county sprinkles water around the packing house on his ranch. A 5,000-gallon tank on a tower beside the packing house furnishes the pressure. It is filled by a 2-h. p. gas engine operating a common plunger pump.

When buying a tractor, see that it is strong, simple and light, that the motor is well enclosed, the tractor adapted to belt work, will turn in small space, is economical and the company in business to stay.

TEST SPECIAL BELTING

A money-back-belt — no arguments — no quibbling

a belt once a year, often, when you can get a **TEST SPECIAL**?—It will save you time, annoyance of costly shut-downs, and increase the amount of power transmitted because there is no slippage.

A GOOD belt will last for many years—**TEST SPECIAL** surely will—money back if it doesn't.

No other belt has ever approached **TEST SPECIAL** in point of service—no other belt likely ever will—the reason—it is honestly made—most belts are "near belts."

Write to us about your belt troubles—make a rough diagram or drawing of your belt as now installed, if you can do so, otherwise, tell the story as fully as possible.

We'll promptly reply and tell you how to get the best results. You don't have to buy a **TEST SPECIAL** in order to get our help—you'll be sure to buy one some time, when you know how much money it will save you.

General Agricultural Review

Field Notes.

California's crop of Irish potatoes will nearly treble last year's yield.

This year more than 60,000 acres in San Joaquin county are said to be devoted to beans.

Cold weather in April and May hurt the cotton crop severely through the entire South.

California's alfalfa crop this season is estimated at 6,125,000 tons, valued at \$61,250,000.

Oats and barley around the Pomona section look good. None is cut for grain, all going to hay.

Acreage under cantaloupe cultivation in the Imperial Valley exceeds that of last year by over 5,000 acres.

The harvest of the 1917 American wheat crop began in Texas May 22, three days earlier than normal.

It is estimated by Farm Adviser Hulemann that the potato acreage in Glenn county is five times that of previous years.

State Horticultural Commissioner G. H. Hecke says the recent cool snap will increase California's cereal crop by about 20 per cent.

Out of the 12,000 acres planted to rice in Yuba county this year, 9,000 acres have been put in by the Fleishhacker interests of San Francisco.

Wheat is said to be a light crop in the Livermore Valley and elsewhere in that vicinity. Barley, on the other hand, is a good crop in that section.

Despite forebodings of a short grain crop because of lack of rain this winter, indications now are for one of the biggest grain crops in the history of the Oakdale section.

There will be 1,000,000 cases of asparagus from the lower reaches of the Sacramento Valley ready for the market when the present season closes, or 250,000 cases more than last year, it is reported.

J. H. Belger of San Leandro says tomatoes and other vegetable crops give promise of being good yields in and around San Leandro. There is a sufficient quantity of moisture in the ground to insure satisfactory growth.

Five thousand acres of the rice crop of Glenn county have signed up at a meeting of the rice growers in Willows, and nearly every grower in the county signified that he was willing to join the Pacific Rice Growers' Association.

The potato crop of Riverside county will be at least 300 per cent above normal this year, according to a report issued by the committee on food supplies and resources of the State Council of Defense at the University of California.

Farmers in the various agricultural districts of Alaska will have as much ground under cultivation as possible this year. Intensive farming is possible in Alaska, owing to the long days and the rapid growth of root vegetables and berries.

A letter from a correspondent near Modesto states that alfalfa is being cut the second time, and grain-hay harvesting is nearly completed. Prices on first cutting of alfalfa in the field range from \$8 to \$10. Buyers are trying to contract tomatoes at \$10 f.o.b. Ripon. Some peaches have been contracted at \$25 for freestones and \$45 for clings.

Deciduous Fruits.

The Hanford Cannery contemplates a record pack.

This year the cherry season is 17 days later than last at Newcastle.

Shippers in the Watsonville district are sending in raspberries and loganberries.

Practically all of the apricot crop in the Banning-Beaumont district has been contracted at \$50 a ton, and some buyers are now offering \$60.

The outlook for apples in the Pajaro Valley is fine and the dryers contemplate handling immense quantities of fruit that may be held for lack of shipping facilities.

Veteran commission men of San Francisco declare that there will be no shortage in any of the staple vegetables and fruits this year, except possibly in apricots and cherries.

Santa Clara county will have the greatest prune year ever known in her history according to J. W. Chilton, local packer, who predicts that the crop will be 112,000,000 pounds.

A branch from one bud inserted on a Royal apricot tree by R. Burton of Vacaville, has a dozen different kinds of leaves and three or four kinds of fruit, some fuzzy and some smooth.

The Alameda County Retail Grocers' Association and the Central California Berry Growers' Organization have decided that there shall be no rise in prices of berries on Saturday mornings, as heretofore.

Contra Costa county will have a full normal crop of prunes. Sonoma county will produce above 60 per cent of a normal crop. Frost damage there is being overcome by larger sizes and new acreage. Napa county will yield a full crop, according to Henry Wheatley, one of the large orchardists.

The outlook for a normal crop of all fruits never was better in San Bernardino county than at the present time. Peaches and apricots are being thinned to make room on the trees for the fruit to grow. So far it looks like a 100 per cent crop for apples, pears, grapes, olives, oranges, lemons and grapefruit, says John P. Cay, Horticultural Commissioner of San Bernardino county.

Citrus and Semi-Tropical.

Initial shipments of new-crop figs received in the San Francisco wholesale market from Indio, Cal., sold at 40 cents a pound.

A large olive packing plant will be built in Lindsay this summer. Besides the processing of olives the plant will be equipped to turn out oil.

The Glendora Citrus Association closed the season last week for Washington navels with the shipments of 822 cars, or 328,538 packed boxes, bringing growers about \$445,000.

Professor L. B. Scott, pomologist in charge of the subtropical fruit investigations of the Department of Agriculture, says that there are 140 varieties of avocado grown in Orange county.

The Glendora Heights Orange and Lemon Association finished its season for navels last week, handling 250 cars, or approximately 100,000 packed boxes, worth to growers about \$140,000.

The fig growers of Fresno county who organized recently have sold their holdings of 230 tons of the 1917 crop to local packers. The Calimyrnas brought 11½ cents, and the Adriatics 7½ cents a pound.

Firms who purchase citrus by-products are requested to list their names and needs with the Bureau of Chemistry of the United States Department of Agriculture, located at 142 South Anderson St., Los Angeles.

The Ashley fruit standardization act, drawn as a result of conferences of fruit growers and bringing citrus fruits under standardization regulation, has become a law. It provides that oranges must be substantially colored upon the trees or must pass the eight-to-one test.

The San Antonio Fruit Exchange of Pomona reached high mark for the shipping season last week when it sold 222 cars of navels in the Eastern markets in four days for \$187,000, an average of \$850 per car. The orange growers in the ex-

SECURITY ORCHARD LADDERS

(of course the first cost is more)

No mortises at step-joints. Stile machine-

wrapped with steel at every step.

Extra strength where needed without excessive weight.

Half of California's Citrus Crop is picked from these straight-grained Douglas fir ladders.

The great Northwest sends down for hundreds of SECURITY LADDERS each season for apple and pear growers' use.

Here is a ladder so rigid that even a "green hand" will not hesitate to reach out and up for fruit. No picker will have to waste time moving this ladder so much, because "SECURITY LADDERS" are safe under all conditions.

The steel brackets that hold the steps (flat) make step-changing quick and easy. The ladder loses none of its stability.

SECURITY LADDERS will soon save their entire cost in your orchard.

Some of the California dealers listed below have sold SECURITY LADDERS for 10 years—many of them for 5 years—and all of them continue to pay the higher first-cost because SECURITY construction has been thoroughly approved by fruit-growers.

change, which is composed of seven associations in Pomona, Lordsburg, Claremont and Walnut, have received \$2,356,502 already this season, and it is expected that at least \$1,000,000 more will be received from the sale of late navels and Valencia's.

Record Fruit Crop in California.

Reports received by State Commissioner George H. Hecke from the horticultural commissioners of the forty-five producing counties of California, showing fruit conditions on June 1st, promise the largest crop setting on the trees in years. A shortage is noted in some localities in a few varieties, while other sections show above the average, and the new acreage coming into bearing should offset the losses. The weather for the month of May, while cooler than usual, has benefited the grain crop and has not proved injurious to the fruit crop, except in one county.

A few comparative figures, as follows, indicate a big increase this year: Almonds are tied with last year's report, indicating 59 per cent for June 1. Apricots showed 40 per cent last year and 65 per cent this year. Peaches 68 per cent in 1916 and 86 per cent in 1917. Pears 63 per cent in 1916, 89 per cent in 1917. Prunes 52 per cent last year and 77 per cent this year. Other fruits of the State show about the same ratio.

No Los Angeles Fair.

The Los Angeles District Fair, preparation for which has been going on for the past three weeks, and the willingness of breeders to cooperate to their fullest extent, has been declared off for this year by the board of directors. With so much war preparations going on and the attracting of the masses from the more peaceful pursuits to war's alarms, it was feared would be sufficient to interfere with the fair's success. Then, too, the ground to be used, it was feared, would be needed for military purposes. Hence the decision to abandon the fair for this fall.

Grasshopper Poison.

On open land, where grasshoppers are abundant and waiting for their wings to migrate to planted areas, they may be poisoned. T. D. Urbahn of the U. S. Dept. of Agriculture recommends the following poison: Mix a pound of Paris green thoroughly with four gallons of water and two quarts of cheap blackstrap molasses. Add half a dozen lemons ground fine in a meat grinder. Slowly pour this mixture over 25 pounds of bran and stir thoroughly to a uniform mixture. White arsenic is about as good as Paris green. Oranges or a little salt may replace the lemons. Alfalfa meal or rice meal may replace the bran. Broadcast this on hill land by hand or with an end-gate grain-seeder. Spread finely, for all lumps are wasted and a menace to stock. The above amount is enough for five acres.

Grasshoppers feed ravenously late in the afternoon. The poison is most effective if spread early in the afternoon. If alfalfa, mow alternate checks to concentrate the grasshoppers, then poison them.

Always be careful not to poison livestock and poultry.

Big Fruit Shipments.

Authorities in fruit shipping estimate that, if the grape prospects hold up, the total deciduous fruit to be sent out of the State this year will approximate 20,000 cars, as against 18,000 cars last year, which was the record breaker at that time. The season is about two weeks late; the Eastern market has toned up wonderfully, so that good prices are anticipated.

Good Barley Crop.

Prospects for barley have gained steadily during the past month owing to the cool weather. Harvesting in the central part of the State will commence next week. The crop is estimated to yield from 400,000 to 500,000 tons, as compared with 450,000 tons last year.

More than \$1,000,000 worth of raisins were purchased last year from California growers for the soldiers of the allies.

Imperial's Rapid Advance.

The following interesting resume gives the value of the gross agricultural production of Imperial Valley since 1910:

	(No cultivation)
1910.....	\$ 5,000,000
1911.....	12,000,000
1912.....	15,000,000
1913.....	20,000,000
1914.....	20,000,000
1915.....	20,000,000
1916.....	20,000,000
1917 (Estimated).....	30,000,000

Pig Production and Patriotism.

[Abstract of a paper read at the meeting of the California Swine Breeders' Association at Davis, California, May 30, by F. L. Washburn, President Western Meat Co.]

The unprecedented advance in live hog values has been fully justified by the high prices of grain, the high cost of labor, etc., which, in turn, have justified high values of the most extensively used hog products, viz: hams, bacon and lard. During the period of the advance, buying has been very heavy, both on the part of dealers and consumers. Apparently the wave of domestic buying has run its course to some extent, and on the Pacific Coast, reaction may set in, as high prices seem to be lessening consumption. In fact, the Chicago market of last Monday showed considerable decline, the average cost at Chicago being 15.35, with Missouri River markets on a proportionately low basis. The Western Meat Company is now paying 15½¢ at South San Francisco for hogs of 150 to 300 pounds range, with a premium of 15 cents per cwt. on the live weight for each 1 per cent of yield in excess of 77 per cent. However, we regret to say that the premiums we have paid, especially during the last sixty days, have been few and far between.

UNFINISHED STOCK LEAVING CALIFORNIA.

One of the discouraging features of late has been the comparatively heavy movement out of California of small unfinished hogs and of surplus breeding stock to Northern and Eastern points. These hogs, I dare say, have been purchased at anywhere from 8 to 10¢ per pound, and those fortunate enough to be able to put these hogs into marketable condition will, without doubt, be amply rewarded; for the corn fed to these hogs in the East is the highest priced corn on record and will cost more than barley in California. The exceedingly high price of grain is doubtless responsible for this exodus of hogs; but now that the price of barley has shown a decline, and the new California barley crop is about to become available, it would seem that our hog owners should do everything pos-

sible to keep their young stock as well as their brood sows within the state, as the gains from 2c barley, with the proper supplementary feeds, can hardly help but be profitable. We therefore strongly recommend that all hog raisers who intend feeding stock for the market provide sufficient feed to really put a good finish on the stock which they expect to sell.

GOOD HOGS COMMAND A PREMIUM.

It has been said that there is no inducement to turn out good hogs in California, as the packers pay just as much for the poor hogs as for good ones. We believe that our premium system should largely overcome this objection, and most assuredly so in all cases where we can come into direct touch with the producer. Perhaps some of you have seen the advertising copy which our company has been running in some of the newspapers, and farming periodicals, in which we state that our best grade of hams and bacon, the Mayrose brand, is produced from specially selected hogs, which are grown and finished in California.

Our general sales manager says that it took courage to go before the public and frankly tell them that the grade of our hams and bacon which we had decided to make our top grade, is selected from choice California-grown and fed hogs, instead of from Eastern hogs. It did take courage to do this, and we still have it—viz: the courage of our firm conviction, that the California grain-fed hog makes every bit as good pork as his Eastern corn-fed brother.

GIVE THE CALIFORNIA PIG A CHANCE.

Our slogan in connection with the Mayrose ham and bacon advertising, "Give the California pig a chance," has been fairly well received by dealers and consumers, and we need hardly add here that we look to you hog producers to be the backbone of our support in your own communities. For the success of Mayrose hams and bacon, is primarily the hog raiser's success, as he is the first man to receive the profits made from the marketing of good California hogs under our Mayrose brand.

While we cannot tell an alfalfa finished hog until after he is dead, there is certainly no trouble whatever in doing so at that time; and we will make it our business to see that no cuts from such inferior hogs steal their way into the selected stock which we consider of sufficiently high quality for our Mayrose brand. We look to the hog producers of California to help disabuse the minds of our own people of the old legend that California hams and bacon are inferior to those produced east of the Rocky Mountains. You can do this in no more effective way than by producing hogs which will yield the kind of pork that will prove, by the infallible test of the frying pan, that it is actually as good as the Eastern product.

Eastern hams and bacon in large quantities, continue to reach the

BASSETT'S POLAND CHINAS

For many years at widely separated show rings, under many different judges of varying type ideals, my Poland Chinas have been consistent prize-winners. My herd is large and I cull closely. The animals sent out as breeders are the very tops of a large number. I KNOW that my kind of Poland China is a profitable farmer's hog, for I send carloads of them to the packer every year—uniform in size, high in quality, quickly and economically matured and finished.

and bacon, and especially of lard, coming here from Eastern packing centers.

A BRAND DESIGNED TO RAISE CALIFORNIA QUALITY.

"More and better hogs,"—with a strong accent on better,—is fully as logical a slogan at this time as when you first heard it, as we still have a long road to travel before we can begin to compare our average quality with that of Eastern packing centers. The mere fact that we are able to select from the general run of our killing a limited quantity of hams and bacon suitable for our Mayrose brand, is ample proof that it can be done.

Since prices on live hogs have advanced, the demand for fresh pork has been practically nil, and Californians will never become extensive consumers of fresh pork until there is more uniformity in the quality from which to produce fresh pork cuts.

It may interest you to know that our hog receipts for the first four months of the current year exceeded those of the same period of last year by 14 per cent, and that they include nothing but California-raised hogs, with the exception of a very few from western Nevada.

PERCENTAGE OF CONDEMNATIONS EXCEEDINGLY LOW.

I have a report covering the condemned carcasses, and parts of carcasses, for the week ending May 19th, at South San Francisco, and you will be surely interested in knowing that out of a total killing of 3,144 hogs, 86 were condemned, 37 of them for sterilization and 49 wholly condemned for inedible grease and fertilizer. This condemnation is only a small fraction less than 3 per cent. During the same period, our losses in condemned cattle were only 2½ per cent. In our sheep killing for the same period, our losses by condemnation were practically nil, being only two carcasses out of more than 5,000 head. It is interesting to note that the percentages of hogs and cattle condemned for tuberculosis run very close together, it being generally conceded that tuberculosis in hogs is directly traceable to the heavy percentage of tubercular dairy stock.

HOG RAISING BOTH PATRIOTIC AND PROFITABLE.

Now that we are under obligations to supply our allies across the sea with such enormous quantities of provisions of all kinds, it is opportune to say that in no other way can the meat production of the country be increased as rapidly as by concentrating on the raising and proper fattening of hogs. It requires from two and a half to three years to produce a prime heavy steer, besides requiring a comparatively heavy investment in land and breeding stock. On the contrary, a hog, when properly fed, can be made to weigh from 200 to 250 pounds in from six to nine months; and bacon, as an army ration, will go further than any other meat product in nutritive and sustaining properties. We, therefore, assure you that the raising of hogs, and particularly of good hogs, is just as patriotic and important an American duty as the production of food in any other form.

SAVING THE PIGS.

At present prices of pork no farmer can afford to so neglect his hogs as to allow any unnecessary loss of young pigs. We have been watching the way a farmer with lots of other farm work has been caring for three brood sows the past month, and hardly a week has passed that he doesn't lose two or more pigs. The reason is that he allows all of his sows to run together, and as there is a difference in the ages of the different litters, the biggest ones get most of the milk from all three sows and the smaller ones do not get enough nourishment to grow. Half a day's work in fixing some fences would overcome this loss and the younger pigs would thrive better.

This Rugged Car Has Twice the Needed Strength

John W. Bate, in the past three years, has doubled our margins of safety. Now every important part in Mitchells has 100 per cent over-strength.

This means better steel. It means larger parts. In these times it means much added cost. But it also means a lifetime car. It means a safe, economical car. A car which has proved that it can run 200,000 miles. That means 40 years of ordinary service.

Millions in Extras

There are also 31 features in Mitchells which nearly all cars omit. Things like a power tire pump, for instance.

There is 24 per cent greater luxury than in any other car in its class.

These extras will cost us on this year's output about \$4,000,000. That is, for this over-strength, these extra features and this added beauty.

All Free to You

But all this added value costs you no extra price. Note that Mitchell prices, for either size, are below most fine-car prices.

We save in our factory cost. This mam-

moth plant has been built and equipped to produce this one type economically. John W. Bate, the efficiency expert, has cut our factory cost in two. Even the Mitchell bodies are built here, under these up-to-date methods.

That saving pays for these extras. We save all waste, and spend that saving on a superlative car.

Please see that car. See how it differs from other cars you know. Note its many unique attractions. You should know these things before you buy a car.

If you do not know the nearest Mitchell dealer, ask us for his name.

Live Stock and Dairy Notes

Livestock breeders all over the State are invited to send on postal cards, notes regarding their sales, State and County Fair intentions, new stock, etc.

The Dairy.

N. H. Locke Company recently sold to R. E. Watson, Modesto, a fine Jersey bull, Lily's Governor Valet of L.

The bulls admitted to the Guernsey Herd Register now number 43,625 and the cows 72,614, a total of 116,239.

The Nicolaisen Cheese Company has leased the stock and appurtenances of the John R. Denman ranch near Petaluma and also a ranch owned by Denman at Two Rock.

The holdings of butter in cold storage in Los Angeles May 10, 1917, were 76,518 pounds against 16,728 pounds the same date last year, an increase of 59,850 pounds.

There was in cold storage in Los Angeles May 17, 1917, 95,508 pounds of butter against 46,332 pounds the same date last year, an increase of 49,276 pounds.

Directors of the Chicago Butter and Egg Board have prohibited further trading in futures, giving as a reason their desire to help the government as patriotic citizens.

The American National Livestock Association has passed resolutions to co-operate most effectively with the President of the United States and Congress in the movement to increase production.

Former Governor George A. Carlson of Colorado, who has been touring the State lecturing on "Preparedness," milked the famous Tilly Alcarra at the Morris & Sons dairy ranch, near Woodland, recently.

Mr. J. W. Clise of Redmond, Wash., writes that he has filled an order for a carload of 25 young Ayrshire bulls, and the same number of Ayrshire heifers. These were shipped to another State taking possession of an untired and promising field for Ayrshires.

W. M. Colbert & Sons of Corning recently bought, through McLouth of Orland the purebred Jersey bull that has been heading John A. Lee's herd in Kentucky. This bull's mother averaged 45 pounds milk daily for 125 days, with a high mark of 57 pounds. Her milk tested 5.3 on the average.

The high scores on cheese at the California educational butter and cheese scoring contest, held at Fresno May 2, were as follows: Cheddar—Arthur Schoenrock, White & Terry Cheese Factory, Galt, 93½; California (Granular), Ray Weedmark, University Farm, Davis, 93; Jack, C. Basciarini, 92½.

Cold storage holdings of butter on May 9, 1917, as reported to the U. S. Department of Agriculture, are as follows: The 211 storages that reported holdings on May 1 of this year and last show a present stock of 2,433,144 pounds as compared with 1,081,913 pounds last year, representing a considerable increase.

Colonel Harris Weinstock, State Market Director, proposes making California the greatest dairy center in the world. The survey just made shows that the production of dairy products in California for 1916 amounted to \$40,310,105; the consumption to \$37,774,694, leaving a surplus for exportation of \$2,535,411.

Because Swiss cattle owners are not able to obtain oil cakes from Spain and America and the import of other fodder has also been practically cut off, the milk production has been enormously reduced. Butter has become so scarce that no family can obtain more than half a

pound per week, and the prices have increased from three to four hundred per cent.

Estimates of losses of livestock during 1917 expressed in percentage of total supply, based upon reports of agents and correspondents of the Bureau of Crop Estimates, United States Department of Agriculture, are as follows up to April 1: Horses and mules, losses from disease 1.69; Cattle all ages, losses from disease 1.94, losses from exposure 1.45; sheep, losses from disease 2.17, losses from exposure 3.28; lambs, losses from disease and exposure 6.03; swine all ages, losses from disease 4.87.

Belladia 31909, owned by Walter H. Dupee, Edgemoor Farm, Santee, Cal., has completed a record of 19631.9 pounds of milk and 934.05 pounds of butterfat in one year. This performance entitles her to seventh place in the aged cow group of the Class Leaders in the production of butterfat, and fifth place in the production of milk. Another good Pacific Coast record has been made on this farm. Imp. Mildred II. of les Godaines 55120 A. R. 4111 has recently finished a test of 14890.9 pounds of milk and 702.24 pounds of butterfat. She was first prize four-year-old cow at the Panama-Pacific Exposition in 1915, and was bred by Charles R. Molesworth, Island of Guernsey. Her sire is Imp. Old Paddy 16903 an Advanced Register son of Governor of the Chene 1297 P. S. and Imp. Gistana II 21338. Her dam is Petite of Park Farm 2920 F. S.

Beef Cattle.

Walter Fry, supervisor in charge of Sequoia National Park, says there will be 25 per cent more cattle grazed in the park this year than last.

Fires in the forests, the grass and brush lands and the grain fields, such as occur annually in our California dry season, cause a loss of grain, of forage for cattle and which enlist the co-operation of every loyal citizen to prevent.

The Pacific Coast Hereford Breeders completed their organization at the University Farm, Davis, last week. Constitution and by-laws were adopted. An initiation fee of \$10 and yearly due of \$5 were established and the following officers elected: President, H. H. Gable, Esparto; vice-president, W. D. Duke, Likely; secretary, W. R. Madden, Dixon.

Brawley is to have a stock yards. Seven acres near the Southern Pacific tracks are being enclosed and laid off in pens for holding and feeding livestock waiting for shipment and stock scales put in for weighing. Accommodations will be had for 1,000 hogs. The yards will be under the management of R. N. Miller, who is financing the enterprise.

Swine and Swinemen.

Frederick Johnson, Napa, reports Duroc sale as follows: Bred sow to Dr. Spencer, Sacramento; boar to L. R. Adams, Trinity county.

Haden Smith reports sale of yearling boar to Chas. Van Bonivelt, Orland, and a bred gilt to Chas. Van Orsdel of Orland.

Sheep.

Sheep and lambs are getting to be more plentiful in the proper killing condition, according to meat dealers.

Owing to the wretched weather conditions in Scotland the mortality amongst lambs has not been so great for fifty years before.

The sheep cheese industry of western Yolo county is growing rapidly and the demand for the product is showing a steady increase, according to the Santa Rosa Republican.

The price paid in April by the United States government for woolen fabrics was 50 per cent higher than paid for the same material in December, 1916. The government is taking practically all the wool that is produced and converting it into cloth for soldiers' uniforms and blankets.

Horses.

The popularity of the Percheron sire, has steadily increased in spite of the competition of other breeds. The breed that has won high favor with American farmers after 60 years of trial.

At the meeting of draft horse men held at Davis last week, a resolution was passed asking for the enforcement of the Stallion Registration law. It was the consensus of opinion that the purebred draft horse industry presented a fine opportunity for breeders at this time. The association will aid in the holding of horse shows over the state this fall.

Livestock Miscellaneous.

The largest number of sheep grazed on any single National Forest is 315,740, finding pasturage on the Humboldt in Nevada, while the largest number of cattle—75,818 head—is found on the Tonto in Arizona.

The land holdings of the Henry Miller (Miller & Lux) estate in Merced, Fresno, Madera and Stanislaus counties, and the personal property in Merced county, aggregates an appraised value of between \$9,000,000 and \$10,000,000.

On February 20, 1917, a special census was taken of the livestock in the Kingdom of Denmark. The number of horses and colts is set at 538,000, as against 515,000 at the same period last year. There were 2,453,000 head of cattle, as compared with 2,290,000 the previous year. The number of swine is reported as 1,981,000, while in the spring of 1916 the total was 1,983,000. Sheep and lambs totaled 270,000, as against 254,000 last year.

Interesting Holstein Meeting.

A meeting of Holstein breeders was held at Chico Tuesday evening, at which three important ideas were brought to the front.

Vanderlyn Stowe made the announcement that lands of the Stanford ranch at Vina would be placed under irrigation, houses and other improvements built to be rented out for a term of years to tenants. While the Stanford trustees feel they cannot at this time sell off parts of the ranch, yet by securing tenants for small tracts they will be making places for many people to get a start on the land.

E. H. Van Norman of the State Farm impressed the breeders with the necessity of co-operative association action in getting purebred bulls into the hands of new breeders and young breeders. Also that constructive breeding means more than getting a seven-day test. The cow that can produce the most milk and but-

terfat in 365 days is the cow that pays when feed is high.

State Veterinarian Charles Keane read an address, taking up the question of tuberculosis-free herds. This movement has been under way in twelve other States for several years. The doctor is anxious to hear from breeders upon this subject. He stated there were several purebred and hundreds of grade herds in California that are tuberculosis free, and would be eligible to be included in such register. His idea is to have two classes, one of older animals and one junior class, that would be certified free from tuberculosis. The advantages are many, especially to the purebreds—one being that if cattle were sold they could be moved from their locality without testing and delay.

Calif. Jersey Breeders' Association Meeting.

The meeting at Davis of the California Jersey Breeders' Association occurred May 30. Vice-president D. F. Conant filled the chair. Mr. E. L. Brewer, field agent state of Washington, American Jersey Cattle Club, spoke on the "Feeding of Register of Merit Cows." Dean H. E. Van Norman, of the University Farm School, talked on different topics of the day; Prof. Gordon H. True, on the "Importance of Official Records"; Prof. F. W. Woll, on the "Dairy Cow Competition and Testing"; Mr. E. C. Voorhies, on "Fair Conditions"; Mr. Guy H. Miller, on "Exhibiting at the Fairs"; Mr. J. M. Roberts, field agent in California, on the "Organization of Community Breeders' Associations and Their Relation to the State Organization."

Meeting of California Swine Breeders.

At the meeting of the California Swine Breeders at Davis last week C. C. Cunningham was unanimously re-elected president, Prof. Thompson secretary and treasurer, and W. W. Everett was elected vice-president. The following additional directors were elected: A. D. McCarty, W. S. Guilford, H. L. Murphy, C. M. Slocum, R. H. Whitten and Mark Bassett. It was decided to hold a donation sale of hogs in order to raise funds for the association. The following committee was appointed to get up the sale: H. E. Richardson, Wm. Pearson, R. L. Robinson, Geo. Murphy, Wm. Bernstein, Maurice Rucker and C. L. Tubbs.

Vina Ranch Sale Opens Well.

The first day of the Vina Ranch sale of Holsteins, held June 5, was quite successful and at this writing the other two days promise to be equally as good. A crowd of about two hundred were in attendance and the bidding lively. Ten heifer calves were sold for a total of \$905; 44 heifers totaled \$8,595; 26 cows sold for \$6,210; 20 bulls, mostly under one year, brought \$1,750.

The highest price paid on this first day of the sale was for a cow, bid in by G. H. Umbesen of San Francisco, who paid \$625. The cow will be placed on Mr. Umbesen's ranch at Anderson.

Our Spring Pigs Are Mighty Good Buys

We have for sale a limited number of specially selected spring pigs, sired by Mayhews Leader 6th, a son of the \$3,000 Grand Champion of the World, Grand Leader 2nd.

These pigs are well developed and are excellent value at their prices. All are cholera immune. The guarantee of Anchorage Farm is behind every pig.

THE SACRAMENTO HOLSTEIN SALE.

There was a light attendance of breeders and dairymen at the Sacramento Holstein sale and some of the cattle showed effects of the high price of feed, not being in condition to bring the best prices in the auction ring. The general average for 64 head was \$235. Bulls averaged \$264. Cows and heifers, \$230. The top price, \$1,400, was paid by Gion W. Gibson for a yearling heifer consigned by Bridgford Company. The highest price bull was Manteca Gelsche Segis Lyons, consigned by the Henderson Company, and bid in at \$460 by C. C. Lester, Gilroy. Rhoades & Rhoades were auctioneers. An excellent free lunch was served. The following were the buyers: Gion W. Gibson, Williams; Gotshall and Magruder, Ripon; J. H. Phillips, Fresno; W. F. Calhoun, Healdsburg; Napa Hospital; Boneta Stock Farm, Woodbridge; J. K. Yoakum, Woodlake; Geo. P. Robinson and E. J. Weldon, Sacramento; Geo. Kounias, Modesto; R. C. Geulkim and A. C. Holly, Dixon; C. C. Lester, Gilroy; H. E. Cornwell, Modesto, and Kaiser Bros., Ceres.

The consignment of the Bridgford Company consisting of nine heifers and two bulls brought \$4,875, an average of \$443 per head. Spring Farm Cornucopia Ormsby, who topped the sale at \$1,400, is probably the best bred animal that ever went through a sales ring in California. Her dam, put on test immediately after arriving in California from the East, made a record of 31.87 pounds, while her sire's dam is a former world's champion, with a record of 44.18 pounds. At the close of the sale Gotshall and Magruder secured this heifer from Gion W. Gibson, the successful bidder, giving him a substantial profit on his bargain. Another splendid heifer of the Bridgford consignment, sired by King Korndyke Sadie Vale, went to Gotshall and Magruder for \$600. They bought in all nine head, including the bull Pride Fayne Valdessa, a grandson of King Hengeveld Aagie Fayne, and of the world's record cow Finderne Pride Johanna Rue, consigned by Palo Alto Stock Farm.

Another large buyer at the sale was J. E. Scholefield, manager of the Boneta Stock Farm, who is establishing a purebred herd at Woodbridge. He secured 15 females and a young son of Judge Lyons, consigned by Henderson Company.

George C. Kounias of Modesto bought three head, including the young bull Toyon King Korndyke Soldine, a grandson of King Pontiac Segis Korndyke and out of a dam with a record of 33.28 pounds.

W. H. Calhoun, who is building up a fine dairy herd at Healdsburg, secured a son of Prince Gelsche Walker out of a 25 pound dam consigned by the Bridgford Company.

Kaiser Bros., who are establishing a purebred herd at Ceres, bought eight head.

DOS HERMANOS REGISTERED DUROCS—Duveneck & Pickersgill, Ukiah, Cal.

DUROC-JERSEY REGISTERED HOGS—River Bend Farm, St. Helena, Cal.

REGISTERED DUROCS—Either sex at all times. W. P. Harkey, Gridley, Cal.

THE DEVILBESS HERD of large type Durocs. J. M. DeVillbess, Patterson, Calif.

Yorkshires.

LARGE YORKSHIRES—The ideal hog for the progressive farmer. Young stock for sale. A. L. Tubbs Co., Calistoga, Cal.

LARGE YORKSHIRES—A few choice young boars and gilts for sale. Riverina Farm, Modesto, Cal.

Chester Whites.

THE BILLIKEN HERD of Chester Whites—Every rancher, every fruit grower, every one who can possibly do so, should keep at least one brood sow; we must increase our meat supply. I am offering some bred gilts and sows at very reasonable prices to help this along. 2 young tested sows to farrow in July; 6 spring gilts to farrow in September; 18 fall gilts to farrow in October; boars ready for service; weaned pigs, both sexes, ready for delivery. Write for special price lists and circulars. C. B. Cunningham, Mills, California.

REGISTERED IMPROVED CHESTER WHITES—Grizzly Bear Ranch, East Auburn, Cal.

Essex.

LITTLE BLACK ESSEX—New crop nearly ripe. A few fine youngsters left. L. W. Millsap, Yolo, Cal.

Hampshires.

BELA VISTA HAMPSHIRE—Service boars and bred or open gilts. J. W. Henderson, First National, Berkeley.

Tamworths.

BEAVER LODGE TAMWORTH—Service boars. Write for prices and pedigrees. A. G. Lane, Amsterdam, Cal.

DAIRY CATTLE.

Holsteins.

PRINCE GELSCHKE AAGIE WALKER, the pure-bred registered Holstein bull, weighing nearly 2000 lbs. at the age of 3 years. He is sired by Prince Gelschke Walker, the famous bull that sold for \$12,500, and whose daughters, Miss Valley Mead De Kol Walker, Lady Hisky Walker, and others, are the champions of California at the present time in their respective ages, producing from 34 to 36 lbs. butter in seven days. As we have sold out our dairy cows, we are prepared to sacrifice this young giant for a very small sum. For details write The Beckstead Mercantile Co., Fallon, Nevada.

FOR SALE—From 1 to 70 extra fine, straight well-marked, light-colored, registered Holstein heifers, from 8 to 20 months old. Those old enough are being bred to a first-prize son of Prince Gelschke Walker, whose dam has a high yearly record. Some of these heifers are sired by bulls whose dams have from 35 to 37 pound records. They carry the very best blood of the breed and are good enough for any herd anywhere. Prices to fit any pocketbook. Geo. A. Smith, Corcoran, Cal.

GRANDSONS OF HENGVELD DE KOL and out of A. B. O. cows for sale. Prices reasonable. Write for pedigrees. Many years of constructive breeding has made my herd one of the prominent ones of the San Joaquin Valley. R. F. Guerin, Visalia, Cal.

REGISTERED HOLSTEINS—Grandsons of King Segis and of world's record cow Creamella Vale. Will build up the production and value of your herd. Write or call and see them. F. H. Stenzel, San Lorenzo, Cal.

FOR SALE—Two registered cows, one with record of 24.59. Sister to other one made 23.10 as a two-year-old. Both bred to a 30-lb. sire. Geo. Kounias, Modesto.

TULARE GUERNSEY AND HOLSTEIN Farm is offering young bulls of both breeds. Excellent breeding. Prices reasonable. W. J. Higdon, Tulare, Cal.

THE MCCLLOUD RIVER LUMBER CO., McCloud, Cal.—High-class thoroughbred Holstein bulls for sale. Write for prices and pedigrees.

J. H. HALLAN, WOODLAND, CAL.—Breeder of Registered Holsteins. Sold out at present. Watch for announcement on King Valdessa.

PACKWOOD FARM HOLSTEINS—Fine young bulls of serviceable age out of tested A. B. O. cows. W. F. Mitchell, Visalia.

TWO SERVICEABLE SONS of Colantha Sir Pontiac Aagie for sale. Moorland Farm, K. W. Abbott, Milpitas, Cal.

THE HENDERSON CO.—Breeders and Importers. Registered Holsteins. Sacramento Bank Bldg., Sacramento.

BREEDERS OF REGISTERED HOLSTEIN cattle and Berkshire pigs. Whittier State School, Whittier, Cal.

FEED, FREE RANGE, State Government land, any amount. Booklet free. Joseph Clark, Sacramento.

EIGHT JERSEY-HOLSTEINS—Tuberculin tested; \$75 each; average four gallons daily. W. J. Gormley, 409 N. Stockton st., Stockton.

Safe Scaffolding for Silo Builders.

[Written for Pacific Rural Press.]

Silo building promises to be more general this year than ever before in California; and with the increased activity comes a multitude of questions concerning modes of construction.

A stave silo on the J. S. Gibson Company's ranch at Williams was enlarged and the staging hung for the lining of a new resaw and studded silo in a way that merits commendation.

After the studding for the new silo had been raised, and secured by guy ropes and braces, two heavy timbers were placed across the top plate rail. Heavy rope blocks and tackle were suspended from these timbers to a round platform that was substantially nailed together, two tackles being suspended from each timber. This arrangement allowed the lowering or raising of the platform at will.

Work was started some distance from the ground by running a temporary course of resaw around the studding to support the studding and

other courses were added several feet apart higher up. When these had been nailed in place the staging was lowered to the foundation and the nailing of the two permanent courses of resaw and a course of tarred paper was started, the staging being raised as the work progressed. Besides effecting a saving in lumber over the ordinary cumbersome staging used, the outfit provides a safe and convenient floor for the workmen.

The addition to the stave silo was also made of studding and resaw, an iron hoop encircling the studding at the joint of the two structures. A notch at the end of each studding allowed it to rest on top of the staves bringing the inside of the studding flush with the inside of the staves, so that the resaw and paper could be carried well down over the joint to prevent leakage. As completed, both silos are 40 feet high, and have given entire satisfaction the past winter in furnishing feed to the purebred Holstein herd which is maintained on the ranch.

Systematic Calf-Feeding.

[Written for Pacific Rural Press.]

There is some system to the way Superintendent McCord of Ennis & Williamson's 120-cow dairy ranch in Riverside county raises their calves. They are graduated from one pen to another as they reach proper age. Each pen where milk is fed has stanchions under a shed roof convenient to milking barn and separator.

Calves are taken from their mothers at two days old and fed their mother's milk for a week. They get

all they will drink at first, but this is never over two quarts per feed. After several feeds look out for over-indulgence. Never give over three quarts per feed, until three months old, and never over a gallon after that. They get whole milk until three weeks old, then are gradually tapered off to separator milk in about two weeks in another pen.

Having graduated from the tapering-off pen, the calves get a two-o'clock feed daily of about three gallons dry wheat bran per ten calves, besides separator milk twice a day for each, and all the alfalfa hay and salt they need. Before they get out of this pen, they are getting a gallon of milk per feed, but are tapered off, so in the next pen they get no milk. There for a while they get four gallons bran per ten calves and all the alfalfa hay they want. The next pen consists of young stock whose feed consists of all the alfalfa hay they want and about one and a half pounds beet pulp once a day until about a year old. Then they are fed nothing but hay until they freshen.

SELECTING A 300-POUND HERD.

Unless you can breed them yourself it is no easy job to secure a herd of grade cows that will produce an average of 300 pounds of butterfat in a year and it was only through the Stanislaus Cow Testing Association that L. L. Long of Modesto was able to do so.

Mr. Long bought 46 head of grade cows last year to put on his alfalfa ranch purchasing mostly heifers before they freshened, but from herds that had been entered in the cow-testing association.

Of the lot 12 had to be sold because of low production as shown by the cow tester's report, the balance finishing their first year's work with an average of over 300 pounds of fat to their credit.

Keep cows, being dried up, in good flesh.

CUTTER'S BLACKLEG PILLS

"California's Favorite" for nearly 20 years

For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:

10 dose pkge. Single pills \$1.00
50 dose pkge. Single pills 4.00
10 dose pkge. Double Pills 1.50
50 dose pkge. Double Pills 6.00
Cutter's Pill Injector.... 1.50

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

Do You Want Long Distance Backing?

We have a son of the California State Champion three-year-old for sale. Born October, 1915; Sired by PRINCE ALCATRA KORNDYKE, whose dam is TILLY ALCATRA.

The Dam of this young bull is not a fifty-lb. cow, but she has to her credit 21,208 lbs. milk and 800 lbs. butter in one year, which is the largest record ever made in California by a Junior three-year-old.

If you are in the market for a bull, it will pay you to visit our ranch and see what we have to offer—at prices that will surprise you.

Look over our consignment at Sacramento May 31

J. S. GIBSON CO., Box 97, Williams, Cal.

"THE NAME GIBSON INSURES QUALITY."

Grain and Silage from "Gyp" Corn.

In exceptional years like the present one it behooves all feeders of livestock to conserve every available ton of feeding stuff and at the same time produce as much marketable grain as possible on his land.

Although the experience of J. E. Bennett of Keyes, Stanislaus county, in 1916, with Egyptian corn and a silo was not enjoyed in a year of such high prices as the present, it is suggestive of what may be done in conservation work this year on many dairies.

When he planted his five acres of "Gyp" corn that year it was with the idea of harvesting the grain alone, but when he saw the good forage that was going to be plowed under after harvest he decided to erect a silo and make silage from the entire field.

As the corn neared ripening time, neighbors told him it would be foolish to silo all of the good grain, so he harvested the larger heads and left the smaller, immature heads on the stalks. The total yield of grain secured in this manner was 12 sacks or a trifle over 24 sacks to the acre.

The field was then cut and run through the silo, the yield being 65 tons of silage from the five acres. At first the cows did not relish the silage, and after repeated attempts to feed it, Mr. Bennett finally secured a barrel of cane molasses, diluting it with water and poured it over the silage. Then the cows ate it readily and the entire siloful was fed out in this manner, it requiring the use of two and a half barrels of molasses for the 65 tons of silage.

Remodeling a Dairy Barn.

In 1916 C. D. Hayworth of Modesto decided to remodel his combination hay and milking barn by the installation of steel stanchions and a well-drained concrete floor, along one side of the hay mow.

The floor dimensions were planned for his herd of registered Jerseys, the depth of the stall being

four feet, eight inches long, the gutter eighteen inches wide and the runway back of the gutter about five feet wide. A one-inch drop was provided from the manger to the gutter and an equal slope was left from the outside wall to the gutter, the entire floor draining to the center, where an open concrete trough carries the liquids outside of the building and along the side wall, furnishing a carrier for the rain water from the eaves on that side of the building.

At the end of the barn the open trough runs into a small concrete basin or settling vat, which overflows into an underground tile that carries the liquids to the irrigation ditch. By means of the settling vat the solids that are washed down the gutter can be shoveled out regularly and in this manner the tile kept from clogging.

Before installing his James stanchions, Mr. Hayworth had always used home-made wooden stanchions, but to his mind there is no comparison between the two types, as the patented kind allow the cows so much more freedom and comfort.

CALF-RAISING POINTERS.

[Written for Pacific Rural Press.]

When B. M. Brown moved onto his present ranch in Tehama county the press of work led him to neglect his twelve or fifteen calves. They got scours, lost their appetites, and became thin. He lost one and took notice. He gave them salts, calf meal, dry quarters, and boiled milk. Something in the combination made them pick up right lively.

One calf he decided to kill. But two tablespoonfuls of salts on alternate days and boiled milk every day brought it through all right.

A double handful of mids was found fine to keep up calves' appetites when changing from whole milk to skimmed milk.

MORE CREAM LESS LABOR

Through Using a

NEW DE LAVAL CREAM SEPARATOR

Patriotic duty as well as dollars-and-cents self-interest now demands of every cow owner the saving of every ounce of cream and butter-fat. Likewise the saving of time that is possible through a cream separator of ample capacity, that is easily turned and always in order.

There was never a summer in the history of the country when both these considerations were of as great importance to the nation as well as to the individual producer of cream and butter.

Under present circumstances, a modern De Laval Cream Separator will save its cost every few weeks. Every cow owner owes it to himself and his fellow countrymen to effect this saving.

This is true whether you have no separator or have an inferior or half-worn-out machine, even if it be an old De Laval model.

It is important to remember, too, that if you cannot pay cash for a new De Laval machine, you can buy one on such liberal terms that it will actually pay for itself while you are using it.

Why not see the nearest De Laval agent at once?

If you do not know him, write to the nearest office for new catalog or any desired information.

Every New De Laval is equipped with a Bell Speed-Indicator

CRITICS' AND CUDDLERS' CORNER

Subscribers are welcome to praise or to condemn (in letters of not over 200 words) anything which appears in the reading columns of this journal. Contributors to this department may drive and counter-attack each other as they see fit without endorsement or response on our part.—Editors.

Averages Count, in Marketing.

To the Editor: In March Pacific Rural Press, page 358, you had an interesting table of figures as the result of orange sales in various markets of the East, shipments from Folsom. And in the May 12 issue was a caustic criticism, in a sort of an aftermath way, which was somewhat personal to Fair Oaks Fruit Co. or the California Fruit Growers' Exchange.

Fairoaks Fruit Co. had nothing to do with the Folsom shipments of the first article.

Both articles are founded upon facts, but do not state all the truth, therefore are misleading (perhaps not intentionally so).

Using the exact figures and dates of shipments referred to by your correspondent, we cite sales of Fair Oaks Fruit Co. cars in Eastern markets on corresponding dates in November and December, 1916:

	Folsom Car.	Fairoaks Fruit Co. Car.
Nov. 18	\$3.07 1/2	\$3.60
27	2.00	2.75
"	2.25	2.80
28	2.75	2.85
Dec. 5	2.15	2.50
7	1.67	2.10
10	1.90	2.35
17	1.95	2.25
18	2.65	2.00
19	1.50	2.15

With one exception, the sales of California Fruit Growers' Exchange, for Fair Oaks Fruit Co., as noted above, were materially higher than the ones referred to by your correspondent, and it surely follows, that if the grower had delivered his crop for that pool, instead of later, the swan-song might have a more pleasing tune.

Growers ought to select the marketing facility most satisfactory to them, and then co-operate with it through thick and thin. It is averages that count, and all agencies strive to obtain the best possible. The Exchange idea worked out in a pooling system is mutual indemnity against serious individual losses.—W. W. Hinsey, Fair Oaks.

Kaiser Peace Lord?

To the Editor: I wish to make a vigorous counter-attack on the letter of Reader of Angels Camp which appeared in your issue of April 28, in which he holds up the Kaiser as a great "peace lord." It is popularly supposed that the Kaiser has fallen far short of that lofty ideal, and that Wm. Jennings Bryan has him backed off the boards for peace. In our forty years' knowledge of the Kaiser we never heard of him taking any peace prizes; on the contrary he appeared as an exponent of the mailed fist and an apostle of the whetted sword. His conduct certainly has not commended him to lovers of peace. Had Reader discussed bees, beans, and barley it would have been more to the point in an agricultural journal, instead of butting in with praise of our nation's greatest enemy. (The paragraph was written before war was declared and delayed in printing.—Editor)

Evidently he wearies of residing in a bellicose country like ours where a majority of Congress and public opinion can plunge the nation into war, and might well make a better citizen of that dearly beloved Kaiser's land, where three or four men dominate the destiny of their people. We also are strong for truth.—Citizen, Indio, Calif.

Danger in Increasing Production.

To the Editor: On one hand the farmer is being urged to utilize every foot of his ground for crops to help food supply and on the other he is handicapped with shortage of help to harvest and care for that same crop. Some well meaning persons suggest we pay better wages. If we knew we could make enough for expenses and taxes and

a little left to live on, after all our hard work, we wouldn't care how much wages we paid.

I don't believe any business man would take up a business where he couldn't break even, yet they ask us to do this. We are told what we shall pay and what we shall receive for our products. I think we should have the say one way at least. We may be compelled to confine ourselves to raising enough for our own needs and turning the rest into a hog pasture, to be able to handle it. I don't believe Uncle Sam will ask us to work at a loss. Some one, who is honest enough, had better get busy and regulate prices.—An Orchardist, San Juan Bautista.

Caustic for Dehorning Kids.

To the Editor: Can kids be dehorned by using caustic?—P. C. H., Selma.

Yes, as you would dehorn a calf.

VETERINARY QUERIES

[Answered by Dr. H. B. Wintringham, Petaluma, Cal.]

[Subscribers wishing an immediate reply should send money order for \$1.00. No charge for questions answered through this department. Name and address of subscriber must accompany each query.]

Calf With Hair Falling Off.

To the Editor: I have a calf whose hair is all coming from its back, legs and around the head. It seems otherwise in good health. Gets warm skim milk and calf meal three times a day and runs on alfalfa, and has clean bedding ground. Can you advise me what to do for it? How long should calves get milk when they are to be kept for beef, considering that they have good pasture?—M. E. S., Kellogg.

Bathe every seven days with the lime-sulphur dip as prescribed by the government. Feed milk up to the time of slaughter for veal.

This Mare Is a Bleeder.

To the Editor: I have a black mare, of a rather nervous temperament. She had a hemorrhage a few days ago. A train passed us on the highway and she got very

excited. She made a roaring in her lungs, then the blood gushed from her nostrils. Is this anything serious?—J. E. B., Turlock.

Your mare is a bleeder, and I can offer no specific remedy. Try giving one half ounce of Fowler's Solution twice a day.

Pigs Have Leg and Eye Troubles.

To the Editor: I have a pig that walks on its knees, and its hind feet touches its front feet. It seems to be sore on the shoulders and under the throat. I have some other pigs that foam runs from their eyes and they get sore and can't see out of them. Please advise.—J. R., Elmira.

Give sick pig 4 oz. Epsom salts. Treat eyes with saturated solution Boric Acid daily and examine for a foreign body which should be removed.

Heap big mileage!

Keyed-

Savages are "keyed" by means of serial numbers. And are distributed by our own organization, not sold to middlemen in huge quantities and carried in stock sometimes for a year or more.

We know just where a casing is and how long it has been there. The minute a tire reaches the doubtful age, the point beyond which there is possibility of deterioration, it is replaced by a new casing.

You are always sure of getting live tires, full of "pep" and miles, when you buy

Poultry for Profit

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

MILK-FED BROILERS.

In feeding for milk-fed broilers the chickens should be in fair condition to start with, because they will only stand the confinement and concentrated food just so long. In cool weather or in a good building they will stand 17 to 20 days, but in warm weather usually two weeks is all you can hold the appetite up. Just as soon as the appetite fails they are done for. May as well sell or turn them loose.

If you can buy oat flour, ground oats with the husks removed, do so; it makes the whitest and firmest meat. If you cannot get that, mix one quart shorts, two parts white middlings or low grade flour, and five parts coarse corn-meal; a little salt may be added for flavor. Now take a quantity that you think the chickens can eat at one meal and mix with good thick buttermilk into a liquid that will just pour out of your bucket. The feed must of course be put outside the coops, which should have slats and be up from the ground. Feed twice a day and don't overfeed at first, keep them a little hungry, no water is given, no green feed nor anything but just this buttermilk mash, and don't make the mistake of mixing too stiff. The last four or five days add a little melted tallow to the feed.

MERCURIAL SALVES.

In your book, "California Poultry Practice," you mention a mercurial salve as a preventive for lice. In a couple of weeks I expect to buy a number of six-weeks old pullets, would you advise the use of this salve on them, if not what would you suggest? Please answer through the Press.—Mrs. J. P.

Yes, it is all right to use as directed in book on all stock except breeding stock. It is not advisable to use it on any kind of breeding stock or on chicks under six weeks and do not rub too hard. If the chicks are clean when they arrive I would defer using the salve until they are a little older, or make it much more reduced in strength than for grown fowls. This same lady says "I have had such good results from using 'Benetol' for diarrhea in fowls, that I thought it might help someone else. I put five or six drops of full strength Benetol into a small capsule and give it the fowl every other day for a week and they all recovered quickly." Now I will say that I have used Benetol for human ills, have seen it used for indigestion with very good results and have no doubt at all but that it will answer just as well for poultry. All drug stores sell Benetol in 25 cent bottles.

Purebred and Commercial

[Written for the Pacific Rural Press by Harry Mortenson, Susan.]

POULTRYMEN'S MEETING AT DAVIS.

Dean H. E. Van Norman welcomed a small but interested gathering of poultrymen at the University Farm on May 30. Through some misunderstanding and on account of the press of work at home, a number of members of the State Poultry Breeders Association and the Ameri-

can Poultry Association were unable to attend. The University Farm is making good. Being an experiment station as well as a school of instruction, many a hard nut is cracked. It is almost impossible as well as expensive for the average poultry breeder to try out the different methods of poultry production, and for this reason the State supports an institution like the Davis Farm.

The short course this year is to be limited to 40 students. The facilities of the plant can accommodate no more. Those 40 men and women, who are fortunate enough to attend this year, will never regret it. The Farm will teach them how to rear chicks successfully and how to handle them afterwards, as well as additional information that cannot be measured in dollars and cents.

One of the points brought out by Prof. Dougherty in his address was the fact that it will be necessary to increase the egg yield to more than 115 eggs per year; that number being required to make both ends meet when feed is worth 4 cents per pound. It might be well to mention that the average egg yield in California today is 87 eggs per year. It is up to the farmers and commercial

poultrymen to raise this standard in order to remain in the business. We must hatch from good, known, pure-bred stock. Do not buy your chicks indiscriminately. Such a method is expensive in the long run. Either raise your own or get them from reliable breeders. See that the little fellows are hatched right and give them proper care. Cooperation was strongly urged.

HIGH-PRICE EGGS GOING INTO STORAGE.

A prominent poultryman of Sacramento informed us the other day that he was getting 38 cents for a lot of eggs that are being put in storage. If a profit is expected after the eggs are stored for four or five months they should bring 50 cents per dozen. Such being the case, what will fresh eggs bring about Christmas time?

BUTTERMILK CURD FOR POULTRY.

We received an inquiry the other day regarding dried buttermilk curd and its comparison to meat scrap. At the present market price of both products the curd is the cheaper and if not spoiled will no doubt be better for the hens.

Poultry Breeders' Directory

BARRED PLYMOUTH ROCKS—COCKERELS—Cockerels—Cockerels—Yes, we have them; also Hens and Pullets—all bred from our Champion Winners at California's leading shows. Also hatching eggs. If it's Barred Rocks you want, get in touch with me right away. Have bred them exclusively for nine years. Send for Catalog. Chas. H. Voden, Box 396, Los Gatos, Cal.

ORDER YOUR BABY CHICKS NOW—for next two weeks. Last chance. White Leghorns, 8 cents; Brown Leghorns, 10 cents; Rhode Island Reds, Black Minorcas, White and Barred Rocks, 12 cents—any quantity, 20 to 500. First class chicks and safe delivery guaranteed. Circular free. Roofden Poultry Ranch and Hatchery, Campbell, Cal.

BABY CHICKS—HATCHING EGGS—White, Brown Leghorns, R. I. Reds, Barred Rocks; sturdy chicks from well-mated fowls; prompt, efficient service. Write for circular. Campbell Poultry Ranch, Campbell, Cal.

Mrs. Best's Letter.

LADIES' SUMMER WEAR.

My Dear Friends—One of the garments that has undergone many changes is the middy blouse. We still see the middy of several seasons ago, with the colored collar and cuffs and the lacing at the throat and at the sides, and it makes a very satisfactory garment. It can be worn over a white skirt or over a colored wool, and looks well in either case, but the new middy is very much longer and very much fuller. In fact, some of them seem to start under the arms and go out until at the bottom they are full almost to the point of clumsiness. Many of the white ones are smocked with a colored thread and the collar and cuffs will have the same color, and other white ones have large collars, fancy pockets and a band around the bottom in bright plaids. The colored ones are of bright green, rose or yellow, with fancy collar, cuffs and pockets of cretonne. Not all the models are belted, but it is rather a more graceful style than the loose ones. These colored middies are pretty with white skirts.

The lingerie blouse gives promise of being better style this year than for some time. The new imported voile can hardly be told from Georgetown crepe in appearance, but it is not quite so expensive. Lace is used for trimming, not only on collar and cuffs, but upon the waist also. Clusters of tiny tucks with narrow lace ruffles make the fronts of the blouses beautiful indeed. These waists are said to launder well, but must not be starched, for their beauty is in their softness.

Quite a number of waists are shown with the high neck and small turnover collar, and with these are worn ribbon stocks, but the low-neck waist is more popular. Many women do not care for the low-necked blouse with a tailor suit, and for them there are lace jabots that can be worn with any blouse. They are made of lace, just a collar that fastens at the back of the neck, with a pretty frill of lace in the front, which entirely covers up the bare throat and gives a pretty finish to the suit. While a good tailor suit is the foundation for a suitable street or church costume, it is the accessories that mark the difference between a well-dressed woman and one who is not. The trim, becoming hat, worn with a face veil that keeps the hair from blowing, well-fitted shoes with heels in proper condition, and good looking gloves, go a long way toward making a woman look well dressed.

Some of the new so-called sport suits are combinations of plaids and plain colors, one very pretty one being a blue and brown pleated plaid skirt, with coat of plain blue velour, with the collar and straps on the sleeves of the plaid. So often the coat of a suit outlasts the skirt, and this would be a good season to make a new plaid or striped skirt to wear with an old coat, if it were still in good condition.

Quite the most modish thing in the sport suits for summer are the white gabardine skirts with coats of velvet. One very attractive one was

THE HOME CIRCLE

in a plain box coat, with two large white buttons in front and a large white collar. This was in black, but they are shown in colors as well.

The black and white checks are not as popular as they were, but there are some seen on the streets and worn with an all-black hat they make very good-looking street suits.

Silk handbags continue to be popular, but they have by no means crowded out the leather. For shopping or hard usage nothing takes the place of a leather bag.

ROSABELLA BEST.

ANOTHER POTATO CAKE RECIPE.

Editor Home Circle: Please publish this recipe for potato cake for Mrs. E. M. C. of Modoc Co. One cup butter, 2 cups sugar, 4 eggs, $\frac{1}{2}$ cup ground chocolate, $\frac{1}{2}$ cup sweet milk, 1 cup chopped walnuts, 1 cup warm mashed potato, 2 teaspoons baking powder, 1 teaspoon each of cinnamon, allspice and nutmeg. Flour enough to make a thick batter, bake slowly 1 hour. This makes a large cake and is a good keeper.—Mrs. C. C. S., Fallon, Nev.

BAKER'S ICING.

Two cups of granulated sugar, 1 teaspoon of glucose or corn syrup, 1 cup of water. Boil together without stirring till it forms a thread when dropped from a fork. Take from the fire and let stand until luke warm. Beat until like a soft dough, then knead until thick and creamy. Pack in a covered jar and put in a cool place. When ready to use, take out amount wanted in a bowl, set bowl in hot water until frosting is soft enough to spread, add flavoring and use. If kept covered, this icing will keep indefinitely.

NOVEL TABLE DECORATION.

Cut off the sprouting carrot tops, leaving almost an inch of the vegetable. Fit them into a dish about four inches in diameter, so that the tops will be able to peep through as they are arranged in tiers one above the other. Keep covered with water and in the light for two weeks, and there will be a beautiful fern-like growth that makes a good center piece for the dining table.

Good Health.

[By H. E. Pastor, M. D.]

The Coffee Question.

The writer has been frequently asked whether the use of coffee as a beverage is harmful or harmless. The moment you mention coffee, as also certain other things in the same class, the food faddists are instantly lined up into two hostile camps. Some, as the Arabians themselves, regard it as a gift from heaven, while many of its opponents denounce it as a rank poison. Perhaps there is some basis for the contentions of both sides, depending on whether the beverage is used in moderation or grossly abused. Taking the data as a whole that has been accumulated in respect to its physiological action, it would be difficult to show that its moderate use by people in fairly good health has any injurious effect. On the other hand, its effect on people of weak digestion or enfeebled nervous system may be decidedly harmful. In the quantities generally used the effects of coffee are merely transient. That it has the property of temporarily obviating or relieving mental and physical fatigue is unquestioned. It is unquestionably true also that its excessive use brings in its train such injurious symptoms as headache, nervousness, dizziness and insomnia. The use or non-use of coffee seems to be a question that each individual can best determine for himself. If he finds its use is deleterious to his health he should cut it off his bill of fare. If, on the other hand, he suffers no ill-effects from its use, but finds its action is salutary in promoting digestion and pleasing the palate, there is no reason excepting "H. C. L." why he should abstain from its temperate use.

Garlic in Consumption.

We have received an inquiry as to whether the belief in garlic as a preventive of consumption, or a cure, has any foundation. This belief is current among a large number of people and has some acceptance among medical men, though other members of the medical profession flout the claim. A well-known Irish physician of wide repute, Dr. Wm. C. Minchin, once wrote a book on the subject. He strongly advocated the use of garlic among consumptives, and his views were endorsed to some extent by prominent medical preceptors in London and Vienna medical schools. Dr. Minchin even went so far as to declare that garlic was not only valuable in the pulmonary form of tuberculosis, but was efficacious in tubercular affections of all accessible parts of the body. In the scattered Italian settlements in San Francisco it is stoutly maintained by the Italians themselves that the free use of garlic will give complete relief in most cases of consumption and effectively prevent the spread of its contagion to others. The writer has not personally tried this lay remedy, but sees no reason why it may not be tested out, as it costs little and is entirely inoffensive, except as to odor—and the odor is much more tolerable than the disease.

Don't over-exercise. As a rule, famous athletes are short-lived.

FORGOT SOMETHING.

He called for a city beautiful;
He shouted it day by day;
He wanted a city where noise was not,
Where the spirit of art should sway;
He wanted a city that should be fair,
Where filth might never be seen,
And forgot, in spite of the zeal he had,
To keep his back yard clean.

NEW BREAD RECIPES.

Rice Bread—One cup lukewarm water or milk, 1 cup uncooked rice, 1½ teaspoons salt, 1 tablespoon sugar, 1 tablespoon shortening, ½ cake compressed yeast, 2 cups wheat flour. Steam the rice with ½ the liquid until it is soft. Put the sugar, salt and fat into the mixing bowl and pour over them the remaining liquid, ½ cup. When the mixture has become lukewarm, add the yeast and ½ cup of flour. Allow this sponge to rise until light. Add the boiled rice, cooled until lukewarm, and the rest of the flour. This dough is so thick that some pressure is required to work in the last of the flour. Let rise until double in bulk, form into a loaf, place in pan and let rise until nearly to the top of the pan, then bake.

Rye Bread—One quart milk, 2 tablespoons sugar, 4 teaspoons salt, 2 tablespoons butter, 1 cake compressed yeast, 3 cups flour (1 cup wheat and the remainder rye). Make just as wheat bread until after the second molding. Then the dough should be placed in a 6-quart bowl lined with a cloth, into which flour has been rubbed. When the dough has risen to the top of the bowl, turn out on a hot inverted dripping pan over which a tablespoon of flour has been sprinkled, and place immediately into a very hot oven. After ten minutes, lower the temperature and bake for one hour.

DOMESTIC HONEY PLANTS.

A large number of domestic honey plants can be grown on the average farm, the most profitable being clover, alfalfa, vetch, soy beans and cow peas. Alfalfa and clover are the most important of these for honey plants, clover being especially good on account of its long blooming season, if sufficiently watered. Sweet clover is a very important honey plant and wherever it grows, will always be found the honey bee. Buckwheat is also a good domestic honey plant, but buckwheat honey is dark in color and has a flavor not liked by everyone. All domestic fruits are good honey plants and the average farm has enough honey plants to support from one to several colonies of bees, producing enough honey for the use of the family.

The smallest thing, well done, becomes artistic.

SAN FRANCISCO.

San Francisco, June 6, 1917.

WHEAT.

It now being established that there is enough wheat here for all needs and that there are prospects for a fairly good crop, some declines have taken place and the general tendency of the market is towards lower rather than higher prices. Sonora wheat, re-cleaned.....None offered Northern Club.....None offered California Club, per ctl.....None offered Northern Bluestem.....\$4.90@5.00 Northern Red.....4.75@4.80 Russian Red.....4.65@4.75

BARLEY.

With an average crop in sight, barley has followed wheat towards a lower basis. There is no doubt that expectations of the Government curbing speculation in grains has assisted in easing off this market in sympathy with other grains. Shipping, ctl.....Nominal Brewing.....Nominal Choice feed, ctl.....\$2.25@2.30

OATS.

There has been very little trading in oats during the past week, and white feed shows a very natural decline. White feed, per ctl.....\$2.65@2.70

BEANS.

With light stocks on hand, the market on most lines is quiet though firm at somewhat reduced quotations. There is a considerable acreage yet to be planted in the valleys and dealers in San Francisco are shipping seed beans almost daily. Hayos, per ctl.....\$11.00@11.10 Blackeyes.....9.25@9.50 Cranberry beans.....11.90@12.00 Horse beans.....5.50@6.00 Small whites (south).....16.00@16.25 Large whites.....16.00@16.25 Pinks (south).....11.00@11.30 Limas (south, re-cleaned).....16.00@16.25 Red kidney.....13.00@13.50 Mexican reds.....11.25@11.50 Tepary beans.....None offered Garbanzos.....\$6.25@6.50

CORN.

The situation here is now dominated by the arrivals of Eastern corn. This, however, has not held up to last week's quotations, having declined, for Eastern yellow, to \$3.25@3.30. There is now no Milo maize to be had here. A drop in Egyptian is noted, and it is rather weak even at the present figures. (First-hand price on strictly first-class Eastern Yellow, San Francisco.)

California, sacked.....\$3.25@3.30 Milo Maize.....3.40 Egyptian.....None offered \$3.75@4.00

HAY.

Hay arrivals during the last week were about up to the average of recent weeks, shipments still being confined to the old crop. None of the new crop has yet reached this market, and the demand being rather light there is no particularly urgent call for it. Enough old stock is on hand here to meet all requirements for the time being, and as things now stand it may be several weeks before new hay becomes a factor here. Harvesting is well under way, with good weather throughout the State. Advances concerning the new stock indicate good quality and large yield.

Wheat, No. 1.....\$27.00@28.00 No. 2.....25.50@26.50 Tame oats.....24.00@30.00 Wild oats.....Nominal Barley.....\$25.00@27.00 Alfalfa, new, first cut.....14.00@15.00 Stock hay, new.....10.00@12.00 Straw, per bale.....1.00@1.10

FEEDSTUFFS.

An abundance of fresh feed in the irrigated districts has had the usual bearish tendency on markets. Nearly all lilles have declined sharply, especially rolled barley, which is now quoted \$10 lower than last week's prices. On the other hand, coconut cake or meal has been advanced a dollar. Beet pulp is again on the market, being quoted at \$35 to \$40. (Per ton San Francisco.)

Beet Pulp, per ton.....\$35.00@40.00 Alfalfa meal, per ton.....30.00@32.00 Bran, per ton.....36.00@47.00 Oil cake.....None offered Coconut cake or meal.....\$7.00@8.00 Cracked corn.....22.00@73.00 Middlings.....58.00@60.00 Rolled barley.....47.00@48.00 Tankage.....None offered Rolled oats.....55.00@56.00 Rice middlings.....None offered Rice bran.....\$30.00@33.00 Shorts.....50.00@51.00

POTATOES, ONIONS, ETC.

In spite of the heavy receipts during the week, prices are well maintained. Deltas still hold out at \$4.00@4.50, but there are no Salinas to be had in this market. Onions are also becoming scarce now. The large crop in Southern California has caused that section to practically rule the market for the present, and heavy shipping eastward is taking place from Los Angeles. Onions show a decline in Delta reds to \$1.40@1.60, due to large arrivals. It is reported by dealers and growers that the California onion crop is the heaviest in years and of a surpassing quality. Heavy deliveries of asparagus have not, so far, had a really downward effect on values owing to the eagerness of canners.

POULTRY.

No insufficiency can be complained of at the present time, as the local market is flooded with receipts. Under the strain of temporary over-supply, prices have fallen off considerably. Fryers and broilers are down 5c, while young roosters have declined to 30c flat. Turkeys, geese, ducks and Belgian hares are not in any real demand. Squabs remain in good favor at last week's quotations. Turkeys, live, lb.....20@22c do, dressed, large, lb.....22@23c Broilers, 1 1/2 to 2 lbs.....22@23c do, under 1 lb.....22@23c do, 1 1/4 lbs.....23@24c Fryers.....23@30c Hens, extra, per lb., colored.....21@25c Small leghorn.....17@18c Smooth young roosters, per lb. BUTTER.

While quotations of extra remained stationary all the week, a weaker feeling developed among dealers on Wednesday. This was due to some apprehension lest the home market would be unable to absorb comfortably the heavy receipts. Considerable shipping has been done of late to New York; but that great center is now quoting at only 4 1/2 cents above San Francisco prices. This renders the exportation thither from San Francisco too hazardous, as the leeway between the two markets is insufficient. Unless some other avenue for export opens, there is a strong probability of a break in the market.

*Registration Day.

EGGS.

Values of extras keep very firm and unyielding, due to the fact that the shippers' demand is taking care of receipts, and also to the fact that some dealers are putting stocks in storage even at the present high ruling prices. Pullets have displayed a tendency to fluctuate during the week, see-sawing between 28 and 29 1/2 cents for extra pullets, while extra firsts ranged from 27 1/2 to 28 cents, on Wednesday.

CHEESE.

Values of Y. A's declined on Saturday, but remained firm after that date, owing to a brisk business doing on shipments

eastwards and to the Orient of both Y. A's and California flats. Prices of flats firmed up a cent. Jacks are quoted at 18 to 24 cents.

Y. A's.....23 1/2c Fancy Calif. Flats, per lb.....23c Monterey cheese.....18@24c

DECIDUOUS FRUITS.

Bellflower apples are practically off of the market, and Newtowns are a negligible quantity at \$2.00 to \$2.50 per box. Cherries are moving in more freely, though they are none too plentiful. Peaches and apricots have increased in volume enough to be materially lower in value. Figs have cheapened to \$1.00 to \$1.50, due to the influx from the Imperial Valley country.

Apples: Newtown, fancy.....\$2.00@2.50 do, ordinary.....1.25@1.40 Cherries, bulk, per lb.....5@10c Royal Anne, per lb.....8@10c Apricots, per crate.....\$1.25@1.75 Peaches, per crate.....1.50@2.00 Figs, per box.....1.00@1.50

CITRUS FRUITS.

Valencias have commenced to arrive, and the small stocks now on the market rule from \$2.75 to \$3.00. Navels are nearly out and excite little interest, now that berries and other deciduous fruits are available. Lemons, lemons and grapefruit have advanced considerably owing to short supplies.

Oranges: Valencias.....\$2.75@3.00 Navels, fancy, per box.....2.75@3.25 do, Choice.....2.25@2.35 Tangerines.....1.75@2.25 Lemons: Fancy, per box.....\$3.65@4.00 Choice.....3.00@3.75 Standard.....1.50@2.25 Lemonettes.....2.00@2.25 Grapefruit, fancy.....3.00@3.25

DRIED FRUITS.

There is no heavy trading as yet in dried fruits, and the volume of the new crop is being felt out by the trade. Black figs of the 1916 crop are quoted at 8 cents. This season's peaches have advanced a cent. (Net to growers, bulk basis, f. o. b. shipping point.)

Apples, new crop.....9@9 1/2c Apricots, per lb.....16 1/2@16 3/4c Figs, black, 1916.....8c do, 1917.....5 1/2@6 1/2c do, white, 1917.....6@6 1/2c Callimyrna, 1917.....9@10c Prunes, 4-size basis, 1917.....6 1/2@7 1/4c Prunes, 1916.....8 1/4@9c Pears.....8@10c Peaches, 1917.....8 1/2@9 1/2c

BERRIES.

Deliveries are now large enough but less plentiful owing to cool weather. Strawberries find a ready sale at ruling prices of \$5 to \$6 per chest for all varieties save Longworths. Blackberries, raspberries and loganberries have cheapened because of greater supply, while gooseberries have advanced a cent.

Special Citrus Market Report

Los Angeles, June 5, 1917.

Shipments of citrus fruits from Southern California from November 1 to June 3: Oranges, 27,153 cars; lemons, 4,824 cars. Same time last year: Oranges, 22,235 cars; lemons, 3,952 cars.

Shipments from Central California from November 1 to June 3: Oranges, 4,094 cars; lemons, 164 cars. Same time last year: Oranges, 5,348 cars; lemons, 140 cars.

There has been a notable improvement in this market the past week. As the navels are being cleaned up and the valencias are moving slowly to market as yet, the Eastern markets took on a decidedly stronger tone and the demand was reported good at most of the Eastern trade centers. Lemons are also reported higher in the East and demand fairly good, notwithstanding the backwardness of the weather. Locally the orange market showed a little more strength in sympathy with the Eastern markets, though prices were only ad-

vanced in special instances. The abundance of berries and other fruits hurt the local sale of oranges. Grape fruit continues slow sale at old prices and lemons are as dull as ever.

AUCTION SALES.

New York, June 4.—Forty-three cars of oranges and three cars of lemons sold. Market on oranges 25c higher. Lemons also higher. Weather fair. Corresponding date last season 27 cars of oranges and one car of lemons sold. Market strong on both oranges and lemons. California navels averaged \$2.75@4.05. Lemons averaged \$2.35@4.15.

Boston, June 4.—Twenty-six cars sold. Market is stronger and higher on both oranges and lemons. California navels averaged \$2.70@3.70. Lemons averaged \$2.65@4.00.

Philadelphia, June 4.—California navels averaged \$1.70@3.50. Lemons averaged \$3.20@4.00.

PEACHES AND APRICOTS IN SOUTHERN CALIFORNIA.

The season is sufficiently advanced to form a fairly definite idea as to the outcome of the peach and apricot crop in Southern California. The crop is somewhat spotted, but the yield promises to be much better than awhile back, and the fruit, it is said, will be of fine quality. Horticultural Commissioner William Wood of Los Angeles county reports a full crop of peaches of good quality. Apricots are spotted, but up in the foothills and in a good many other orchards the yield will be heavy and the total promises a full 75 per cent yield. Horticultural Commissioner C. W. Bears of Santa Barbara county says peaches and apricots never promised better, and he looks for a full yield of both, the outlook now being for a 100 per cent crop. Roy K. Bishop, Horticultural Commissioner of Orange county, says that peach trees are heavily loaded with fruit and there is no disease. Apricots are a heavy crop and in excellent condition, the trees being healthy. In Riverside county the outlook is not so promising. D. D. Sharp, Horticultural Commissioner, estimates the yield of apricots at only 55 per cent and peaches 79 per cent.

LOS ANGELES.

Los Angeles, June 5, 1917.

BUTTER.

*Receipts of week ending June 5.....268,330
Receipts of same week last year.....341,180

*Tuesday's receipts short.

Under continued good receipts, sufficient and more than enough for home consumption, and, there being no shipping demand, the market worked a little lower the past week. While the production here on the coast shows no increase, the yield in the Central West is picking up and the Chicago market has broken 3c on extras since a week ago, and New York is 2c off. Stocks of butter here in cold storage, May 31, 1917, were 54,946 pounds heavier than a year ago and gained 14,159 pounds from the week before, showing that the arrivals were slightly in excess of home requirements. San Francisco remained steady throughout the week at 36 1/2c for extras under a steady demand from the East and Northwest.

We quote: California extra creamery.....37c Prime first.....36c First.....35c

EGGS.

Receipts (railroads) for week ending June 5, 1917, 1,987 cases.
Receipts (railroads) for week ending June 5, 1916, 2,733 cases.

Receipts continue to run lighter than a year ago and with a falling off in the production, and the consuming demand holding up fairly well, and some shipping movement, the market was firm and worked a little higher during the week. Trading on call, however, during the week was light, the high prices checking speculation. In Chicago, under heavier receipts, the market there broke 1/4c lower, while New York reported no change. Stocks in cold storage here, May 31, 1917, were 17,944 cases heavier than the same date last year, and there were taken into cold storage for the week ending May 31, 1,636 cases against 1,285 cases the same week last year, showing that more eggs are going into cold storage this year than last, though prices are 9c higher now than then.

VEGETABLES.

Market less freely supplied than the week before and prices in many instances are higher. The low prices also attracted some shipping demand. Cabbage continues to come in freely and sold slowly at last week's decline. New potatoes in good demand at old prices. Asparagus slow sale and weak. Onions coming in freely and slow sale and lower. Cucumbers and tomatoes in very good supply and lower. Peas and beans coming in less freely and are up a little. Some green corn was in during the week and sold in a fair way. Asparagus, lb., local and northern.....7@8c New potatoes, per lb.....3@3 1/2c Peas, per lb.....5@6c New onions, silver skins and Bermuda, per crate.....\$1.40@1.50 String beans, wax, per lb.....5@6 1/2c do, Kentucky Wonders, per lb.....5@6 1/2c Summer squash, per crate of four baskets.....50@75c Imperial tomatoes, 4-bkt crate.....\$1.50@1.60 Cucumbers, per box of 2 1/2 to 3 dozen.....75c@1.10 Green corn, lug.....75c@1.00

BEANS.

The market continues very quiet. There was some little buying of seed by the country and prices were held steady. The trade, however, wanted no beans and prices were held up solely by the light stocks.

We quote from growers:

Large white.....18c Small white.....17c Pinks.....16c Blackeyes.....10 1/2@11c

HAY.

The market has quieted down again and it is lower all round. Receipts, while only fair yet, were more than sufficient to supply the light demand. Buyers holding back and only taking such lots as needed for their immediate wants, hoping for a lower market. Alfalfa and grain hay both selling very slowly and clearances were hard to make.

We quote f. o. b. Los Angeles, old crop: Barley hay, ton.....\$19.00@21.00 Oat hay, ton.....20.00@22.00 Alfalfa, northern, per ton.....17.00@18.00 Alfalfa, local, ton.....19.00@20.00 Straw, ton.....11.00@12.00

FRUITS.

There is little new to note in this market the past week. The only addition to the offerings was a few small peaches, the first of the season. They sold in a fair way as a novelty at \$1.50 per lug. Cherries coming in more freely and the quality of the offerings was better. Demand very good, though they sold a little lower. Logans, too, are off a little, but in very fair demand. Apricots remained steady and sold fairly well. Figs were lower and sales rather slow.

We quote from growers:

Avocados, per doz.....\$4.00@5.00 Loquats, per lb.....4@7c Cherries, black Tartarians, per lb.....9@12c Royal Ann.....5@7c Soft White, per lb.....5@7c Gooseberries, per lb.....7@8c Apricots, per 4-basket crate, as to pack.....\$1.20@1.50

Figs, Imperial Valley, 7-lb. box. \$1.25@1.50
Peaches, lug\$1.50

BERRIES.

The feature of this market the past week was the marked increase in the receipts of raspberries, loganberries and blackberries, and they are all sharply lower and sales slow. Strawberries were in lighter supply and higher; demand fair. The cold, backward weather being against their ripening and there was a fair shipping demand.

We quote from growers:

Strawberries—
Poor to choice, 30-basket crate\$1.00@1.20
Fancy, 30-basket crate1.30@1.40
Blackberries, 30-basket crate1.50@1.75
Raspberries, 30-basket crate1.10@1.20
Loganberries, per case1.00@1.10

MELONS.

Cantaloupes from the Imperial Valley were in fair supply during the week. Daily express receipts being had. Market lower and demand fairly good at the decline.

POULTRY.

There was a further improvement in this market the past week. The high prices of butcher meats and the light difference in the price of them and poultry, causing a better demand for all fowls.

We quote from growers:

Broilers, 1½ to 2 lbs.23@24c
Fryers, 2½ to 3 lbs.24c
Hens over 4 lbs.20@21c
Hens under 4 lbs.14@15c
Ducks17@18c
Geese15c
Roosters, 3 lbs. up (soft bones)25c
Turkeys, heavy, 12 lbs. and up.29@30c
Turkeys, light24@25c
Squabs, live, per doz.\$1.50@3.00
Dressed3.75@4.85

HONEY AND BEESWAX.

A number of bright days the early part of the past week caused bees to store quite a little honey and fair extracting was reported. The orange honey crop has been made and is less than half a crop. The yield of sage honey will be a little larger, while alfalfa, which is an irrigation proposition, will be still larger.

We quote from growers:

White orange, extracted, per lb.13½c
White sage, extracted, per lb.12c
Light amber sage, extracted, per lb.9c
Light amber alfalfa, extracted, lb.8½c
Beeswax, per lb.32½c

Special Livestock Report.

San Francisco, June 6, 1917.

CATTLE.—The demand for killers, especially of the better class, is active. Live calves are firmer and quoted at a slight advance.

Hogs20c

Los Angeles, June 5, 1917.

CATTLE.—There was an easier tone to the market the past week. A falling off in the demand for beef and more willingness on the part of many feeders to sell caused a decline of 50c per cwt. on all beef cattle, and even at this reduction killers were not especially urgent buyers. This brings this market down in line with San Francisco's.

Per cwt. f. o. b. Los Angeles:
Beef steers, 1000 to 1100 lbs.\$8.50@9.00
Prime cows and heifers7.00@7.50
Good cows and heifers6.50@7.00
Calves, per cwt.8.00@9.00

HOGS.—There is no change to note in the hog market from a week ago. Not many in and not many wanted. What are arriving being mainly light half fat hogs, but few really good grain-fed hogs coming in, and they continue to command a premium. A falling off in the demand for fresh pork. California continues to furnish what hogs are coming in, the high markets East drawing Idaho and Arizona hogs East.

Per cwt. f. o. b. Los Angeles:
Heavy, averaging 250@300 lbs.\$12.00@12.50
Mixed, 200@250 lbs.13.00@14.00
Light, 175@200 lbs.13.00@14.00

Rough docked 20 pounds, piggy sows 40 pounds and stags 40 per cent.

SHEEP.—A fair demand and rather steady market was had the past week both for sheep and lambs. The offerings, while fairly good, were not suf-

ficient to break prices. Killers were all in the market and wanted a few sheep and lambs.

Per cwt. f. o. b. Los Angeles:

Prime wethers\$ 9.00@10.00
Prime ewes9.50@10.00
Yearlings10.50@11.00
Lambs13.00@14.00

Uni-Lectric
GASOLINE-ELECTRIC UNIT
LIGHTING SYSTEM

Electric Light for Your Farm

Uni-Lectric lighting plant generates standard 110-volt direct current; operates from one to fifty lights, electric motor, electric iron, vacuum cleaner, electric toaster, force pump, churn, washing machine, etc. No Batteries—No Switchboard—and a better machine for less money. High speed gasoline motor, generator and automatic governor, all complete in one small, compact unit. Uses standard lamps and fixtures. Simple, easily installed, dependable, economical. Costs less than other systems to buy and to operate.

Write to-day for full description and low price.

SAVE PAINT DOLLARS

WE CUT YOUR PAINT BILL IN HALF

Do not buy paint until you have seen Color Samples and Prices of our Durable Guaranteed Paint

Get our prices and you will save paint dollars. Buying our paint is like putting money in the bank.

It not only pays good interest, but it will improve your property, both the rental and selling value. Whether your paint requirements are small or large, write to-day for our "Direct From Factory to You" Catalog. It tells how to paint, the amount of paint you will need, the kind of paint to buy, the price you should pay. It tells about Brushes, Varnishes, Varnish Stains, Auto and other Enamels, Wall Tints and Finishes, Roofing, etc.

Write to-day for Paint Catalog—a post card will bring it.

General Paint & Varnish Co. 112 Market Street, San Francisco, Cal.

FRICITION!

That's what happens when the spindle and sleeves rub together—due to the microscopic roughness on all metal surfaces. But the powdered mica in Mica Axle Grease fills up this invisible roughness—makes a far smoother, cooler bearing, and the grease lasts twice as long.

Purebred Sheep on Range Successfully Handled

[Written for Pacific Rural Press.]

HE 100 purebred Shropshire bucks I bought from Mechams last fall got the finest bunch of lambs I've had for ten years," said J. R. Garnett of Glenn county, when asked what he had done with them.

They were bought last July and put on a 15,000-acre range with 5,000 Merino Shropshire ewes. Usually the Garnetts sell all their lambs and buy ewes to replace those unlikely to be profitable the next season. But this year they are saving all of the female lambs on account of their quality. The bucks are to be kept on the range another year, then sold in small lots to people with smaller bands. After two seasons, the bucks are too worn out for use on big bands. The third year old bucks are not likely to cover so many ewes, but go off by themselves, especially if young bucks are put in.

This year's lambs were equalled or surpassed only by the lambs of ten years ago, when the Garnetts had almost purebred Shropshire ewes and the best bucks they could get from Glide and Bowers. The crossing for Merino blood in the ewes since then has been due to the higher price they get for wool on account of the Merino blood. The lambs are high priced anyway. Wool used to be cheap; hence the effort to get a better grade.

Early January lambs have been raised, but there was too much loss due to storms to suit the range sheepman, so now the Garnetts

breed to begin lambing in February. The 15,000 acres is all fenced and cross-fenced into fields of varying sizes, according to the lay of the land. Basque herders are satisfactory, and two or three men ride the boundaries.

COYOTES POISONED.

"We have had a good deal of trouble with coyotes and have tried half a dozen ways to poison them," says Mr. Garnett. "The best we have found is about like this: With a round stick and a flat one mix balls of lard and sugar about the size of a walnut, never touching the balls with human hands. With the round stick, punch a hole in the ball and insert a capsule

containing 2½ grains of powdered strychnine. The capsule is picked up with the greasy end of the round stick, to which it adheres. Smear over the hole and put each ball, by means of the sticks, into a little waxed paper sack. Whenever a coyote is heard, just untwist a sack and dump the ball, without touching it, into a trail in that neighborhood. When you find a carcass, put a poisoned ball in a trail about fifty feet each of two directions from the carcass, putting one on the side whence the animal is likely to come. Dead coyotes have been found, though nine out of ten will

go to a hole to die.

FEED, SALT, AND WATER.

Each field runs to water. Salt is given once a week, generally in troughs which have to be moved in wet weather on account of mud. Sometimes it is fed in piles on the ground six or eight feet apart to give room for sheep around each pile. "I never knew of a sheep overeating salt," says Mr. Garnett.

Last season was a hard one. There seemed enough moisture on the Garnett ranch, but cold weather held back the growth so the short feed for the sheep did not profit by the late rains. Foxtail, which makes fine feed until the beards develop, sprouted in the early rains but died down in mid-winter, so that it did not get far enough on the late rains to get into the wool, which was sheared about May 1.

Foxtail heads softened and seeds swelled by fall rains make excellent sheep feed, so much so

that the Garnett bands came through the winter in good shape without extra feeding, though many other sheepmen hauled hay as much as twenty-five miles. Good foxtail is valuable if it does not ripen before shearing.

POISON WEEDS.

The common saying that sheep found dead of poisoned weeds were the best in the flock has some basis in fact, thinks Mr. Garnett. Greedy sheep eat poison weeds and all, while careful sheep spit them out. Greedy sheep are the largest and fattest because they are more active and eat most.

(Continued on page 733.)

The above is a splendid specimen of the mutton type of sheep. This wether took the championship honors as a lamb at the P.-P. I. E. in 1915.

HOW CALIFORNIA WAS DIVERTED.

IT IS really surprising that so many tiddleywink and two-for-a-nickel propositions for war service could command even momentary attention in a State born and reared for great things as California was. When the Macedonian-cry came from the entente allies to send men, money and food for the world's deliverance from tyranny most California exhorters broke forth into famine-fending, which might have been reasonable enough if San Francisco bay had been full of submarines and Hindenburg had drawn his line along the crests of the Sierra Nevada. Under such a menace, backyard gardening, child labor, menu-mending destructive of appetite and reductive of working force, might be reasonable because unavoidable. But all these things, which came first by patriotic impulsion, had no relation at all to the answer of the allies' appeal because they were related to starvation-fighting at home and not to bounty-spreading abroad. At the moment what seems to be the result of this hysterical propaganda is disclosing itself in several ways: the intrusion of a chance of local over-production of boosted products, which darkens the commercial outlook to such an extent that no one can calculate future values and therefore will not enter upon contracts: the danger that this condition may depress values unduly because anticipated amateur production may fail to arrive; the chance that amateur producers may either lose money through consuming food which has either cost them more than it is worth or may later have to add the cost of new purchases to that which they have lost through their failure at production. Of course, some new conditions may appear later, but just at this moment it seems probable that exhortations to amateur production have seriously endangered the farmer's chance of handling his crops of potatoes and onions at a fair profit and at the same time have assured the consumer no trustworthy substitute for the farmer's effort and investment in production.

MISFIT LABOR PHILOSOPHY.

IT IS largely this mistaken agitation for starvation-fighting by backyard farming and for wild-cat farming by amateurs who knew not what they did, which is also to be blamed for the new inrush of the political push into the farm-labor situation. If California's real duty, to produce large surpluses of imperishable and transportable food products just as soon as possible, had not been obscured by the altogether foolish and unnecessary exhortation for starvation-prevention, we probably would not have heard the outcry for child labor and hobo reclamation as substitutes for the capable and dependable labor which the producer must have to get his product. It was very interesting, and rather sad also, to listen to the declarations of the various State and National commissioners and organized labor magnates concerning the labor which the California farmer needs and the only labor they proposed to allow him to have. It was interesting because all these

farm-labor doctors diagnosed the California farmers' problems from their observation of farming in the Eastern States and in Ireland in the days of their far-away youth. There was a cosy lot of philanthropy and humanity in their prescription, of course, but it had no more relation to the present problem of doing the State's duty in feeding distressed Europe than a backyard potato patch has to a California farm which grows a shipload of grain or a trainload of beans. It is possible that in fifty years or more from now California may be subdivided into a million small farms, independent by mixed husbandry and largely feeding a resident farming population of twenty millions, as owners and helpers, by the labor products thereof, as may be in old-settled and largely populated countries. And in that distant day there may be policies, methods and purposes which are wholly impracticable of pursuit at this time. To recall impressions of some other thickly settled country and to dream dreams of what California may be two generations hence, and, on the basis of such memory and dream, to declare what California farmers must now do to save the world, is simply to insult the intelligence and impeach the devotion of the men whom the country is calling to do their best work to win the war. Really these local statesmen and social economists who are so free to declare on all occasions that there are boys and girls and idle town-people enough to handle California's war-time production of surplus foods, should be muzzled in the interest of the country's safety. They are giving aid and comfort to the enemy by reducing the food-producing capacity of this State. We shall not be surprised at all if it should appear to these parties later that they have already had rather more than desirable to say about what the farmers should have and do.

A CALIFORNIA-SIZED PLAN.

FROM the gloom of small things it is really very comforting to hear of a possible undertaking which may embody the California spirit and quality of getting somewhere. We hear that the College of Agriculture at Berkeley is considering plans for a broad promotion of wheat growing in this State for the crop of 1918 and for making a most concrete and practical contribution of knowledge thereto. How the college staff will attack this subject, or, in fact, whether they will attack it at all or not, we do not know—but we desire to discourse a little upon the proposition because it strikes us as exactly the kind of thing which California should undertake in discharge of her patriotic duty to the world and because it appeals to us as a thing safest to do, on the basis of assured value of product, and a thing with which California can unquestionably come through. Of course, everybody knows that the sad condition we are now in (that is, producing in 1916 only 5.6 million bushels of wheat and buying about the same amount from other American States for our own eating) is not due to any lack we have in capacity for growing wheat. California's wheat product has been eight times her present output. It was 44 million bushels thirty years ago and 45 million bushels twenty years ago. Nor was California's capacity for wheat sacrificed to her passion for barley. In 1896, when she made 45 million bushels of wheat, she also put out over 38 million bushels of barley and her greatest barley crop was but 46½ million bushels in 1910. Therefore, California lost seven-eighths of her wheat crop and only gained about one-fifth in barley and has since lost that because the barley output in 1916 was the same as barley in 1906. But if it should be claimed that California cannot return to her eminence in wheat because the land has gone out of cereal service into fruit, alfalfa, beets and what not, the fact remains otherwise, as the current acreage in barley shows. And though all barley land is not available for wheat, and though we could not afford to use it all for wheat if we could, there is much land recently in barley which should go to wheat because barley is not widely available as a bread grain and because "strictly limited" is being stamped on the world's beer. If, then, wheat should borrow considerable land from barley and if wheat should go on much alfalfa land of in-

ferior stand and as the sound science of rotation demands, we would have land enough for as much wheat as we ever grew in this State, and if wisely grown and if some of the alfalfa water were given to the land after breaking up this summer, we would get acre-yields of wheat in many cases which would match the traditions of the pioneers.

WHY WE SHOULD DRIVE ON WHEAT.

BUT THERE are other considerations which should move land owners to wheat just at this time. There is probably no crop so sure of money and so well within reach. We had no such per-acreage of tractors when our great wheat crops were grown as now. If we have lost combined harvester and header and thresher capacity it can be easily recouped. It will be a movement which will lessen the demand for man-power instead of multiplying it, as nearly all recent exhortations for new crops do, and will thus largely side-step the labor problems—for a man can easily divide his own bath tub and his morning paper with his tractor chauffeur, while his crew of mule-skinner and roustabouts will usually find quarters quite to their liking on the larger grain farms.

But the chief consideration at the moment is the great war service which California can render next year in increasing the white-bread timber which the world now most needs and will need for some time even if peace should quickly befall. The State will first assure its own supply of bread free from debasement and set free the present requirements from other States. Beyond that it may contribute many times as much to the world's general supply. And while doing that it will advance its own farming knowledge and resources, for to get more high-priced wheat better farming must be done and this means freer investment in fertilizers and in high-class farm machinery and the use of water in addition to better work for rainfall conservation. And all this effort and enterprise will make safer and more profitable all other kinds of farming we are doing and thus help a State which helps the world.

SHEEP AND WOOL REVIVAL.

RUNNING along this trench reminds us of another revival of California's historic greatness which should not be lost sight of in the crush of small things which are being impressed upon California farming. It is the revival of our sheep and wool industry, in the line of which many suggestive things may be found on other pages of this issue. Bad as the current war is, it must be credited with saving two of our great industries from strangulation by free-trade politics. One is the beet-sugar industry, which is now speeding along unexpectedly and may advance for a generation, because such a sugar consumer as the United States should have its home supply adequate and permanent, and the fact will be better appreciated in the future than in the past. The other activity which was narrowly rescued from collapse was the wool industry. The growing industry was being punished severely for the transgressions of its wicked partner, the manufacturing interest, and all that the California growers could do under the intelligent leadership of Mr. Ellinwood to get a tariff which would be fair to grower and to consumer of woollens would have availed nothing if the war had not furnished growers far more protection than they needed under ordinary conditions. And wool is another essential product which this great country should not seek abroad. The reformers used to scout the claim that the United States would suffer in case of war if it did not provide for its own supply and even the proponents did not look very scared when they urged the fear of war, for they had not much faith in it except for the sake of argument. But war came just in time to avert the knife-hand of free trade from reaching a vital part and now we have every chance of re-establishing our wool industry with such protection as a scientific, and not a political, adjustment of the relation of things shall demonstrate to be reasonable. And under such a blue sky we shall have a growth of our sheep industry not alone upon the exceptional fine-wool resources of California ranges but with the added mutton resources

of our farms and feed lots. To the rich and characteristic services of the sheep in California farming policies, as set forth by other writers on other pages of this issue, all readers should give attention. Since the dawn of history no animal has given the human race so much for so little as has the sheep, and no animal has more richly rewarded the efforts of breeders who have ex-

ended time and money to help the sheep to adapt itself to various lines of usefulness. And now comes the opportunity for all farmers who will handle the sheep decently and protect it from its foes, all the way from mange-mites to mangy dogs, to profit by wise investment in bands of sheep for farm uses and for product-sale, as conditions may favor.

QUERIES AND REPLIES

Inquirer Must
Give Full Name
and Address

What About Planting Imperials?

To the Editor: Kindly give advice concerning planting Imperial prunes. We have fifteen acres of exceptionally good bench land, gravelly loam, 3 to 6 feet, heavier gravel and less loam as you go deeper. The location is less subject to frost than most of the land here, but we will have to consider frost to an uncertain extent. I would like to know the nature, habit, productiveness, life, and best root stock for Imperial prunes, also market possibilities, past, present and future.—E. R. H., Kelseyville.

We are not keen about advising to plant Imperials. If a man has the variety doing profitably, he needs no advice to plant more. In an untried situation such advice is dangerous, for the Imperial is a shy bearer in most places. So far as we know, it is not more subject to frost than other prunes. Your chief question is how any prune will do on your gravelly soil over a gravel bed. Many trees go back on such a foundation, even in river bottom, and may go sooner on a dry bench, even though there may be a heavy rainfall. Unless you have tested out the matter with other fruit trees, we should be shy about it—unless perhaps we had water for one or two mid-summer irrigations. On such a soil the commonly-used myrobalan is doubtful: either peach or almond are safer. Imperials sell well when you get them, in a place where so large and late a prune can be sure of dry weather enough to cure well.

The Squash Bug.

To the Editor: I have quite a field of pumpkins which are up finely, just beginning to vine. I find they are alive with the large squash or pumpkin bug. Is there anything known in the way of a spray (wet or dry) that will rid the plants of them? I have tried spraying with dry Paris green, but it seemed to do no good. The field is too large to hand pick them.—Grower, Chico.

Paris green will not injure squash bugs because they suck juices and do not eat the leaf surface on which the poison is spread. The young insects can be killed by spraying with kerosene emulsion, but the old ones are hard to get by any process except hand-picking and smashing. One should always be on the lookout for this pest of the melon family and pounce quickly on the first appearance and stamp out the trouble by hand-picking. Various growers have reported some success with a spray of creolin (a tablespoonful to a gallon of water) also with powdering the vine and nearby ground with tobacco dust, also with a powder made by stirring enough kerosene oil into air-slaked lime to give it a good stiff smell of the oil. Unless one starts in very early the cost of treatment is apt to be more than the crop is worth. Fortunately the injury by the pest is generally limited.

Cover Crop for Orchard.

To the Editor: In sowing a cover crop in the orchard and vineyard is it necessary to have the soil from different parts of the field analyzed to ascertain what would best be suited? Would you advise using a fertilizer when the seed is sown to bring a heavier growth? Of the various cover crops suggested, which would produce best results, rye, barley, vetch or mellilotus indica? Would a combination of any of the two produce any better results than either one of them alone?—A. C. I., Stockton.

It is not necessary to have analyses made for the purpose you describe. It is a good idea to push growth of a cover crop, if its growth is scant, by scattering a soluble complete fertilizer on the crop after it has started; or, if it does not need pushing, apply just before plowing under.

In this case, of course, the fertilizer is for the good of the trees. If you wish to get winter feed for stock, it is desirable to sow rye or barley with bur clover or vetch, but if you have no desire for feed sow either bur clover or vetch alone or both together, and let them lie down as flat as they like, for it is easier to plow them under. Mellilotus indica is not desirable for feed, but it is a good cover crop. We should sow that alone. All these should be sown as soon as the ground is wet down well in the fall.

Submarine Attack on Spuds.

To the Editor: I have potatoes, planted March 8, which have been cultivated several times and watered once. Some of the vines are yellowing and some of the tubers are rotten. In such cases the tap root is always cut under the yellow top and you can always find a little yellow worm either in the root or in the tuber. How can I get rid of the pest and would it be safe to save the sound tubers for seed?—H. L., Lakeside.

Why did you not send us a worm so we could see what is getting into you? Catch a worm, drop him in a homeopathic vial of alcohol: bore a hole in a little block, put in the vial and mail with your statement about it. There are so many "worms" and they have such different habits that the word worm does not mean much that is definite to us. Presumably you have wireworms, and in that case they will soon leave the potatoes and the sound spuds will be safe for seed when properly mature and prepared for planting by exposure to the light in a screened place, where the moth cannot get at them to produce another kind of a worm which will work all summer.

Fertilizing Tomatoes.

To the Editor: What kind of commercial fertilizer is best for tomatoes and how should it be applied? The soil is sandy loam.—M. D. J., Ontario.

You must be careful not to use either water or fertilizer in excess in tomato growing, for the result will probably be very large plants, casting blossoms and very little fruit. But on such soil as you describe water enough should be used to get slow, continuous growth and good color of foliage; on a richer, more retentive soil neither water nor fertilizers may be necessary. It would usually be advisable to use 500 pounds of complete fertilizer per acre on a medium soil and even twice as much on a poor soil might not be too stimulating. The fertilizer may be placed near the plant if scattered well, but should not be bunched on the roots. It can either be scattered on the soil before irrigation or on the moist soil afterwards and cultivated in. The latter is the better way on a soil which takes water very freely.

Apricots Still Going Off.

To the Editor: What is the matter with my two-year-old apricot trees, which are dying. They seem to have a disease resembling "fire blight" of the pear. The leaves wither and fall off, and the sun does the rest to the naked limbs. There is also a few black bugs or beetles, with red spots on their wings, working on the new growth.—New Subscriber, Arbuckle.

This seems to be a late manifestation of the injury called "sour sap in the top," of which Prof. R. E. Smith gave a description in the Rural Press of April 21—caused by a drop in temperature after the sap rose. Such injury to the trunk or main branches may sometimes reveal itself quite late. Treatment is cutting back to good growth wherever it breaks out, and if none appears the injury is too severe for recovery. You can spray the exposed wood with whitewash and watch for a new

start. The insects you mention have no connection with the trouble and unless you can see that the leaves object to their presence you need not.

When to Use Nitrate.

To the Editor: I have a 60-acre patch of dwarf milo on sandy loam soil—old grain land which had been idle for about four years—and partly covered with "telephone" weeds. I plowed in the winter, about 12 inches deep, breaking up a plow pan and bringing up a lot of reddish soil which had never before seen the light of day. The ground was twice harrowed and all sowed to milo before April 12. I have harrowed once since it came up and howed weeds twice. I plan to cultivate it once more and let it go. I shall plow shallow and seed to barley in the fall. Would you advise applying nitrate of soda on this ground at that time? How much and how should it be applied?—H. T., Merced.

We would not use nitrate in advance of the whole season's rainfall or a plant will be growing the following spring. If you were sowing for winter pasturage, it would be different. If you are sowing for grain or hay, scatter 200 pounds of nitrate on the growing crop after the heavy rains are over—providing you are not getting a good strong growth without it.

Box Elder Bugs Not an Oak Pest.

To the Editor: I am mailing to you some bugs, which I find in large numbers around the ground under live oak trees and under brush piles. The caterpillars are eating all the leaves from the live oak trees and I think these are related to them in some way. Please give me their name and habits.—W. P. M., Calistoga.

The insects you send are the box elder plant-bug (*Leptocoris trivittatus*). They are slim bugs about half an inch long, dull black with red markings. They feed chiefly on the box elder tree, but sometimes take to jabbing ripe fruits. They have no connection with caterpillars eating oak leaves. The parents of these caterpillars are two or more kinds of moths, not hemipters, to which your specimens belong. They and their progeny cannot eat leaves because they are suckers, not biters.

Shriveling Peach Leaves.

To the Editor: The leaves on my peach trees seem to be shriveling. Some say it is because they were not sprayed last spring. Others suggest it may be some disease. The leaves are of a good color and the trees look healthy, other than the shriveling of the leaves.—C. J. A., Stockton.

If your leaves are simply shriveling, there is sour sap or they are short of moisture. If the leaves are swollen and distorted, the trouble is curl leaf—to be guarded against next year by spraying with lime-sulphur before the buds open.

Laws on Weed Growing.

To the Editor: Is there a law in this State prohibiting the raising of Johnson grass, the different kind of thistles, cocklebur, etc., and if so, what authority must be notified?—C. A., Richfield.

There are laws to prevent the growing of noxious plants in certain places whence their seeds may be distributed. The State Horticultural Commissioner is charged with the execution of these laws and inquiries should be addressed to him at Sacramento or submitted to your county horticultural commissioner, who will give information and advice.

New Potatoes for Seed.

To the Editor: Will new potatoes raised this spring make seed to plant for a fall crop?—G. O. B., Modesto.

Yes, if thoroughly matured as shown by the dying down of the top growth, and if the potatoes are afterwards exposed to the light sufficiently to green the skin and start the eyes. This should be done in a room with openings screened to exclude the potato moth.

California Weather Record

The following rainfall and temperature record is furnished the PACIFIC RURAL PRESS by the United States Department of Agriculture Weather Bureau at San Francisco for the week ending at 5 p. m., June 12, 1917:

Stations—	Rainfall Data.		Temperature	
	Past Week.	Seasonal To Date.	Normal To Date.	Max'm. Min'm.
Eureka	31.36	45.53	64	40
Red Bluff	19.25	24.81	100	64
Sacramento	12.95	26.06	92	48
San Francisco	16.78	22.22	81	46
San Jose	12.03	10.78	88	42
Fresno	7.25	9.68	100	52
San Luis Obispo	23.03	20.51	86	44
Los Angeles	15.24	15.62	80	50
San Diego	10.13	10.01	68	64

Drying and Curing Fruits

[R. Schmidt, Division of Pomology, University Farm, Davis, Cal.]

Deciduous fruits of all kinds, including grapes and figs, may be dried in the sun or by means of artificial heat in drying houses made for the purpose. Most of the drying in California is done in the sun. Certain fruits, such as apples, pears, peaches, apricots and Adriatic figs, become dark in color during the drying process and must be bleached in order to comply with the demands of the market. Bleaching is commonly done with sulphur fumes, which add nothing to quality but improve the appearance. Shallow wooden trays, light but strong and uniform in size, are best.

On the whole, the climate of California is quite favorable to the drying of fruits in the sun. However, in cool weather, in the coast region, or when early rains occur, some method of drying artificially may have to be resorted to. In such cases a cheap home-made drier will answer. Construct a small house of light lumber, or other material such as roofing paper, make it as nearly air-tight as possible and sufficiently large to hold about twelve trays so that one will slide in above the other, with an inch or so of air space between. Allow sufficient space under the bottom tray to place a small stove costing about \$2.50. This house may be used for sulphuring apricots, peaches, etc. This drier is only rec-

quantity of fruit to be handled. Trays for commercial drying are usually 3x8 feet, but any size will do for very small quantities, provided they are all alike. Pine shakes make a good and cheap bottom. These are 3 feet long, 6 inches wide and come in bundles of 25. Do not use redwood for light-colored fruit, as it will discolor the fruit. The sides and ends are pieces 1x2 inches, either pine or redwood. The shakes are nailed to the sides and the latter are nailed to the ends with long cement-covered nails. The bottom of the tray is strengthened by nailing on lengthwise three extra heavy laths, made especially for this purpose. One lath is put along either edge and one across the center from end to end. The center lath is clinched to the shakes. In the absence of trays, for a small amount of fruit, use boards laid side by side, canvas, or even paper, but these will not answer for covering or stacking the fruit in case of wet weather or for sulphuring.

APRICOT DRYING.

For the best results apricots should be picked off the tree, although shaking them off and allowing them to drop on a sheet is also practiced. They should be ripe but not over-ripe, i. e., soft. They must be halved and pitted, care being taken to make clean cuts and avoid tearing the skin or flesh. The pieces are placed on trays,

come the possibility of the fruit becoming too dry in very hot weather, the trays with apricots may be stacked before they are entirely dry and allowed to finish in the shade. This improves the quality of the fruit. If the dried apricots have become too dry, or look dirty, put them in a perforated can or wire basket and dip for a few seconds in boiling water. Allow them to dry a little on the surface and then put them away in sacks or boxes. The water softens and improves them and there is no danger in putting them away in that condition, provided the water was boiling when they were dipped.

BERRY DRYING.

Bush fruits, like blackberry, raspberry and loganberry, are often dried. Pick the fruit in the cool part of the

day. This will cause the berries to lose less juice and retain their shape better. Spread the berries evenly on the trays and do not move them when once placed. If the trays are too full, the fruit will become mushy. Where berries are handled commercially, artificial methods of drying are usually employed. When sufficiently dry, remove the berries during the warm part of the day, otherwise they will stick to the trays, and store in a clean, darkened room.

Fruit exports from the United States during 1915 were valued at \$34,229,906. The values of the principal fruits exported were: Apples (dried, green or ripe), \$11,358,124; apricots, dried, \$2,241,061; oranges, \$3,851,013.

Sulphur House (continued)

Plan of Sulphur House, showing details.

commended to finish fruit already partly dried, taken from the ground after being dampened by rains, or for small amounts of fruit.

A very cheap, light and quite satisfactory sulphur box may be made in the following manner: Make a framework of light wood, sufficiently large to enclose a stack of trays, and cover this with the building paper, making it nearly air tight. The box should be open at the bottom so it can be slipped over the trays when stacked and should be two or three inches larger than the stack in each direction. A piece of the frame may be extended near the bottom on each end to serve as handles. A hole may be made in the ground beneath the stack of trays into which the sulphur is placed, either on the ground or in some kind of plate or vessel. Light the sulphur by means of a match and paper or shavings partially covered by the sulphur.

The size of the drying trays it is advisable to use will depend upon the amount of help available and the

"cup" side up, and as closely together as possible, then put into the sulphur house or covered with the sulphur box. Beneath the trays in a hole in the ground or in an iron dish place two or three pounds of sulphur and then light. Make the box as airtight as possible. The time required to sulphur apricots, to give them a light color, varies with the condition of the fruit. It usually takes from two to three hours. The fruit should become a golden-yellow and should not turn brown.

Sulphuring also shortens the drying period and prevents rapid decomposition and infestation by insects. When the fruit is well sulphured the juices collect in the cup of the apricot and for this reason it is advisable to handle carefully on removing them from the sulphur-house, in order not to spill the juice, which would cause the fruit to stick to the trays.

Let the fruit remain on the trays in the sun until dry. Apricots are dry when they are leathery to the touch, not hard and brittle. To over-

Fumigating Tents

Full weight, specially woven material. Size of tents guaranteed. Workmanship of the best, and marking correct in every detail.

Here and There in the Fruit Business

[Written for Pacific Rural Press.]

High Budding vs. Sour Sap.

Budding of prune nursery stock eight to twelve inches above ground to help prevent the sour sap, which destroys a serious percentage of prune trees under four years old, has been practiced for three years by Miller & Gobbi of Sonoma county. Their customers have repeatedly come back for more of the high-budded stock, so much that their 10,000 trees last year were all ordered ahead of time and orders are already in for next spring's planting.

It is common observation that young prune trees may die from sour sap, but their myrobalan stocks may send up vigorous shoots. In the river bottom orchards and others water sometimes stands around the trees for awhile. Often dirt is banked up against their trunks. If the prune bud is above this water and dirt, thinks Mr. Miller, the damage is negligible.

Mendocino Fruit Crops.

Prunes in Mendocino county are 25 to 90 per cent of a normal crop, depending on soil and location which varied the condition of bloom during the rainy spells of last spring, according to Secretary C. A. Bernhard of the Ukiah Farmers' Club. Pears will be a good crop, with very little blight showing. People keep this disease severely cut out and it does not seem to spread so virulently as in many sections. Scab seems much less severe, perhaps due to timely spraying.

B. M. Bucknell, who bought 400 tons of prunes last year, estimates this year's crop throughout the valley at 75 per cent, due to rain and some slight frosts. He has paid 5 to 6½ cents base for what he has bought of the coming crop, and as he says they average 60's, that means \$130 per ton delivered in town at 6½ cents basis, which has been the average price.

Frame for Cherry Box Making.

For rapid cherry-box making have a heavy iron plate, unwarped, on a stiff bench. At the edge of this on

the side of the bench have spring clamps fastened vertically at just the right distance to hold the ends and center pieces vertical ready to nail the sides on. One side of each clamp is fixed. The other side may be a piece of spring steel flared at top and sides to admit the pieces easily. Under the clamps with a half inch clearance is a piece of railroad rail or other heavy, straight bar for the ends and center piece to rest on, while the side is being nailed. The first side is then turned to rest on the railroad iron, while the second side is nailed on with no trouble for spacing or getting a right angle at center other than shoving the pieces into the clamps. The bottomless box is then laid flat on the iron plate and the top nailed on, with no warping or jiggling. It is then ready to be packed.

Sonoma Prune Good Crop.

Sonoma county will have more prunes than last year, as surveyed by J. F. Miller of Miller & Gobbi, who operate nearly all over the county. Old trees, poorly cared for, have light crops, but young orchards are generally loaded. Cloverdale has a normal crop, which is about 300 tons, and Anderson Valley a big crop of about 200 tons. Windsor has a big crop, and Healdsburg well up to normal. Miller & Gobbi, who joined the Prune Growers' Association, are doubling the capacity of their plant to three cars per day, and will pack for the Association under contract at a trifle over a cent per pound.

Cherries Need Drainage.

Cherries in the Sebastopol district are about 50 per cent of a crop, as estimated by John F. Miller, who operates considerably in that district. Cherry crops are always spotted. Cherries planted on heavy bottom land with an oversupply of moisture make good growth, but usually fail to set a crop, says he. They want well-drained rolling locations, with lighter soil but not too dry.

Late Grape Irrigation and Water Berries.

[Written for Pacific Rural Press.]

J. A. Schlueter of Kerman picked 6,000 trays averaging 25 pounds green from eight and one-half acres of six-year Thompson Seedless vines set 10 by 12 feet apart. Frank Henry said last spring there would be 7,500 trays, of 20 pounds per tray. Mr. Schlueter was skeptical when we saw him at that time, but this fall at grape picking, although he has plenty of avoirdupois, he was nearly walking on air. He had never received half a ton of raisins per acre before, though he had manured the vineyard every year except last winter.

Irrigation was withheld under Mr. Henry's directions until June, after the grapes were well set. A four and one-half foot head of water was run down the rows. Backfurrows had been plowed down the centers, and the water was checked by little dams crosswise nearly to the rows.

The second irrigation, July 26, was a thorough soaking, contour checks

being made, to fit the lay of the land, some of them enclosing as many as eight rows 200 yards long in a check. Cross levees were shoveled as needed to spread the water thoroughly, and the water ran 55 hours for the eight and one-half acres.

The third irrigation was applied August 22 because digging down in the vineyard showed the need of it. The leaves had started to curl and lose their color and had not entirely recovered when we saw them, but were expected to revive after the fruit was off. In mid-September, moist dirt was easily found two inches under the surface. The water was applied from back furrows the same as the first irrigation. It took 40 hours. No waterberries or mildew developed. Mr. Schlueter intends hereafter to irrigate only when the vines are about to need it, not following the commonly practiced early irrigation, and not being at all afraid of late irrigation.

The French or Belgian Endive.

To the Editor: I just happened to be reading your paper of February 17, and I wish to clear up the doubt about this endive. Having grown it myself, here and in Belgium, I ought to be able to help the inquirer about it. He refers to what is called in the market "French endive"; at least that is the common name given to it in New York. It is altogether different from the real endive. Its true name is Witloof, meaning in Flemish "white leaf." Its seed is catalogued by New York seed dealers as "chicory witloof."

It is simply a wild chicory, improved for that purpose. So is the chicory which is used as an adulterant of coffee, the root being roasted and ground. In Belgium it is used in certain proportion with coffee. The plant produces both a good-sized coat and root. After growth is finished in the late summer these roots are dug up. A few weeks later they are forced in succession throughout the winter season until the spring vegetables appear. This forced growth is sold in eastern cities at from 18 to 30 cents a pound retail. In the well-to-do parts of the cities of the East you are mistaken when you say it is used by "hyphenates." Only rich Yankees eat it. They have traveled in Europe and there it is found in most all the large cities, shipped from Brussels in Brabant, Germany. It is shipped on every steamer leaving Antwerp, as much of it as 50,000 pounds a week. That was eight years ago.

It was originated in Brussels and is called in French "Chicoree de Bruseelles."

Some stores of Polk street, San Francisco, get it from an Eastern importer, and pay a good price for it. Because of it being a long while in transit, the outer leaves rot very often and it has to be recleaned

for sale. The dealer sells it at from 50 to 75 cents a pound. One San Francisco firm claimed to be the monopolist of it. They pay for it 15 cents a pound per 20-pound basket in the East.

I grew perfect good-sized specimens of it and they were willing to accept it, but would pay only when sold! Good night. You may imagine. I ate it myself.

They claimed it is not liked on the Coast, it being a little bitter, which, however, is its best quality. Its wholesomeness is recognized in Europe. It is the first vegetable prescribed to sick people. It is, as a rule, cooked in Brussels, but used as a salad in the East.

The enormous price at which it is sold here is the cause for it being little used. A Belgian of Calpella, Mendocino county, sent some to the exhibit at the Ferry building, San Francisco, where it is in the Mendocino County show case. I sent some to the Sacramento fair through the Placer County exhibit commissioner. It was a beautiful specimen, but it never got anywhere.

I have given the way it is grown. The way it is forced is another affair. It is easier here than in Belgium. There is no need of tying up at all to it, as the first leaves are not used except for cattle feeding. I will give in detail the process at another time. There are 50 villages around Brussels where it is grown and forced, and to show what profits are made on it, let me say this: The land is sometimes rented at up to \$160 an hectare, or about two and one-half acres, a year.

It is a great industry, and with the hot house grapes, are two typical cultures, which would astonish any horticulturist visiting Brabant. Of course, the real source of it is hidden by the name, French or Belgian.—Dominique Boquet, Redwood City.

Bean Varieties' Requirements.

[Written for Pacific Rural Press.]

Bean planting on the edge of the great inundated Sutter Basin commences in February with Garbanzos, whose acreage is negligible. Six or eight years ago Chas. Johnson, who has worked Tharp Bros.' 400-acre ranch many years, planted Lady Washingtons July 26. These were harvested in good shape in November. Last year, according to Supt. J. W. Cloyd of the Sutter Basin Co., planting continued until July 22; but that was too late on account of frost and early rains, for the crop requires 90 to 120 days to mature. Planting proceeds as the water recedes, for plowing can commence within 10 days after the water is off.

Early planting of whites, pinks, and reds, would bring them into bloom when the hot July and early August north winds would blast the blossoms—about once in four or five years according to L. N. Tabler, who had 1,280 acres last year. Blackeyes stand such weather better as observed by Mr. Johnson, and are therefore planted first, especially if light soil is available, though they require only 100 days to mature. The other varieties are planted all at about the same time. Whites wouldn't

return seed if planted late on poor land, for they like black soil. Low wet ground may usually be planted late to Lady Washingtons, which need 100 to 120 days, or to red kidneys, which need only 90 days. Some people, says Mr. Tabler, claim to have had Lady Washingtons mature in 80 days and red Mexicans in 70; but this may have been for lack of water.

Small whites or navy beans require a longer season than the large whites (Lady Washingtons) as noted by Mr. Tabler, while pinks and red Mexicans mature in a shorter season. The colored beans are more salable in a bad season because they do not show weather stains so badly.

DRAINAGE BOGGY LAND.

Last year Mr. Burns of Douglas County, Nevada, drained two acres of boggy land with 1,000 feet of five-inch tiling. It was put under cultivation and this year irrigation was necessary. "The main points," says Mr. Burns, "are to lay the pipe deep enough, which can be determined by digging until the water begins to bubble up similar to a spring; and to have enough fall to take the water off."

After the trench is dug to the required depth, the foot lengths of tile are placed in the bottom and covered with a little old hay or straw to prevent dirt from stopping up the cracks or suction points between the lengths, and the trench filled with dirt.

A main line is run through the piece to be drained and connected with feeders running out in different directions according to the size and shape of the field. Tile can be obtained at \$70 per thousand.

There are many acres of such land in Inyo County, Cal.

Sweet clover is adapted to a wider range of climatic conditions than any of the true clovers, and possibly alfalfa.

PLOWING SPEED

The faster the plow travels the better it breaks up the ground—tractor plowing is first aid to good crops.

Tractor plowing saves time, and saves money—often it saves the crop by getting it in in time.

Tractor plowing is deep, and turns up the new, fresh soil that makes for healthier growth and better yield.

Tractor plowing is done by business farmers who figure close and know what it costs to raise crops.

Write for the Yuba Ball Tread Tractor Catalogue, telling us how many acres in your farm.

Field and Garden Suggestions

[Written for Pacific Rural Press.]

Bean Straw for Feed and Fertilizer.

Two-thirds of the rations of all the dry and young stock on the dairy belonging to J. W. Scott of Keyes, Stanislaus county, has been bean straw during the past winter, and a nicer, healthier looking bunch of stock could not be asked for.

Mr. Scott grows some beans every year as a second crop on his open land and stacks the bean straw close to the cattle corral. This with the coarse stems of alfalfa that are left in the mangers by the fresh cows, supplemented with some corn silage fed in open troughs in the corrals, constituted the entire ration fed.

The coarser stems of the bean straw are not relished by the cattle, and all such material which is left in the racks is used by Mr. Scott for bedding in the large shed that he uses for shelter during the winter. This absorbs the liquid manure and at the same time keeps the floor fairly dry at all times, and when hauled out to the fields and plowed under adds materially to the fertilizing value of his manure.

During the present year Mr. Scott expects to still further improve the fertility of his land by sprinkling raw phosphate on his manure before it is taken to the manure pit on the theory

Nitrate for Weary Apples.

Prof. C. I. Lewis of the Oregon Experiment Station reports that extensive experiments conducted by that station have demonstrated that soils are deficient in nitrogen when the leaves become yellow and thin, the apples very small; the annual wood feeble, short, and willowy; the buds weakened; and the trees are afflicted with various functional diseases.

It has been demonstrated that the trees can be very quickly brought out of such a condition by using nitrate of soda, which is applied a month before the trees bloom. It is surprising to see how soon the trees can appropriate this food; blossoms become vigorous; the set of fruit doubled; frost damage much reduced; the yield of fruit increased sometimes even tenfold; the foliage thick, green and luxuriant; and there is a disappearance of the functional disorders.

To get the best results, five pounds of the fertilizer should be sown broadcast and harrowed in. Where soils are deficient in organic matter, under non-irrigated conditions, use cover crops. Where irrigation is practiced, grow a shade crop, as alfalfa or clover, among the trees. In many cases the nitrate need not be applied more than once in three or four years, depending upon the condition of the trees.

Heavy Barley and Silage Yields.

Thirty-three sacks of barley and 16 tons of silage to the acre in one season was the yield secured by C. D. Hayworth on seven acres of his sub-irrigated dairy ranch near Modesto last year on old alfalfa land.

Mr. Hayworth planted his barley early in the year of 1916, and after allowing it to ripen, threshed 231 sacks of choice plump grain from the piece in June.

After irrigating the land and plowing, the field was planted to

white dent Indian corn July 4. After planting, he cultivated once and cut for silage in November. After filling his silo which has a capacity of 110 tons, he allowed the silage to settle four days and then filled again, stretching a chicken wire around the top so he could heap the fodder higher than the sides of the silo.

In this manner he not only secured an exceptional revenue from the seven acres but effected a big saving in his supply of alfalfa hay which enabled him to feed alfalfa hay this spring when most of the dairymen in his locality without silos were scouring the country for feed.

Aerates Adobe by Irrigation.

Adobe soil needs air as much as moisture. That is the reason, according to Will Beresford, that the Northern California Nursery Company doesn't cultivate the furrows by which their splendid 1200-tree bearing prune orchard in Tehama county is irrigated. The cover crop of melilotus was not plowed under until mid-May, 1917. Five furrows were made in each center, deep furrows. These were to be filled with water, and filled again when the first water should have soaked away. Then they would dry out and the ground would crack wide open a foot deeper.

"We must supply air to the bacteria that help make our ground workable and of value to the trees," says Mr. Beresford. That air won't percolate adobe like it does sand. Subsoiling would cut the roots. Irrigation is to be repeated, as in past years, until about July 1, when the size of the fruit has been made. Last year it rained hard the last of June, otherwise another irrigation might have been given. Then the furrows were filled and cultivated to hold moisture and prepare the ground for prunes to drop on it.

Not so much moisture is lost by allowing adobe to crack as one would think, but anyway the air is needed and water is plentiful here.

Cutting Weeds Between Rows.

A useful device to use in weed eradication between the rows of cultivated crops is a knife-shaped piece of half-inch iron with upturned ends that may be attached to a one-horse cultivator. One can be made by the local blacksmith, three inches wide and 30 inches long. Have it turned up three inches at each end and two holes bored so that it can be securely fastened to the cultivator in place of the regular shovels. The length can be regulated according to distance between rows and the depth it is to cut at can be varied by length of the bent ends.

Drainage Water for Irrigation.

Is there danger from using the drainage water from one orange orchard to irrigate another? It is reported that one company in Riverside county irrigated their lower-ten acre blocks with waste water from the upper blocks. The lower trees seemed to be damaged, but recovered when fresh water was used for irrigation.

Drilled corn gives higher yields than hilled corn.

Mechanical Power on the Farm

Users of tractors, engines, pumping plants, motor trucks, automobiles, electric motors, and other mechanical farm power are invited to make this department an exchange of their experiences and troubles.

A DIFFICULT IRRIGATION PROBLEM SOLVED.

Mr. Wm. P. Nutting of Fresno, Cal., has solved a difficult problem for the ranch owner who has been suffering by the loss of water from irrigation ditches. Mr. Nutting is very enthusiastic over his discovery, which he has applied with thoroughly satisfactory results to a tract of agricultural land which he is developing near Fresno. An irriga-

wood boards. He now has half a mile of these flumes and is planning to build another half mile. He finds this gives perfect control over irrigation.

The distribution of water is made entirely by gravity, using a pump to raise it at the source of supply. In addition to a uniform and dependable supply of water, this system of

The above shows Mr. Nutting's system of flumes.

tion ditch, and particularly in sandy soil, very often breaks as a result of a gopher hole that begins with seepage and finally breaks completely through. This necessitates expensive delays on the ranch while repairs are being made.

Mr. Nutting has devised a system of flumes, made of 1x12-inch red-

wood troughs can be taken up and relaid, thus changing the direction of flow with small expense.

Mr. Nutting's experiment with this type of irrigation is being watched with great interest by the ranchers and the same system will be installed on quite a number of other ranches.

IRRIGATION PREVENTS PRUNE DROP.

An irrigating plant, along with deep, loose soil, owned by the Northern California Nurseries Co. of Tehama county, helps prevent the early dropping of prunes, which generally reduces the crop in their section. Last year there was a general drop of 40 to 50 per cent all over that territory before July 1, but none on this orchard, according to Will Beresford, one of the owners. He believes this drop is due to sunburning of fruit. Scant foliage, permitting the sunburn, is often due to lack of water throughout the season, as well as to lack of plant food. The irrigating plant also permits them to leave their winter cover crop unplowed until along in May, when it has collected about all the nitrogen it can from the air to be put into the soil for tree food.

From the bearing orchard, including 1,200 old French prune trees, the crops have grossed close to \$40,000 in the five years, 1912 to 1916, inclusive. Last year the crop sold for \$10,514. Commissions and drying cost about \$525 and Mr. Beresford estimates that it cost \$3,000 to raise the crop, not including interest on investment, drying, or marketing. This year the crop is the heaviest ever set. There has been no fertilizing except a little manure and six years of cover crops.

Such a record could not have been approached without water and the cheap fertilizer the water made possible in the form of cover crops.

When we saw the orchard, May 10, the melilotus indica was three feet tall, and Mr. Beresford said its roots were three feet deep, loosening and aerating soil so bacteria could work deeper, and depositing humus and nitrogen far below the plow depth.

A six-inch pump had been run by gas engine power, but a direct connected electric motor was being installed for greater convenience. Its 50,000 gallons per hour were to be pumped from the river near by through a ten-inch underground pipe to a head ditch along the high side of the orchard, whence it would spread through five furrows plowed in each center through the melilotus. Then the cover crop would be plowed under to add its fertility and lightening to the soil. Additional irrigation is practiced as noted elsewhere.

TRACTOR PREPARES BEAN GROUND.

[Written for Pacific Rural Press.]
About the middle of May Chas. Johnson was disking 400 acres in Sutter county for the third time with a 60-horsepower tractor to keep down the weeds and prepare it in fine shape for plowing about June 5, after which it would be planted to beans. The morning glory was several inches high and promising trouble, but after the tractor and disk passed over them the ground looked clean and smooth when the plants had wilted.

Plowing eight inches deep by tractor would not turn clods under deeply because of the fine mulch made by disking. But to smooth it off and crush the clods turned up by plow-

The Mogul Kerosene Tractor in a New Size

IN 1915 we introduced the Mogul kerosene tractor in a two-plow size. It met with instant and continued approval, so much so that it has far outsold all other tractors of its rated horse power put together.

We now offer Mogul 10-20, the same popular and efficient type as Mogul 8-16, enlarged, improved, built to draw three plows instead of two. No changes have been made in design except the few indicated by experience, or made necessary by the higher power.

The engine is larger, but it is the same efficient, slow moving, kerosene-burning type. The transmission is changed to give two forward speeds instead of one. Mogul 10-20 travels 1.8 and 2.5 miles per hour. The same simple, safe chain drive is used, the same good force feed mechanical oiler. In all essentials Mogul 10-20 is the reliable, dependable, economical Mogul tractor you have heard so much about from your neighbors, or know so well by experience.

Booklets and folders with full descriptions of the new Mogul 10-20 are now ready and will be sent by return mail on request. When you write for them, address

Uni-Lectric
ELECTRIC LIGHTING SYSTEM

Electric Light for Your Farm

Uni-Lectric lighting plant generates standard 110-volt direct current; operates from one to fifty lights, electric motor, electric iron, vacuum cleaner, electric toaster, force pump, churn, washing machine, etc. No Batteries—No Switchboard—and a better machine for less money. High speed gasoline motor, generator and automatic governor, all complete in one small, compact unit. Uses standard lamps and fixtures. Simple, easily installed, dependable, economical. Costs less than other systems to buy and to operate.

Write to-day for full description and low price.

Pacific Pipe Co.

MAIN AND HOWARD STREET,

SAN FRANCISCO, CALIF.

ing a "slabber" of three sections was to be used, smoothing a strip twenty-five feet wide every trip. Each section is made of eight 2x8's laid counter-shinglewise and held in place by crosspieces of 6x8 with the front end beveled like a sled. One of them was beveled too abruptly and it would not climb on top of the clods satisfactorily, but would shove dirt ahead of it. Clem Uhlen, who has worked on this ranch over a dozen years, pointed out that the beveled face should be a foot long on the 6x8 laid edgewise. A six-section drag 32 feet wide also helps work down the ground swiftly when planting time has arrived. About twenty-five horses are kept for cul-

tivation, but harvesting calls the tractor again into action on a big scale.

DESCRIBE REPAIR PARTS CLOSELY.

[Written for Pacific Rural Press.]
In ordering parts to replace those broken or worn in a tractor or engine, always give the size and model of the machine, when it was bought, and any other information that may help in getting the right piece sent promptly. An orchard tractor user broke the clutch of a well-known tractor made four years ago. He telephoned over one hundred miles for another and got it very promptly, but it was made for a different model. Another clutch was sent and it proved impossible to use, being three-eighths of an inch too wide. All this time the tractor was idle. It was then found that a clutch would have to be cast, and that took a delay of five days, with the clutch still to come. A neighbor loaned one to replace the broken clutch, but if that had been unavailable and if it had been plowing instead of cultivating time, the plowing could not have been done, intercrops could not have been planted, and the trees would have suffered.

A CORRECTION.

In the April 16th issue of our publication there appeared an advertisement of The Armco Iron Culvert and Flume Association in which it was stated that "Armco Iron is never less than 98.84 per cent pure." This should have been "99.84 per cent." The error was made, not through any fault of ours, but through a mistake in the making of the plate furnished by the advertiser. The Association have asked us to make this announcement correcting the error.

Housed implements depreciate at the following rates per year: Hay loader, 11.78 per cent; manure spreader, 11.67 per cent; corn binder, 10.03 per cent; harrow, 8.72 per cent; stirring plow, 8.42 per cent; grain binder, 7.91 per cent; mowers, 7.80 per cent; gang plow, 7.40 per cent; hay rake, 7.80 per cent; gas engine, 7.35 per cent; corn cultivator, 7.25 per cent; grain drills, 6.75 per cent.

The Ukiah Farmers' Club has sold about fifteen engines of 1½ to 3 horsepower for garden irrigation. Last year and year before, as well as this season, they have been selling larger engines and centrifugal pumps for farm irrigation. Many pumps are run by electricity.

A Mendocino county farmer has a big paddle wheel in Eel river geared to a centrifugal pump which throws water onto the level bench on the river bank where it irrigates a patch of alfalfa.

The little Hamilton vineyard tractor described in these columns about the time of the Fruit Growers' Convention at Napa as being perfected by a vineyardist of Sonoma county, is shortly to be put onto the market.

High Feed Costs Smashed!

Down they go—to smash! In scads of cases cut down a HALF! Thousands of farmers are selling their No. 1 hay, milling off grades. They're making the grandest alfalfa chop; fattening hogs, cattle, sheep, poultry and purse! making it cheaply, easily, with our famous patented Recutter Attachment (patented for feed use). Handles leaves, stems and all! No waste! no injuring color of hay. Makes dandy combination feeds from clover, rice, straw, cornstalks, bean straw, pea vines, oats and rye. Biggest guaranteed capacity 1200 to 2700 lbs. per hour. 600 to 900 lbs. of meal per hour with Junior Mill (run with 8 to 10 h.p. engine). Cracks peas, corn and beans.

SAMALLEY SILO FILLER

SEVEN SIZES
Tremendously simplifies silo filling. Grip Hook Force Feed table automatically feeds cutter—saves wage and board of from one to three men. Makes richest feed, increases silo tonnage.
Blower built independent of cutter. Let your fan spin fast or slow, the speed of knife shaft is unchanged. No belt to slip, wear out and waste time, money, power. Patented low-sliced one-pulley chain drive is faster, cleaner. Saves 1.5 to 1.4 power cost! Powerfully built. A fourth heavier with wonderful record for long service. Write for latest catalog and sample of chop to Pacific Implement Co., San Francisco, Cal., or Smalley Manufacturing Co., Dept. 41, Manitowoc, Wis.

GENERAL PAINT & VARNISH CO.,
112 Market Street, San Francisco, Cal.

South American markets for fruit from the United States have grown steadily since the war started. In both Brazil and Argentina the American apple is supreme in the better class of trade, and its sale is limited only by the number of people who are able to pay the prices asked for it.

General Agricultural Review

Field Crops.

The potato crop of Santa Barbara county, it is said, will be twice as large this year as last.

It is said that the bean acreage this season of Los Angeles county will be 75 per cent above normal and a greatly increased crop is expected.

The area planted to cantaloupes in California this year is estimated by the United States Department of Agriculture to be 17,300 acres.

Riverside county's potato crop, it is said, will be 300 per cent above normal this year and its bean acreage is 50 per cent above the average.

There have been a hundred thousand acres planted to kaffir corn in the Imperial Valley this season. The cold spring has caused some replanting.

Rice has not made a great showing at the University Farm so far as a feed for hogs, Professor J. I. Thompson reported to the California Swine Breeders at their meeting last week.

Out of 12,000 acres planted to rice in Yuba county this year, 9,000 acres have been put in by the Fleishhacker interests of San Francisco, County Horticultural Commissioner George W. Harney reports.

California's 1917 potato crop will be the largest in the history of the State, owing to the great increase in acreage, according to Thomas H. Longton of Sacramento, the "potato king" of the Sacramento Valley.

The California Stock Food Company, owners of the Kerman Alfalfa Mill, has announced that the mill will begin grinding alfalfa meal. The Stock Food Company will begin the season by paying \$11 a ton for hay.

The grain crop of Santa Barbara county is short this year. C. W. Beers, Horticultural Commissioner, says the yield of wheat and oats will not be over 75 per cent of an average.

Gardner Narbowne of Los Angeles has raised on his ranch near Mecca, in the Coachella Valley, on twenty-six acres, 10,000 crates of onions, which he has sold for \$15,000, yielding a net profit of \$10,000.

It is said that the efforts of the Timken Ranch Co. to raise hemp in the Imperial Valley are successful. They have 100 acres planted and it is doing fine. They also have forty acres of ramie fibre, used in making china silk.

It is announced from Santa Ana that the Sugar Beet Growers' Association of Orange county has decided to place a chemist and tare man in each of the sugar factories this season in order to have a check for the growers in the factories.

The Crop Reporting Board of the Bureau of Crop Estimates, United States Department of Agriculture, estimates from the reports of the correspondents and agents of the Bureau that the condition of the cotton crop in California on May 25 was 82 per cent of normal.

Deciduous Fruits and Nuts.

The Bartlett pear crop promises to be a record, both in size and quality of the fruit.

The production of persimmons in Japan for the year 1914 totaled 321,690,762 pounds of fresh fruit and 30,650,701 pounds dried.

Roy K. Bishop, Horticultural Commissioner of Orange county, says his county will have a big crop of excellent plums this season.

The winter of 1916-17 in the fruit districts of France will be remembered as one of the longest, if not the hardest, experienced in many years.

Grapes and plums in Riverside county promise well this year. D. D. Sharp, Horticultural Commissioner, estimates their yield at 100 per cent. Pears promise 60 per cent and prunes 70 per cent of an average.

The ranch of Dr. J. D. Reed of Covina, known as "Show Me," containing forty acres of walnuts, with intermediate crops of alfalfa and beans, was sold last week to W. E. Service of El Monte for \$40,000.

"Oregon prunes always sell cheaper than California," says L. F. Bridges, a representative of the large R. C. Williams Wholesale Company of New York, at the headquarters of the Growers' Association at San Jose recently.

Peach prices for the crop recently sold to the Merger Packer Company have been announced by the Tulare Peach Growers' Canning Association as follows: Freestones, \$27.50 per ton; Orange Clings and Tuscanas, \$45 per ton; Phillips Clings, \$50 per ton.

The Prune and Apricot Growers' Association has been asked to set a price for this year's fruit, but they have declined to do so owing to the present speculation in the food market and the chance for speculators to work on the prune market, it is reported.

Total shipments of deciduous fruits from California for 1917, up to June 8, were 198½ cars, according to a report by the California Fruit Distributors. Shipments to the same date in 1916 totaled 534½ cars, showing a falling off in early shipments this year of nearly 60 per cent, due to cool weather.

Late reports received from the horticultural commissioners of Santa Barbara, Los Angeles, Orange and Riverside counties indicate that the coming walnut crop will be a very good one. In Los Angeles county the setting is good and at present the outlook promises well, should there be no serious damage from the July blight. In Santa Barbara county the setting is also heavy, with but slight blight and no attack by the aphid. In Orange county walnuts, it is said, never looked better and the crop set is one of the heaviest ever had. Riverside county reports a fair outlook, the crop being estimated at 75 per cent of normal.

Citrus and Semi-Tropical.

Charles Eastin of Glendora reports the sale of his five-acre Valencia orange grove to A. Powell for \$15,000.

A bumper crop of navel oranges is predicted for the Lindsay district. It is predicted there will be a shipment of 5,000 cars next fall.

The packing houses in Lindsay are in full operation and the output in Valencias is increasing daily. Difficulty is being experienced in securing pickers and packers.

The Lindsay packing house last week shipped forty cars of Valencia oranges, the first of the season. Future and increased shipments are expected to follow.

FRUIT INTERESTS TO OPPOSE PRICE-DEPRESSING LEGISLATION.

As an outcome of the recent meeting at Fresno of representatives of the grape industry of California, it was determined to try to effect the State-wide organization of the grape interests, including growers, packers and shippers.

It was urged that adequate representation at Sacramento and Washington should be secured to block legislation affecting adversely this great State business, yielding, it was claimed, a cash revenue to our commonwealth of \$8,000,000. It is also noted that the big fruit organizations of the East, including practically the entire body of fruit handlers, have appointed a joint council whose chief function will be to watch legislative developments to the same end. Fairness to the fruit growing and marketing interests are to be encouraged.

VACATION

at the

RUSSIAN RIVER

Swimming, rowing, sailing, canoeing, hiking or just resting; recreation to suit every anticipation. Easily reached. Small expense. Accommodations from camping to city luxuries. Read

"VACATION—1917"

Free copies at 695 Market Street (Hearst Bldg.) or on application to J. J. Geary, G. P. A., 808 Phelan Building, San Francisco.

NORTHWESTERN PACIFIC

J. E. Pelton of Glendora has sold his ten-acre orange grove, close in, set to bearing Washington navels, and in good state of cultivation, for \$18,000 to W. J. Bowman of Minneapolis.

B. L. Reynolds of Covina has sold his twenty-acre Valencia orange grove, known as Valencia Park, at Rowland avenue and Lark Ellen street, to H. V. Bright, a Cleveland capitalist, for \$40,000.

The Edison Orange Growers' Association, capitalized at \$25,000, has filed articles of incorporation. The Association is the outgrowth of extensive orange planting east of Bakersfield. The tract is one of the show places of Kern county.

There is a possibility for a permanent market for California-grown figs, declares Prof. J. Coit of the Citriculture Division of the University of California, as they include many of the Oriental varieties. The greatest need is for co-operation among the growers and for the standardized and well-advertised brands.

The citrus growers of the Pomona district report a good season. The San Antonio Fruit Exchange that handles most of the crop, has, up to date, it is said, sold \$2,500,000 worth of oranges and lemons. As there are 1,000 cars yet to go forward, it is thought that the Exchange will close the season with sales aggregating \$3,500,000.

Grades.

Trouble over the sawdust-packed grapes, the Emperors, arose last season because shippers lost heavily. Grapes shipped East were packed with surface moisture still upon them, the moisture causing a sweating in the sawdust which resulted in rot. Growers should not pack Emperors until they are thoroughly dry.

California raisins are sold in every store in Kingston, Canada. A carload arrived from Fresno, Cal., consigned to a local merchant. In conversation with a large importer he said that the American raisin was far superior in quality and appearance to any that he ever purchased in Europe, that they are far better packed, and are more attractive than the Spanish fruit, for which reason customers are willing to pay a little more.

Miscellaneous.

The Brawley Cannery is erecting a building to pack tomatoes. Operations will begin June 15.

The Turlock Merchants' and Growers' Association have established two experimental farms.

The Healdsburg Canning Company is increasing its capacity for the coming season.

The value of crops grown on reclaimed land in 1916 is estimated at \$33,000,000.

Volunteers have cleared away several old buildings on the Ferndale Fair Grounds, preparatory to putting up more commodious new quarters.

The Irrigation Board has issued an order barring from the works of the Oakdale irrigation system all visitors.

The government is preparing to prevent a flood in the Imperial Valley, threatened because of an exceptionally heavy snowfall in the Rocky Mountains.

Three acres of the beautiful lawn at the Washington State penitentiary have been turned under and what was lawn has been planted to potatoes.

The machinery is being installed in the new cannery at Riverside and the plant will be gotten into shape as rapidly as possible. A big run on tomatoes is anticipated.

By an overwhelming vote the people of the Imperial Valley have sanctioned the issuance of \$2,500,000 in bonds for flood protection and irrigation improvements.

Three hundred and forty thousand dollars was the price paid by W. H. Graham to the Sacramento Valley Sugar Company for the 3,500 acre tract of land at Nord known as the Wilson ranch.

The United States Department of Agriculture will send a special investigator to the fruit markets of the Orient to seek markets in the far East for Pacific Coast fruit.

Contract prices paid to producers in Pomona range as follows: Peaches, Clings, \$45 a ton; apricots, \$50 a ton; tomatoes, \$10 a ton; loose alfalfa hay, new crop, \$16 a ton.

About 1,000 tons of lime have been used per year on Humboldt county farm lands for the past three years, according to Secretary R. W. Werner of the Farm Bureau.

Formerly San Francisco's veal supply was dependent chiefly on the slaughter of range calves in Butcher-town. Lately, however, the bulk of the veal has been dressed dairy calves.

Night and day patrol systems for the protection of growing grains and other crops is being agitated in a number of counties. The suggestion originated with the State Council of Defense.

Backing the Government to the limit, the California canners have offered the State's entire output of canned food products, valued at \$100,000,000, to be used as the National Council of Defense sees fit.

California hop, bean and dried fruit shippers are protesting against the proposed freight rate increase hearing before the Interstate Commerce Commission. Final arguments will be heard June 9, 11 and 12.

Twenty thousand extra farm laborers will be needed in order to handle the increased crop production in five counties of the San Joaquin Valley, according to reports received by the State Council of Defense from Vice-Chairman Naftzger of the Council.

The decision to establish a market center where farmers may pool their grain and produce for bids was one of the results of the first monthly meeting of the County Farm Bureau directors held with Farm Adviser J. F. Grass, Jr., June 9.

General Manager Charles E. Viriden of the California Fruit Distributors has asked the Federal authorities to recognize and classify fresh fruit as food entitled to transportation preference and for military exemption of laborers as accorded other food industries.

The farmers of Contra Costa county are taking active steps to secure a farm adviser. To obtain one at least one-fifth of the farmers in the county must form twelve or less centers, known as farm bureau centers, with dues of \$1 a year per member. The Pleasant Hill Farm Loan Association has authorized I. R. Tiklob to take up the matter and a call for volunteers is made.

California Crop Report.

Pasture.—June 1 condition 80, compared with the ten-year average of 86.

Sugar Beets.—June 1 condition 95, compared with the ten-year average of 92.

Cotton.—May 25 condition 82, compared with the seven-year average of 94.

All Hay.—June 1 forecast, 4,470,000 tons; production last year, 4,615,000 tons.

Oats.—June 1 forecast, 6,470,000 bushels; production last year, 6,500,000 bushels.

Barley.—June 1 forecast, 35,100,000 bushels; production last year, 33,320,000 bushels.

All Wheat.—June 1 forecast, 5,610,000 bushels; production last year, 5,600,000 bushels.

A summary of the June crop report for the State of California, as compiled by the Bureau of Crop Estimates, United States Department of Agriculture, is as follows:

Prices.—The first price given is the average on June 1 this year, and the second the average on June 1 last year: Wheat, 265 and 98 cents per bushel; corn, 181 and 89 cents; oats, 81 and 46 cents; potatoes, 275 and 119 cents; hay, \$17.50 and \$12.20 per ton; eggs, 32 and 23 cents per dozen.

Layne-Bowler Corporation,
Los Angeles, Calif.

Gentlemen:

After I learned of your kind of pump and finally began investigating the various kinds of pumps and centrifugal pumps, I arrived at this decision after making many inquiries from people who had installed various kinds of pumping plants and the conclusion was that there was nothing better than the pump that you installed for me.

I also want to say that it has made good all that you have said for it and that it could not make a better satisfaction. I also want to say that I have had from your collector, Mr. Parrent, a most courteous treatment. I have had from him and his actions have reflected great credit not only on himself but on your corporation.

I will be pleased to have you refer any prospects to me for my recommendation.

Yours very truly,
W. W. Mines & Co.

Sheep for the Farm in California

[Written for Pacific Rural Press by Prof. Robt. F. Miller, University Farm, Davis.]

With the advent of high prices for mutton and wool caused by a world's shortage, farmers are looking toward keeping a flock of sheep. Most farmers would not miss the feed consumed by thirty or forty ewes and would find the mutton and wool a ready source of income. A word of warning might well be added here, however, that a flock of sheep needs attention as well as other livestock on the farm.

The first question always asked by the beginner is, What is the best breed? This is partly because the various breeds of sheep are not usually well understood by the layman, and partly because the average man has an idea that there is a certain breed that fills all requirements and may properly be called the "best" breed. Certain breeds are better adapted to prevailing conditions than others, but the success in sheep raising as well as other classes of livestock depends chiefly on the care and management of the breed. Where market lambs is the aim, the farmer need not be particular about purebreds, but should select a type of sheep that best suits his needs. The

their heavy shearing qualities and their prolificacy. They shear heavier than other down breeds and twins are very common.

The Hampshire is somewhat larger and heavier boned and lambs develop very quickly where feed is plentiful. Twins are hardly so common as with Shropshires, and the fleece is lighter. The Oxfords are a very large and somewhat late-maturing sheep and there are very few in California.

The Southdown has many valuable attributes, but is not quite as large as the Shropshire and rather light in fleece. The Dorset Horn promises to become a very desirable farm sheep in California, as they are not only exceptionally good mothers, twins being the rule and often triplets, but will also breed very early; in fact, may be made to lamb in September and October. There are but a limited number in the State, however, and they shear rather light.

California conditions differ somewhat from other States and sheep raising on the farm is usually confined to the production of spring or milk lambs. This calls for a type of sheep possessing two special features,

The above two-year-old ram was exhibited at the P.-F. I. E. and exemplifies in a striking way the wool type of sheep. This animal is said by its owner to shear forty pounds of wool.

common black-faced ewe, usually a Shropshire-Merino cross, has often given good results.

There are about sixty distinct breeds of sheep, twelve of which are commonly found in the United States. They are divided into two general classes—fine wool sheep and mutton sheep. The former are principally associated with range conditions and possibly 80 per cent of the breeding ewes on the range are either straight Merinos or Merino crosses. They are very hardy and herd well (grazing together), which makes them especially adapted to the range.

The mutton breeds have usually proven most profitable on the farm. They have been developed under farm conditions and respond readily to such environment. Although the wool of the ewe is a most important matter, it is usually secondary to the production of lambs on the farm where feed and forage are plentiful. The principal mutton breeds are the Shropshire, Hampshire, Oxford, Southdown and Dorset Horn.

The Shropshire is a favorite with a great many breeders in California. They are of splendid mutton type, very active, lambs mature early and two strong features of the breed are

the ewes must breed early, and the lambs must mature early. Barring the Dorset Horn, the above breeds cannot qualify, as they cannot be depended on breeding early, and while the Dorsets breed early, there being so few in the State the farmer would experience difficulty in securing even grades.

The writer is of the opinion that the large-framed Merino ewes or Rambouillets are well suited for early lamb production. They will breed early, the lambs are fairly early in maturing, and the ewes are very hardy and shear well, the latter being quite an attribute at the present price of wool. The farmer will usually experience little difficulty in securing good grade Merinos in this State and should they be inclined to be small and too heavy on the wool order, they may be crossed with one of the above mutton rams and the resultant cross-bred lamb will be "hard to beat" from the market standpoint.

SHEEP FOR MORNING GLORY.

[Written for Pacific Rural Press.]

Pretty soon it will be impossible to cultivate any more in many orchards on account of limbs hanging down with fruit. But morning glory will thrive, and in prune orchards lots of

fruit will be lost in these weeds. J. D. Cox of Sonoma county is buying October-November lambs at \$5 to \$6.50 each to clean up this morning glory. He will fence the old orchard and

leave a runway to the house. Belle will be put on several of the sheep. If dogs get after them, they will run to the house, and if they do not the bells will warn Mr. Cox of the dogs.

Hillcrest Stock Farm

THORNTON S. GLIDE, Prop.

DAVIS, CALIFORNIA

Breeder and Importer of

Shropshires and Merinos

Shropshires sired by rams imported by me from England.

The Famous Glide Merinos.

My purebred range-raised yearling Shropshire and Merino rams are now ready for inspection at my place.

FOR SALE IN INDIVIDUAL OR IN CARLOAD LOTS.

A FEW SHORTHORN BULLS FOR SERVICE.

Romneys and Dorsets

My Romney flock is headed by imported ram from the Warorogamal flock, New Zealand, who was Senior Champion at P.-F. I. E., and a number of my ewes are from the flock of Mr. Ernest Short of New Zealand. These are the two leading prize winning flocks of that country.

My foundation of Dorset ewes was obtained from the flock of the late "Joe" Wing of Ohio and from the winning flock at P.-F. I. E. At the head of the flock is Woodland 88, No. 18,808, by King 14,967, purchased from Woodland Farm, Mechanicsburg, Ohio. Dorsets are the great sheep for early lambs. Will have a few ram lambs for sale next fall. No Romneys this year.

J. R. BLOOM, Dixon

Sheep in the Upper Coast Counties.

[Written for Pacific Rural Press.]

Despite or because of the exceedingly high prices of sheep and wool, more people of Humboldt, Mendocino and upper Sonoma counties are going out of the sheep business than are coming in. One reason for this, as expressed by B. M. Bucknell, extensive wool buyer in Mendocino county, is that few people want to stock up at present prices, since they would lose whatever reduction in prices may come.

In Humboldt county the range sheepmen refuse to increase their flocks, according to Farm Adviser A. H. Christiansen, because many pastures have been pastured so close that they can't profitably be reseeded, and the sheep must be run farther to their feed.

In all three counties the animals that prey on sheep make the losses greater as the prices go higher. These "varmints" include panther, bear, coyotes and dogs. Coyotes and dogs are the real menace to the in-

dustry, in spite of high bounties for the former.

In Humboldt county the Farm Bureau has started a campaign to get people on cultivated farms to put in 6 to 100 sheep each. About 2,500 acres operated in farms of 50 to 150 acres scattered all over the county are going to have sheep in a small way this year.

In all three counties the wool sells at close to the highest price in the State, principally due to the cooler weather, which prevents too much grease in the wool, later rains and fogs, which keep grasses and weeds green until after the spring shearing, the absence of certain weeds, such as cocklebur, and the increased black-face blood in flocks. With green feed until shearing, there is no break in the wool, and seeds and burrs do not ripen soon enough to infest the long clips of eight or twelve months' growth.

Why Sheepmen Should Cross to Shropshires

[Written for Pacific Rural Press by J. E. Bloom, Dixon, Cal.]

It has been demonstrated to the close observing sheepman this season more than any other that the man who bred his flock to the big, strong, vigorous Shropshire rams received a

much greater profit for his mutton lambs. A number of cases have come to my attention this season where the cross-bred lambs brought from \$3 to \$3.25 more per head than the other lambs. There is something about the carcass of the Shropshire lamb when it is hung in the market that appeals not only to the butcher but to the consumer.

The Shropshire when hung presents a firm white carcass, the meat is sweeter, and the breed matures much faster than others. All this is in favor of quick sales and greater profits. Mate the Shropshire ram with Merino ewes this fall and get the big profits.

PUREBRED SHEEP ON RANGE SUCCESSFULLY HANDLED.

(Continued from first page.)

Larkspur kills sheep when it first comes up. The common "milkweed" growing in patches on the range tempts yearlings mostly, especially if there are no other greens, and kills them. Sheepmen in old times, driving sheep down from Oregon, always aimed to drive around such patches. A number of other poison weeds are found in various localities. These should be studied by the sheepman.

In warm weather, after rains and in wet winters generally, the maggot flies lay their eggs on the hind quarters of sheep. When the maggots hatch they burrow through the skin and eat all around the ham, spoiling it for market and causing agony to the sheep. Yearling ewes seem affected worse than old ewes. In wet winters the sheep have to be caught and wool trimmed from the hind quarters, where it would get dirty and protect the maggots. In a dry winter like the last one, they were trimmed two or three weeks before shearing.

Shearing this season about May 1 was later than usual because everybody was shearing at once and help was scarce. But no harm was done by the delay, on account of the cold weather, which made it comfortable on the sheep, and the fact that fox-tail had not developed enough to get into the wool.

BULLARD RAMBOUILLETS

Flock founded forty-six years ago by the late Frank Bullard. Years of selecting and inbreeding to meet the range demand for a combination of big mutton carcass and Merino fleece have resulted in large, wrinkly-necked, blocky, well-covered, heavy shearing sheep. Our rams weigh up to 300 pounds and shear 35 pounds or better. If you want size, conformation and breeding, we have it. Nearly sold out for yearling rams.

BULLARD BROS.

WOODLAND, CAL.

Sheep Notes.

Miller & Lux are offering some good purebred registered Shropshire rams.

Charles Kimble of Hanford is offering fine one and two-year-old Rambouillet rams.

Ellenwood & Ramsey are using Corriedales to secure a combination wool and mutton sheep.

Butte City Ranch, in addition to other lines of purebred stock, are breeding fine Shropshire sheep.

Hillcrest Stock Farm of Davis have the usual fine offering of Shropshire and Merino range-raised rams.

E. C. Spear just sheared a 38½-pound fleece (a year's growth) from his P.-P. I. E. prize Rambouillet ram. He weighs 245 pounds.

Bishop Bros. of San Ramon report a very strong demand for Shropshires this season. This flock carried away a goodly number of prizes at the Chicago show.

H. Garnet, Willows, purchased of F. A. Mecham Estate fifty head of purebred Shropshire rams. Last year he bought 100 head of Mecham rams. He reports an excellent crop of lambs this season.

This nation produces only about one-half the wool it uses, and there is a shortage of practically all food-stuffs. The demand for both wool and meat is large. Wool is now selling for from 50c to 55c a pound and last year's lambs recently sold on the Chicago market for \$18.35 a hundred pounds.

Approximately \$25,000 worth of sheep and lambs was shipped from Hanford, June 9, to Placerville. The shipment consisted of 3,200 sheep and lambs, the property of Bastian Souza. The sheep were purchased by Don Biggs of San Francisco, who will put them on his ranch at Placerville to graze.

Bullard Bros. report an excellent demand for Rambouillets. Although they have probably the largest flock of purebred Rambouillets on the Coast (over 1,000 ewes), they are practically sold out of yearling rams. They recently shipped carload lots to Arizona, Montana and Wyoming. They are reserving a carload for the ram sale to be held at Salt Lake the latter part of July.

Only a quarter of the wool crop was left in Mendocino sheep raisers' hands June 5, according to B. M. Bucknell, a wool buyer of Ukiah, who says there are only eight crops left, including nine or ten thousand fleeces. It never sold at higher prices, Mr. Bucknell having paid 50c to 55c and some higher. The big clip on which A. W. Foster calls for bids from all buyers sold to E. H. Tryon of San Francisco for over 60c.

E. C. Spear is raising fine Rambouillets in Napa county. His ewes include a prize-winner at the P.-P. I. E. and his head ram was sired by the Grand Champion at the P.-P. I. E. This ram is himself a prize-winner and gets exceptionally fine lambs. A ewe lamb dropped February 1 weighed 100 pounds May 17. A ram lamb dropped February 5 weighed 104 pounds May 17. One of Mr. Spears' ewes dropped fine twin lambs and sheared a twenty-pound fleece of twelve months' growth.

REGISTERED SHIRE COLTS

James W. McCord, Hanford, Cal.

John E. Marble of Los Angeles is breeding Romneys and Dorsets at his farm, five miles east of Redlands. His flock consists of 25 ewes, 2 stud rams and 27 lambs. Mr. Marble secured as foundation the best blood available. His Romneys were secured from Mr. Mathews and Mr. Shore, who own the leading prize-winning flocks in New Zealand. His Dorset ewes are from the flock of "Joe" Wing, Mechanicsburg, O., and his Dorset ram, Woodland 88, came from Woodland Farm, Mechanicsburg.

J. E. Maurer is back from Western Texas and Arizona, whither he went to buy sheep and lambs. He says Texas is suffering from a long dry spell and he found the lamb crop there the lightest in the history of the State. It has also been dry in Arizona. Utah and Idaho report many deaths among lambs, making the crop in those States also short. Hence the high prices of sheep and lambs on the Eastern markets, they getting nothing like the supply of former years during the spring and early summer months. While away Mr. Maurer bought several large bunches of sheep and lambs, which he will fatten for market.

Bishop Bros. report the sale of about 300 very choice Shropshire stud rams this season to the following: M. Scally, J. G. Wannop, Parrott Investment Co., J. M. Robinson, Timken Ranch Co., W. C. Williamson, J. R. Snider, A. J. Gladding, C. E. Barnhart, Jas. Gallagher, Jr., H. H. Slater, J. F. Tate, Ray Branscom, E. Dickson, Elliott Brant Rancho, Mr. Gerloff, O. N. Shaw, G. W. Brown, W. H. Beister, Thos. F. Walsh, Theo. Davies & Co. They still have a limited number of very choice rams for sale. They report this season lambs of an exceptionally fine quality, showing plenty of bone, size, conformation, etc.

Dairy.

E. A. Hamner of Ferndale received \$292.75 for milk and butterfat from 12 cows in April, 1917.

The bulls admitted to the Guernsey Herd Register now number 43,625, and the cows 72,614, a total of 116,239.

Jes Peterson of Loleta, with 38 grade Holsteins, averaged 383.73 pounds fat in the year ending February 15, 1917.

Pomona milk dealers announce that in the future they will charge 5½c a pint for milk and 10c a quart instead of 9c as heretofore.

J. W. Coppini of Ferndale has offered a registered Jersey bull calf out of a R. M. cow to the highest producing herd in the Ferndale Cow Testing Association not tested previous to 1917.

Five cows in the Gridley Cow Testing Association produced more than 55 pounds of butterfat during the period of 30 days ending May 31. J. Trorcatey of Tudor showed a record of 65.2 pounds butterfat with his Durham No. 80.

The Humboldt County Dairymen's Association will hold its annual picnic the last Saturday in July at Loleta. It is free for all, and there are usually 1,500 to 2,000 participating, according to President J. N. Fulmor of the Association.

Karl A. Gotshall of Gotshall & Magruder, Ripon, writes us the following note of explanation: "In your issue of June 2 the writer notices that in mentioning the record of K. P. Tola Joe that you state it is the State record for under two years. We wish that you would correct this because this might make some people understand that Tola Joe was under two years of age, while she was two years and eleven months. She made the record as a senior two-year-old and the record stands for under three years."

(Continued on page 738.)

INNISFAIL DAIRY SHORTHORNS

GLENSIDE ROYAL 408155.

Our herd of registered Shorthorns has been carefully selected from the leading milk producing strains of the breed and is being developed along the same lines in our hands. The herd is headed by

THE GREAT VINA RANCH SALE.

The great Stanford herd of registered Holsteins is no more. At the three-day auction sale last week it was dispersed to buyers from all parts of California, as well as from Oregon, Nevada, Hawaiian Islands and South America. The sale had been well advertised and was well managed. There was an excellent attendance every day. Bidding was brisk and good prices were obtained. For the 285 head, including young bulls and calves, an average of \$200 per head was realized. The few cows that had records back of them were in especial demand. Bowed, the 32-pound cow, was sold for \$1,600 to Mrs. H. V. Bridgeford, while a two-year-old daughter went to C. A. Thayer for \$695 and a six-months-old daughter to J. D. High for \$505. The following is a partial list of the buyers: Gotshall & Magruder, Ripon; Bridgeford Co., Knightsen; Napa Hospital; W. B. Atterbury, Crows Landing; Geo. A. Smith, Corcoran; C. A. Thayer, San Francisco; D. A. Lindley, Sacramento; Baden Stock Farm, Baden; G. H. Umben, San Francisco; J. D. High, H. E. Cornwall and Frank Hatch, Modesto; Frank Johnson, Chico; W. H. Calhoun, Healdsburg; Dr. Smyth, Oakland; W. H. Daniels, San Mateo; W. H. Donaldson, Woodland; Wm. F. Saylor, San Francisco; James Mills Orchard Co., Hamilton; C. R. Kesler, Escalon; M. Mead, Galt; Lawrence Edwards, Stockton; Trinity Dredging Co., Lewiston; John Neto, Gridley; Charles Mahle, Standish; H. Mealey and R. E. Fields, Biggs; Cayoru and Matthey, Bakersfield; Ambrose Estate, Nord; D. A. Lindley, Sacramento; D. O. Lively, San Francisco; J. H. Johnson and G. W. Jacobs, Gold Hill, Ore.; Strang and Duell, Medford, Ore.; F. A. Martin, Reno, Nev.; J. L. Long, Mason, Nev.; J. M. Hind, Cohala, Hawaii, and E. Suseata, Santiago, Chile. Rhoades & Rhoades were auctioneers.

NOTES OF THE SALE.

A large percentage of the bulls were bid in by dairymen and will go to improve grade herds.

George A. Smith of Corcoran and Frank Hatch of Modesto each secured several carloads, largely young stock.

Gotshall & Magruder of Ripon secured a number of good individuals, including a twenty-pound heifer of show type.

A number of the best cows went to Nevada. J. L. Long of Mason and F. F. Martin of Reno secured several carloads of good ones.

The Bridgeford Company, whose stock topped the Sacramento sale, secured a number of top notchers. At the Vina sale Mr. and Mrs. Bridgeford were both discriminating bidders.

Mayo Newhall and Vanderlynn Stow attended the sale in the interests of the Stanford University. Mr. Stow announced that the money realized from the sale would be invested in a Liberty Bond.

Owen Duffy secured for the Napa Hospital herd Lady Ormsby Burke, a classy young cow with a record of 22.11 pounds made at three and a half years, price \$630; also some other fine ones.

Where to Get Ewes That Small Farmers Need

[Written for Pacific Rural Press.]

The sheep business in California is getting on a better, more stable basis, and is breaking up into smaller units very fast, like the small flocks generally found on Ohio farms, says T. H. Ramsey of Red Bluff. Mr. Ramsey believes there is more profit in sheep than in hogs, and that sheep products will not be materially lower at the end of the war than now. The dog problem is the great hindrance to sheep on small farms, but it can be solved, principally by legislation.

Where to get a few ewes to start with is not so hard to answer. Mr. Ramsey refers to his partner, Fred Ellenwood, who has a list of sheepmen; to Dr. Chas. Keane, State Veterinarian at Sacramento, who has a complete list for the State, and to county veterinarians and the United States Department of Agriculture livestock inspectors.

The farmer who wants a few ewes had better see these men or write to them before August or September and by all means see the sheep before buying them early in the fall. Honest descriptions differ, and seeing the animals before buying avoids dissatisfaction.

A bunch of farmers can get a better deal by clubbing together to hire a man to go see the sheep and get a large bunch at once. Ewes that are too old and have too poor teeth for rangemen's purposes can very profitably produce a foundation flock for the small rancher.

NEW RANGE FORAGE.

[Written for Pacific Rural Press.]

Humboldt county ranges, in common with those in other counties, have been pastured so heavily that the good native grasses have been nearly killed out, partly by close cropping and partly by the weeds, which are less eaten by stock. To replace these in locations where rye grass does not thrive is the object of the introduction by the Farm Bureau of two new range forage plants. As described by Farm Adviser A. H. Christiansen, one of these, Dallas grass, looks much like a plantain, grows taller if undisturbed, but when grazed by sheep it grows so close to the ground that they cannot get all of it. This plant is designed particularly for the sheep ranges. It has been tried out only a year, but appears satisfactory. Canadian bluegrass is being tried out for cattle ranges. It seems harder than common bluegrass, having larger, deeper, more widespread roots, while the tops grow closer to the ground if pastured heavily.

FORAGE GRINDING PAID WELL.

[Written for Pacific Rural Press.]

Several losses decided the Ruether Cattle and Feed Co. of Orange county to buy a mill and grind their own alfalfa, bean straw and beet tops to fatten beef cattle.

The big reason for buying a forage grinder was a comparative experiment. Two hundred and fifty steers fed 35 pounds of hay per head per day gained 150 pounds in 120 days. Another lot of 250 head gained over 200 pounds in 120 days on 24 pounds ground alfalfa balanced by mixing molasses with it. Grinding seemed responsible for much of the greater gain.

One season they lost 22 out of 800 head feeding them on beet tops.

E. C. Spear

ST. HELENA, CALIFORNIA

Breeder of

Rambouillets

I am breeding big, smooth-bodied, densely-wooled Rambouillets.

My stud ram was a prize winner at the P.-P. I. E. and was sired by the Grand Champion at P.-P. I. E.

Yearling rams all sold for 1917. Have some fine ram lambs dropped in January and February.

WRITE OR CALL AND SEE THEM.

The stubs of the beet tops were so hard that these cattle choked on them. Old cattle with poor teeth did not fatten until ground feed was purchased, and the improvement was very noticeable within ninety days.

CREAMERY WILL TEST FOR YOU.

[Written for Pacific Rural Press.]

Send your milk samples to your creamery to be tested if you have no Babcock tester of your own. This is what B. M. Brown and W. M. Colbert & Son of Corning do, and the cream-

eries seem glad to do this service for their customers. The Colberts, who last winter installed a lot of purebred heifers, hope to determine their value in an accurate way when they come in. Mr. Brown also is working into purebreds and he needs to know their value before they eat too much hay. Mr. Colbert, Jr., proposes to take the University short course at Davis and learn to do his own testing. Now all they know is the amount of milk each cow gives and the test for the whole herd, which was 6.4 the last time, according to creamery test.

PUMPKINS FOR HOGS.

To the Editor: Are pumpkins good hog fodder and do hogs like them?—F. M., Coachella.

Pumpkins are great stuff for hogs, but they won't replace grain satisfactorily. They are about 90 per cent water and 7.1 per cent digestible protein, carbohydrates and fat, according to Woll's Handbook for Farmers and Dairymen.

It pays to have comfortable warm quarters for your brood sows and other hogs, thus saving feed and protecting the animals.

Buying continues active in the Eastern wool market. Deals at 52c to 54c for Western wool are confirmed.

SHROPSHIRE, RAMBOUILLETS and AMERICAN MERINOS

In importing sheep from the East over fifty years ago, among the lot was one without horns. He grew to be a fine, large sheep, without wrinkles, and he sheared, when two years old, a twelve months' fleece, 35 pounds of long, white wool. We felt there was a great advantage in breeding bucks without horns and concluded to try and see what could be accomplished. We have bred from this ram and his get ever since, never using the same ram but one season. We keep our sheep in eight separate flocks and always are careful to not breed a ram on the flock he is from. We do not have more than one ram out of fifty with horns. Our rams at two years will weigh from 150 to 180 pounds, with strong constitutions. They have a long, white wool; a twelve months' fleece will weigh from 20 to 25 pounds.

OUR SHROPSHIRE SHEEP were imported direct from England in 1888 and have continued breeding direct from imported stock since. We have thoroughly investigated all the mutton breeds and have come to this conclusion—that the Shropshire is the best. They shear more wool and a better quality than any other mutton breed. They cross better on the Merino, losing but little in weight of wool. We have made the cross and are well satisfied with it, giving a stronger and larger lamb for market. We are offering this season an exceptionally fine lot of yearling rams for sale, singly or in carload lots. Our stock is all range-raised, hardy and good rustlers. Also have a fine lot of young Red Polled Bulls for sale.

In and Around the Dairy

[Written for Pacific Rural Press.]

Cows and Almonds Together.

Cows help the almonds and alfalfa on the ranch of J. Risse in Tehama county. The almonds are not pastured, for cows like the leaves, according to Mr. Risse. But Egyptian and milo corn are grown among three acres of young almonds. Manure is hauled as fast as made, except in bad weather. Most of it goes onto the orchard, but some onto the alfalfa. About twenty acres of alfalfa are cut for hay. The other fifteen acres of alfalfa are pastured so closely that there is no danger of overeating and bloat.

About twenty-three high-grade Jersey cows bred to a purebred Jersey bull have been bringing in cream checks all winter, besides helping fertilize the orchard. From ninety-five eight-year almond trees, \$334.84 worth of nuts were sold, besides seven sacks kept at home which were worth the cost of hulling the crop.

Feed Calves High-Priced Milk.

The California Central Creameries are paying 35 cents per hundred-weight for skim milk at Ferndale for their dried-milk plant. This milk must be delivered at the factory twice per day, where the butterfat is separated for butter. At ten or twelve cents for skim milk to be made into casein, says M. H. Nielson, who has supervision of the skimming stations and factories of Humboldt and Del Norte counties. These high prices tend to make some dairymen stint their calves or cut down the number raised. This is wrong, in Mr. Nielson's opinion, for whatever the price every dairyman should raise calves enough to replace stock that gets too old or otherwise out of the game. The factory at Ferndale and probably the rest sterilize all milk returned to dairymen, as well as using steam to sterilize the cans, etc., so that healthy calves may be raised.

Purebreds Pay Better Than Grades.

Milking fewer cows and making more money is the way E. E. Freeman explains his experience with purebred Holsteins during the past two years.

Previous to that time Mr. Freeman had been running a grade dairy but sold them and purchased a smaller number of registered cows with the money from the grades.

While the smaller number of purebreds have not produced so much fat as the larger number of grades produced, Mr. Freeman has made more money from the purebreds even while he was increasing the size of his herd because of the smaller cost per pound of butterfat produced and the value of his bull calves. He expects to still further enhance the value of his young animals by doing official and semi-official testing.

Piemelons for Hogs and Cows.

To the Editor: Of what value are citrons or piemelons for hogs and cattle?—M. L., Saugus.

J. E. Worthington of San Diego county last winter told us that piemelons are worth \$2 per ton when barley is about \$2 per cwt. He was feeding them to both cows and hogs, and made the following suggestions: When fed to mature hogs they seem to affect the kidneys. Hogs are especially fond of the seed, which constitute nearly half of the melon. Better give cows whole melons than to cut them into pieces on account of choking, which has troubled his own cows. They don't like piemelons when soft ripe.

Piemelons keep better if left in the field until used, rather than piling them up or handling them at all.

Cesspool Drains Cow Yard.

A cement cesspool six feet deep and twenty-five feet in diameter drains the corral in which E. O. McClure keeps his purebred Holsteins in Orange county. The corral is ridged so it drains to pipe leading to the cesspool. Thence the liquids run into irrigation pipe.

In pasture lands that cannot readily be plowed the best procedure is to apply lime.

Use SHARPLES To Prevent Cream-Waste

Sharples is the *only* separator that skims absolutely clean at *all* speeds. All other separators lose considerable cream when turned below speed—admitted by leading experiment stations and all separator manufacturers. Average loss from this cause is 10 lbs. of butter per cow per year, or 80,000,000 lbs. in the United States alone! Sharples would save it all!—due to the wonderful Suction-feed, which automatically regulates the milk-feed so as to insure clean skimming whether you turn fast or slow.

Sharples is an absolute necessity *now*—when the world is clamoring for "more fat." It is the *only* separator that gets *all* the butter-fat out of the milk. Prevent waste by getting a Sharples—and get it *now*, while you can. Ask nearest Sharples dealer to explain it.

SHARPLES Separator

the *only* separator that:

- skims clean at widely-varying speeds
- gives cream of unchanging thickness—all speeds
- has just *one* piece in bowl—no discs
- skims milk faster when you turn quicker
- has knee-low supply tank and once-a-month oiling

Made and guaranteed practically forever by the oldest and greatest separator factory in America. Over a million Sharples users! See your dealer and write for catalog today—address Department 31.

The Sharples Separator Co.

SWINELAND FARM,
W. O. Pearson, Prop. Woodland, Cal.

Buyers of excess dairy cattle for beef in Humboldt county are now docking everything 4 per cent for shrinkage. But at a recent meeting of the Dairymen's Association with a few of the buyers it was admitted that only old cattle shrink so much, and it is expected that a satisfactory basis will be worked out this fall.

The San Joaquin County Cow Testing Association reports a very successful month for May. Following are the five leading herds in butterfat production for the past month:

Owner—	Average lbs. Butterfat
Gotshall & Magruder, Ripon, 17 cows	45.3
F. J. Kell, Stockton, 18 cows	41.0
R. W. Fisher, Ripon, 22 cows	35.9
E. M. Thorpe, Ripon, 11 cows	35.5
O. Fowler, Banta, 26 cows	33.9

Swine.

The Vail Company of Temecula has gone into the purebred Duroc-Jersey business. They have recently purchased twenty high-class sows from Peters, Lamson & Walker of Devore, San Bernardino County.

The Timken Ranch Co. of El Centro has purchased the Duroc-Jersey boar which was third prize senior yearling at the National Swine Show. The price paid for this boar was \$900.

Duveneck & Pickersgill of Ukiah have recently sold several purebred Durocs locally. A sow and eleven pigs just farrowed sold for \$100, and several sold at three months old for \$15 each.

The Highland Herd of Fair Oaks have just purchased the five Chester White brood sows belonging to the Henderson Company. By this purchase the Highland Herd will have eighteen brood sows, all to pig within thirty days. Their first three sows to have pigs from the boar "Bonito Boy" came in with a total of thirty-nine pigs.

The Delta Farm and Livestock Co. of Colton has recently bought ten registered Holstein cows and two bulls at the Stalder sale and contemplates the purchase of a large number more. In connection with the hundred head of brood sows, all registered Duroc-Jerseys, which this company owns, this makes the beginning of one of the finest livestock ranches in Southern California.

That as good hogs can be raised in California as anywhere is being demonstrated by Russ Avery, who is building up purebred Berkshire hogs on his ranch near Lancaster. A delegation of business men of Los Angeles on a recent visit through the Antelope Valley stopped at the Avery ranch and said they never saw finer hogs anywhere. G. W. Brand of Los Angeles has recently bought out of this herd an eighteen-months-old purebred Berkshire sow for \$100 and a six-months-old purebred Berkshire gilt for \$40 for his country home, Loma Lodge, Los Angeles county.

Beef Cattle.

T. T. Miller of Los Angeles purchased at the Carpenter & Ross sale at Chicago last week one Shorthorn imported cow for \$3,100, a bull calf, ten months old, \$2,000, besides other stock.

S. V. Christensen, Horticultural Commissioner of San Luis Obispo county, says the pasturing carrying capacity of the county is about 67 per cent normal and they are overstocked. He also says that pastures are drying up rapidly.

The Fair Oaks Ranch reports the following recent sales in Shorthorn bulls: Four to Four Pine Ranch, Hearst, Cal.; one to William Muir, Willits, and one to Shadowlake Ranch, Willits. Also in Berkshires, a trio to Four Pine Ranch, Hearst, and a boar to George Fee, Westport, Cal.

W. M. Carruthers returned this week from the East, where he secured for his Mayfield farm a carload of Shorthorns—14 heifers and 3 bulls. These were secured from Hearts Delight Stock Farm, Chazy, N. Y., and Dean Curtis, Ames, Iowa. A description of this stock will be printed after it arrives. Mr. Carruthers also bought for Miller & Lux a carload of Dorset rams.

[Written for Pacific Rural Press by Susan Swaygood, Pomona.]

QUESTIONS ANSWERED.

Worms in Chickens' Breast Meat.

One of my hens died today; seemed in good health and very fat; the flesh part of the breast was watery, transparent and all under the skin were little white-looking worms. Killed one to eat sometime ago, but as it was similar to this threw it away.—J. O. C.

This is past my knowledge. I never heard of such a thing, but anyway you did wrong to throw it away; you should have cremated it. Is it not possible that the watery or mattery condition of the breast meat comes from injuries, bruises or something? No healthy fowl could be in that condition. I would try Santonine for worms and see if that will do it, but honestly I cannot tell you of any remedy except to get rid of them as soon as possible, clean up the premises and make another start.

Turks Swell Up Around Body.

Turkeys puff up around the body; seem to eat and drink all right, but swell up.—J. J.

This is a sign of dropsy and the only remedy I know of is the homeopathic remedy of Apis. You can get it in tablet form and dissolve a few tablets in the drinking water, half a dozen to a quart of water, and keep it up until cured.

Rabbits with Spots on Liver.

My young rabbits die at about six weeks old and I find the livers enlarged and covered with white spots. I feed rolled barley and greens, sometimes a mash made of bran, alfalfa meal and mids, and they have plenty of fresh clean water. Do rabbits have tuberculosis?—Mrs. V. M. C.

Answering your last question first: No, rabbits do not have tuberculosis, but they do have inflammation of the liver and they also have coccidiosis, and this is the most serious ailment of all. It is caused by internal parasites and once it gets in a flock it becomes chronic with the old ones and they pass it along to the young ones. This is what ails your flock. If you keep hutches in stacks that helps to spread the disease. Separate and spray with a good disinfectant and keep all ailing ones in coops apart. Dandelion greens are among the best.

Rye Too Heating.

To the Editor: Is rye a substitute for wheat as a chicken feed?—P. S., Oakley.

No; rye is of too heating a character to take the place of wheat. A little in winter is all right, but not in summer. Green rye is good. Substitute "gyp" corn for wheat.

Foxtail Troubles.

To the Editor: I had seventeen rabbits, one to three months old. During the winter I fed them alfalfa hay containing a lot of foxtail. About April 1st I started to give them green alfalfa, but two died the first night and another soon after. In a few days I switched back to dry alfalfa, but five more have died. They simply lay down and go unconscious. They have a good, clean pen, protected from the wind. My buck and three does are in good health. What is the matter?—L. P., Ripon.

Foxtail will cause inflammation of the bowels if it passes safely through the mouth and throat. So there is no help for it now. The foxtail will stick anywhere in the mucous membrane or passages. The only thing is not to feed it any more.

WILL EGGS REACH \$1 A DOZEN?

The poultry business is undergoing a great strain at present; the egg specialists are unable to maintain their flocks with the present prices of grain and eggs. There simply is no comparison between the feed price and the price of the hen's product. So it is going to result in a making over of the business, a case of the survival of the fittest. And the fittest to bear the strain will be the small poultryman or rancher who has a few fowls of the heavy types that can rustle around and earn a part of their living without flying into every neighbor's garden patch and will sell for table use twice what the cost of raising them was.

The idea that eggs will reach \$1 a dozen is not correct, because the eating public do not yet fully understand the amount of nourishment contained in eggs nor the real value of the mineral matter in them. As I see it, the thing lies this way: those who can pay a dollar a dozen won't do it, and those who would pay it can't. So don't let this dollar bug get in your ear, but just raise what chickens you can and if you can get a half a dollar a dozen you can stand the racket very well.

Purebred and Commercial

[Written for the Pacific Rural Press by Harry Mortenson, Sulsun.]

IMPROVING THE CALIFORNIA EGG.

To improve the condition of our egg crop is especially important now, when feed is high and the egg merchants are more particular. They have reasons to be, too, because eggs seem high to the housewife, and in order to make her use our products they must be attractive. The American people eat with their eyes; that is to say, appearance is first. Few people realize how perishable eggs are. Poultrymen should use improved methods of handling eggs until marketed. Increased prices to the consumer would be the result. It costs the wholesaler about 20 cents per case to candle eggs. Some poultrymen even have the nerve to ship incubator eggs. Anyone who willfully ships eggs that have been in the incubator for some time should be prosecuted by the Board of Health, since he does an injury to the industry in general.

PRODUCE GUARANTEED EGGS.

Every now and then the Board of Health confiscates a lot of eggs and every such disclosure has a tendency to reduce the consumption of eggs. The fear of breaking a bad egg, not the loss of food contents in the egg, is what makes the demand for guaranteed eggs. The wholesale egg dealers say they receive better eggs from the leading egg-producing districts than they do from the farmer. Why? Simply because the man who makes a business of producing guaranteed eggs cannot afford to do otherwise. The more he gets for his eggs the sooner he will be able to buy an automobile, and this seems to be the sole ambition of everybody nowadays. This is a speedy age and if we cannot keep up we will soon fall in the "also ran" class. The farmer should be more careful how he handles his eggs. That nest you found in the hay mow the other day should not be placed in the egg case until its contents are candled. The eggs may be

good, but who knows? Maybe the little red hen sat on them for a few days before you found them.

GUARANTEE YOUR PRODUCTS.

If you can establish a reputation for first-class goods, it will not be necessary to hunt a market. The market will hunt you. Some of the advantages of guaranteed or "certified" eggs are: 1. Increases consumption. 2. Supplies eggs of unquestionable quality. 3. Avoids waste. 4. Brings higher prices and greater profits. 5. Promotes a tendency to long-term contracts.

CHARACTERISTICS OF GUARANTEED EGGS.

Freshness.—If kept in a cool place a week old egg cannot be distinguished from those one day old. Fresh eggs can be easily detected from stale or cold storage product. The yolk of a fresh egg should be round and stand high; the albumen should be watery; while the yolk of a stale egg is flat and "white" watery.

Attractiveness.—Firm, strong shells are important, as thin, weak shells may break and soil several others.

Uniformity.—All eggs should be uniform in shape, color and size. Uniformity has a magic effect upon the buyer.

Size.—The standard egg should be 2.25 inches long and 1.7 inches in diameter at the widest place. Such an egg averages a trifle over 2 ounces in weight or 1.5 pounds to the dozen.

Color.—Eggs of the same color always appear larger and more attractive than mixed lots. Certain markets have a preference for special color. San Francisco markets prefer white eggs on account of years ago most of the eggs shipped from the East or rather Middle West were brown and local eggs were white, so the people were educated to the white egg. Color of the shell has no influence upon the contents of the egg.

(To be continued.)

GENERAL COMMENT.

AMOUNT OF DAIRY PRODUCTS IN STORAGE.

The following market statistics, taken from the San Francisco Call of Monday, June 4, is of interest to poultry and livestock men:

"Storage figures show that a substantial portion of the local supplies is still going into the icehouses.

"Statistics of storage holdings of butter, cheese and eggs in San Francisco and vicinity on May 30, with comparisons, are as follows:

	May 30	May 23	Year Ago
Butter, pounds ..	352,000	358,000	378,000
Eggs, cases	113,495	109,258	88,483
Cheese, pounds ..	502,289	432,875	1,030,380

Los Angeles holdings, with comparisons, are as follows:

	May 30	May 23	Year Ago
Butter, pounds ..	145,033	130,874	90,087
Eggs, cases	74,112	72,476	56,168
Cheese, pounds ..	231,050	210,205	107,372

These figures show that there are 25,062 more cases of eggs in storage this year than last in San Francisco and 17,944 more cases in Los Angeles, or a combined total of 43,006; but the shortage in the East more than offsets the surplus on this coast.

MORE EGGS PRODUCED THIS YEAR THAN LAST—PRICES ALSO HIGHER.

The poultry business in the State is on the increase, as shown by the market reports. The following are the figures: For the month of May, 1917, there was produced in California 2,755,140 dozen eggs, as compared with 2,129,210 dozen for the same month last year, showing an increase of 625,930 dozen eggs this year.

The prices for the month of May

this year were: High, 35 cents; low, 32 cents; average, 33.52 cents. The average last year for the same month was 24.85 cents.

EASTERN QUOTATIONS COMPARED WITH CALIFORNIA.

These prices are taken from the "Chicago Dairy Produce" of May 29. They are the quotations of Monday, May 28: Chicago, 33 1/2 @ 34 1/2 c; New York, 36 @ 37 c; Boston, 36 @ 37 c; Philadelphia, 36 1/2 c; San Francisco, 34; Los Angeles, 33 1/2 c.

EASTERN RECEIPTS IN COMPARISON.

Chicago during the month of May produced 191,306 cases of eggs less this year than last. In New York there was 41,918 less for 1917, while Boston produced 19,151 cases more this year. We can, therefore, look for shipments from here to the East this winter, which no doubt accounts for the excess amount stored in this State. The writer has not been able to secure quotations from the Northwest, but we understand the supply is way short.

STUDY OF MARKETS AND STATISTICS NECESSARY TO POULTRYMEN.

One of the points brought out by Prof. Dougherty at the poultry meeting recently held at Davis a few weeks ago was that we should study markets and market reports the same as a manufacturer. Therefore, the figures and comparisons in this week's issue.

DO YOU LIKE THE COMMERCIAL AND FANCY POULTRY PAGE?

If not, tell us where and how we can improve it. The writer has been in the poultry business for twelve years and realizes some poultry articles are not worth the paper they are written on. We are at your service, so make your wants known.

A few months ago the Rural Press made a brief reference to Sodium Fluorid as a remedy for quickly ridding fowls of parasites of various kinds. A number of inquiries were received from our readers for further details of this remedy, which were not then available. See Farmers' Bulletin 801 of the U. S. Department of Agriculture.

Poultry Breeders' Directory

Rates in this directory, 3c per word each issue; or if carried weekly for one year, 2 1/2 c per word.

BABY CHICKS—HATCHING EGGS—White, Brown, Leghorns, B. I. Reds, Barred Rocks; sturdy chicks from well-mated fowls; prompt; efficient service. Write for circular. Campbell Poultry Ranch, Campbell, Cal.

Mrs. Best's Letter.

WHAT TO WEAR IN VACATION.

My Dear Friends: Vacation time is here and to most of us, I hope, it means a little change of some sort. Perhaps a trip to the city, to view the interesting sights and do a little necessary shopping, or an auto trip to some beauty spot, where the outdoor life will rest and refresh one.

San Francisco is cool the year round, so an ordinary tailor suit will not be too warm to wear, with an extra coat if driving or out in the evening.

But for camp wear it is an entirely different problem. Most of us have old skirts that can be shortened for use in camps, but they should not be too heavy, nor of material that catches the dust and in turn is caught and held by every passing bramble.

If you must get new things to wear, there are very attractive suits being shown in the shops of serviceable khaki and tan crash outing cloth. The khaki suits are of heavy weight, with full skirt and smart Norfolk coats and range in price around \$5, while the tan crash looks much like linen and is cheaper in price. At one of the stores these suits are quite military in cut and are called "Miss Presidio."

Some of the styles have no coats, but are more like shirt waist dresses—the skirt being a plain gored model, while the blouse is loose fitting, open at the throat and long sleeved.

There are many separate skirts of khaki, corduroy, covert cloth, cotton Gabardine, poplin and pique in both plain and figured goods. These are all comfortably full, some of them pleated and have wide belts and patch pockets.

Most of these materials can be purchased by the yard and the garment made at home, but the price is so tempting on the ready-made garments that it hardly pays to do the work.

For the little people of the household, in addition to the ever-useful overalls, there are Indian suits, cowboy suits and military suits of tan cloth that would make any child happy to possess and the price is less than \$2.

The middy blouses and smocks are good for wear with the separate skirt and there are also striped wash silks made in simple styles and white wash waists with gay collars and cuffs with a bright tie at the throat. Pongee is very good style, both for suits and separate waists.

Instead of fancy work this summer, many women will be occupied with knitting and to hold the yarn and needles are shown very attractive hand-made rush baskets. Many women are carrying perfectly immense work bags made of gay cretonne and having hoops for handles. They more nearly resemble darning bags than anything else one can think of, but they are fine for the bulky work that almost everyone is occupied with.

ROSABELLA BEST.

POLISHING OLD FLOORS.

If the floor has never been finished, sandpaper thoroughly, fill the cracks with a paste wood filler and let stand until perfectly dry. Sandpaper again if necessary. Then apply a floor wax

THE HOME CIRCLE

with a soft cloth and let dry for a few minutes. Rub to a polish with a clean, dry brush or a soft cloth. A weighted floor brush is a great help. If the polish is not high enough, apply a second coat in the same manner. If the floor has been finished, clean thoroughly with gasoline (never with soap and water) and if badly marked, use a varnish remover, then proceed as for new floor.

USE OF RIPE OLIVES.

Ripe olives are a valuable, nutritious and easily digested food, as well as an appetizer, and should be used more extensively in cooking than they are.

For lunches for school children olives can be combined with other materials and make a variety of appetizing, nourishing sandwiches.

Hard-boiled eggs, put through a sieve and combined with chopped olives, and mixed with well-seasoned dressing, make delicious sandwiches, while cottage cheese and chopped ripe olives make very good brown bread sandwiches.

For salads there are innumerable combinations, olives with pineapple, or with Waldorf salad, nuts, celery and apples, or with any of the molded salads, they are a great addition, either served whole at the side or chopped.

NEW KNITTED SCARF.

One of the new things for the woman who knits to make is the new scarf. This scarf should be as long as the distance from wrist to wrist across the shoulder and about eighteen inches wide. Onto each end of this scarf knit a close-fitting cuff, having the scarf join on the under side of the arm. It may just fall loosely there or be tied with ribbon bows to the elbow. This gives the effect of the scarf across the shoulders, without having the dragging ends over the arms.

HOME-BREWED BEER.

Editor Home Circle: I would be very grateful if one of the readers of your paper could furnish me with a good, tried recipe for home-made beer or ale. I have drunk home-brewed beer that beat the commercial product all hollow, but have lost track of the person who made it.—W. F. A. McI., Thermal.

If some of our readers can furnish this information, we will pass it along.

EXTRA TIN CANS.

Large tin canisters or tin cans with removable covers may be utilized for canning certain fruit products. Such cans should be sterilized and their covers hermetically sealed in place with solder or wax.

CANNING FRUITS WITHOUT SUGAR.

The sugar used in canning fruit is for the purpose of improving the flavor and is not necessary for preservation.

Fruit of any kind suitable for canning may be put up without sugar, but unless it is thoroughly ripe it will be necessary to add the sugar when it is to be eaten.

The ordinary methods of home canning may be used, either the cold pack or hot pack methods.

In the cold pack, fruit is prepared as needed and packed tight in clean, sealed cans or jars. Water as hot as can be used without cracking the jars is added and the covers put on loosely. The jars are then placed in a vessel of boiling water for twenty to forty minutes. A wash boiler with a tray on which to place the jars will answer the purpose. The water in the boiler should come half way up the sides of the jars. While still very hot, the tops should be screwed tight and the jars taken out and placed upside down to cool.

For the hot pack the fruit is cooked on top of the stove in a large kettle until tender, with a small amount of water to prevent burning. After reaching the boiling point, the jars are filled with fruit and enough juice to cover. Seal the cans and for an extra precaution heat for twenty minutes in the boiler.

If there is an excess of juice, it may be used for jellies, by boiling it hot and making the jelly up as wished.

SPAGHETTI WITH PIMIENTOS.

One 10c can pimientos. Butter 6 brown custard cups, line with pimientos and fill with spaghetti prepared as follows: Cook 1-3 package of spaghetti in boiling salted water until tender, drain and when partially cool add 5 tablespoons grated Swiss cheese, mix thoroughly, season with salt and pepper. Steam on top of stove twenty minutes, turn out on platter so as to show pimientos, and put 1 tablespoon following sauce on top. Sauce—1 half-inch slice butter, yolks of 2 eggs. Melt butter and when cool drop slowly on beaten egg yolks, as when making mayonnaise. When mixed, add salt and paprika to taste and 1 tablespoon vinegar. Prepare sauce while spaghetti is steaming.

SPRING MULLIGAN.

One cup new turnips, diced, $\frac{3}{4}$ cup carrots, diced, $\frac{1}{2}$ cup potato, diced, salt, cook in just enough water to have none to drain off. Make cream sauce of 1 tablespoon butter, melted, to which is added 1 tablespoon flour, salt and pepper and 1 cup of milk. Cook until creamy and pour over the vegetables.

Good Health.

[By H. E. Pastor, M. D.]

Potato Bread vs. Wheat Bread.

Is it desirable to substitute potato flour for wheat flour, as advised by the economy department of the U. S. Department of Agriculture? we have been asked. Not as long as you can afford to buy the wheat article. It is a very simple matter to substitute bulk for bulk, but you get bulk only in the substitution and not the chemical or food value equivalent. Potatoes are deficient in protein (the tissue-forming element) as compared with wheat, and therefore cannot take the place of this cereal as a food for growing children. Potatoes, as such, however, are an excellent and sustaining food. In respect to the mineral salts contained, they are superior to wheat, showing a much larger proportion of lime and potassium combinations. In England, where the use of potatoes in bread and cake making is much commoner than in the United States, this writer has eaten a great deal of "potato cake" and enjoyed it as a tidbit. However, weight for weight, potatoes are less nourishing than the wheat cereal, and when served at the table potatoes should be served frankly as potatoes. The dinner is no worse off for knowing it and the server may have the satisfaction of a clear conscience.

Thoroughly Cook Your Pork.

Twelve cases of trichinosis were diagnosed by the county physician of Marin county in March last. These cases all occurred in one home, that of a Portuguese family living in the country, and was brought about by eating partially cooked pork and uncooked sausage. It is not a safe practice to eat raw meat of any kind under any circumstances, unless you have some knowledge of the condition of the animal before being butchered. Pork from unknown sources especially should come under suspicion. See that your fresh pork is well done before being eaten.

Eat Enough and No More.

The following is a good standard to be guided by at the table: "Eat enough food and no more," rigidly followed, would reduce greatly food bills in many homes and at the same time tend to improve the physical condition of all members of the household. If there is any departure from this rule, we would advise eating a little less than you think you need.

Health Notes.

The lemon is the most useful remedial agent in the whole category of fruits and vegetables.

Professor Metchnikoff believed that carrots contain a sugar that kills a bacillus that shortens human life. There is a popular tradition that carrots possess, too, the property of bestowing a fine complexion on those who eat them regularly.

"As a man thinketh so is he." This is true in large measure of health, though not to the extent that the drugless practitioner would have us believe. By thinking health and visualizing the results of good health, strength and robustness tend to be induced.

FLUFF.

O little cat Fluff, how sweet you are—
All dressed in your tiger silk,
With your long black tail all marked
in rings
And tipped as white as milk!

How bright are the eyes in the little
cat head,
How soft is your rhythmic purr;
How sharp are the claws in the little
cat paws,
And how warm is your coat of fur!

O little cat Fluff, with his tinkling
bell
Hung on a ribbon red,
Is fast asleep on the kitchen lounge
With his paws beneath his head.
—Dumb Animals.

HOUSEHOLD HINTS.

The life of a linoleum can be
much prolonged by frequent oiling.

Grease the cup in which molasses
or honey is to be measured and they
will not stick to the sides and
waste.

Sugar syrups can be prevented
from graining when standing by
adding cream of tartar to the syrup
while hot.

Layers of papers put over the
springs, under the mattress, help
keep out the cold air in a bed on
a sleeping porch.

In baking large cakes that must
remain in the oven some time, put
a pan of water in the oven. This
will prevent burning.

Vegetables, soups and meats must
be sealed in the usual fruit jar or
tin can to keep, so these should be
reserved for that purpose.

To remove wall paper, brush over
with alum water, using a large
brush. Let dry, and the paper can
be removed without trouble.

The more rapidly carrots are boiled
the smaller is the amount of nutri-
ents extracted and the loss in
weight. Even less material is lost
when the carrots are cooked by
steaming. This probably is true also
of parsnips and other succulent
roots.—Office of Home Economics,
United States Department of Agri-
culture.

SAN FRANCISCO.

San Francisco, June 13, 1917.
WHEAT.

The numerous conflicting reports of the country's crop prospects from Eastern sources—sometimes indicating large crops and sometimes shortages—together with a nervous feeling as to the attitude of Russia and the general war situation, engenders a sense of insecurity amongst dealers. Receipts from the North are unusually light. Jobbers' stocks virtually are cleaned up, yet there is very little demand; and, for the reasons above mentioned, values are weaker, with declines in evidence. The same bearish influence was felt on the Chicago market on Tuesday.

BARLEY.

New crop barley is turning out rather light weight, although the volume is of good average, exceeding expectations earlier in the season. In some sections, however, the barley crop is said to be of exceptionally high quality, showing the difficulty in arriving at correct conclusions, owing to the great area of the State. Very little old stock is on hand and, with not much demand owing to unsettled conditions in the brewing industry, the market is weak and listless.

Shipping, ctn.....Nominal
Brewing.....Nominal
Choice feed, ctn.....\$2.05@2.10

OATS.

Reports from the North as to the yield there are very encouraging. In California the acreage sown to wheat was smaller than usual, and the season's crop is, therefore, in accordance. As a consolation, however, all reports confirm the fact of the grain being of full weight. Trading consists merely of transactions in a jobbing way and the market consequently is weak and declining.

White feed, per ctn.....\$2.55@2.60

BEANS.

The local market is unusually quiet for this time of year, when generally the demand is good. There was heavy buying earlier in the year—due to hysteria on the part of the public—and these accumulated stocks must be exhausted before there will be any active demand for more, so that in about thirty days or so there should be a resumption of trading.

HAY.

Arrivals of old hay for the past week have totaled only 828 tons. The demand, however, is remarkably light both in San Francisco and in Oakland, and no shortage has developed. The very high prices have caused many former users to substitute motor vehicles in whole or in part; and where horses are still employed the most rigid economy is employed, thus reducing the outlet for hay materially. Harvesting of the new hay crop is in full operation in many sections, and some new hay has now reached this market. This, in carload lots, is bringing \$17.50 to \$18.50 for barley hay and \$20 to \$22.50 for wheat hay. Alfalfa hay continues to be in good demand, and is moving into consumption satisfactorily. No second cuttings of alfalfa have yet reached this market. The export demand for hay is not so active at present as it was, though there is some export movement right along. There is no demand for hay for Coast shipment, owing to the high prices. With a fair-sized crop in sight, dealers urge that the high prices are not justified and that lower figures must be accepted before the crop sells freely.

Straw, per bale.....1.00@1.10

FEEDSTUFFS.

Naturally, at this season, all millstuffs feel the effect of the plentiful green feed, and of the harvest now beginning to get under way. Nearly all lines have taken a decided tumble, bran leading the way with a decline of \$2. Middlings, rolled barley, rolled oats and shorts all shared the same fate; and only coconut cake withstood the onslaught, and that, being unaffected by any harvest in this temperate zone, advanced a dollar. There is no tankage offering.

POTATOES, ONIONS, ETC.

Receipts of new potatoes are fairly large and of excellent quality. There is very little local demand for old stocks. Considerable shipping of Garnet Chilies is being made to Chicago and other Eastern points. A big crop of Garnet Chilies has been raised in the Mission Hills in this city. Onions are plentiful, but the heavy demand keeps prices steady. String beans are cheapening, the good weather bringing them in in larger quantities. Wax beans are lower. Tomatoes are arriving slowly from Imperial Valley, and are selling readily in this market at \$2 to \$2.25. Green onions are quoted at 40 to 75 cents a box.

POULTRY.

Receipts of California poultry stocks continue in good supply, as they have been throughout the week. In spite of heavy arrivals, however, the local demand was able to take care of them in good shape. The fact that the domestic lines have been moving better is in a great measure accounted for by the fact that there has recently been a slackening off of Eastern shipments to this point. Broilers under one pound is the only line to show a decline for the week. Squabs were quoted on Wednesday at \$2.50 to \$3 per dozen. All other lines remain firm at former quotations. Ducks and geese, for some time disregarded, seem to have re-

gained interest and are now selling well.

BUTTER.

The week's receipts totaled 601,800 pounds, against 541,100 pounds for the previous week, showing an increase of 60,000 pounds. This is another factor weighing down the market, for, as predicted last week, a break in the market has occurred. Prices dropped a half cent on Monday, a cent on Tuesday, and on Wednesday was 2½ cents below Saturday's quotations. There are several causes for this. The Eastern production is a month late this year, and the present time is the Eastern full season, thus taking the Eastern buyers out of the market for the present. Some Government orders are coming in, but they are easily taken care of. There seems to be no apparent reason for any advance at this time, and the market may be termed weak with a tendency to drop further.

EGGS.

During the week 17,005 cases of eggs arrived, less than the previous week's supply, which was 18,165 cases. In spite of a diminution of receipts, values have not been maintained, and they are weak to day at lower quotations. Some anxiety may be felt by dealers on account of the tremendous stocks in storage, exceeding those of last year considerably.

Special Deciduous Market Report

(By J. L. Nagle.)

Sacramento, June 11, 1917.

Eastern cherry markets up to date have realized exceptionally high prices. The demand has been in keeping with the supply and the quality of the fruit has been considerably above par. In most instances the quantity of the cherry crop was underestimated. Due to the difficulty in securing certain classes of lumber necessary for the manufacture of what is commonly known as the Eastern cherry box, cherries have been packed in some districts in twelve and twenty-basket crates and also in lug boxes. This is rather an innovation and an experiment as far as California is concerned, but has worked out very satisfactorily and it is not unlikely that a very large proportion of next season's cherry crop will be marketed in a different style package than has been commonly used in the past. The deciduous season is about two weeks late and when the bulk of our fruit comes in competition with Eastern fruits, this may prove somewhat of a handicap. The crop of shipping apricots is light but the quality is exceptional. What few cars have arrived in the East have found a ready market and indications are that the entire crop will move at good prices. Early varieties of plums and peaches are moving East in light supply and finding a ready market. The following prices have ruled for the week:

Boston.—Royal Anne cherries averaged \$1.95; Bing, \$3.00; Tartarian, \$2.00; Republican, \$2.10; Oregon, \$2.10; Rockport, \$1.50.

New York.—Tartarian cherries averaged \$1.92; Rockport, \$1.60; Royal Anne, \$1.95; Oregon, \$1.90; Nonpareil, \$2.25; Bing, \$2.50; Royal apricots, \$3.70; Seedling, \$2.55; Pringle, \$2.15; Mayflower peaches, \$1.70.

Chicago.—Tartarian cherries, \$1.60; Republican, \$1.90; Bing, \$2.30; Royal Anne, \$1.60; Oregon, \$1.90; Royal apricots, \$2.60; Newcastle, \$2.10; Seedling, \$2.42; Clyman plums, \$1.42.

Total shipments to June 12, 251 cars.
Total shipments same date, 1916, 740 cars.

ceptional. What few cars have arrived in the East have found a ready market and indications are that the entire crop will move at good prices. Early varieties of plums and peaches are moving East in light supply and finding a ready market. The following prices have ruled for the week:

Boston.—Royal Anne cherries averaged \$1.95; Bing, \$3.00; Tartarian, \$2.00; Republican, \$2.10; Oregon, \$2.10; Rockport, \$1.50.

New York.—Tartarian cherries averaged \$1.92; Rockport, \$1.60; Royal Anne, \$1.95; Oregon, \$1.90; Nonpareil, \$2.25; Bing, \$2.50; Royal apricots, \$3.70; Seedling, \$2.55; Pringle, \$2.15; Mayflower peaches, \$1.70.

Total shipments to June 12, 251 cars.
Total shipments same date, 1916, 740 cars.

Special Citrus Market Report

Los Angeles, June 12, 1917.

Shipments of citrus fruits from Southern California from November 1 to June 10: Oranges, 28,564 cars, and lemons, 3065 cars. Same time last season: Oranges, 23,042 cars, and lemons, 4175 cars.

Shipments from Central California from November 1 to June 8: Oranges, 4229 cars, and lemons, 164 cars. Same time last season: Oranges, 5384 cars, and lemons, 146 cars.

There has been a further improvement in this market the past week. The eastern market situation continues strong. The navel season is fast drawing to a close and the Valencia shipments as yet are light. At all the eastern markets both oranges and lemons are reported higher than a week ago, and the demand very good. Locally the market has shown a stronger tone in sympathy with the situation east. Buying, however, has been moderate, as there is much other fruit and many berries on the market to attract the attention of buyers from oranges. Local packers are still paying 1@1½c per pound in the grove, picked, for navels and bidding 1½@2c per pound in the grove.

picked, for Valencias. At these prices they are making fair purchases. Grapefruit continues slow sale at 1½@2c in the grove, picked. Lemons are doing little better. Good shipping stock is bringing 1½@2c in the grove, picked, but lower grades are dull at much lower prices. Have to be sold for what they will bring.

AUCTION SALES.

New York, June 11.—Forty cars oranges and four cars lemons sold. Market strong and higher on oranges and strong on lemons. Weather cloudy. California navels averaged \$1.75@3.85. Valencias averaged \$3.00@3.80. Lemons averaged \$3.40@4.65.

Boston, June 11.—Twenty-three cars sold. Market stronger and higher on both oranges and lemons. California navels averaged \$2.25@4.00. Lemons averaged \$2.70@4.30.

Philadelphia, June 11.—Fourteen cars sold. Market stronger and higher on both oranges and lemons. California navels averaged \$1.90@3.35. Valencias averaged \$2.90@3.20. Lemons averaged \$4.40.

PREVAILING FOOD PRICES LARGELY SPECULATIVE.

At a meeting of all California canning organizations held in San Francisco last week, an agreement was made to offer to the United States the entire pack of the season at a price to be set by the Government. This matter is now before the Food Commission at Washington. The further complication of the marketing situation is the bill before Congress to empower a Food Commission to fix the price on all staple food products. Until this matter is settled, very little trading will be done. The fact that the world needs California food products, however, means that good prices are to be expected, though the present market is chaotic.

CHEESE.

There is little to be said about cheese this week. On change it proved very weak, in sympathy with its cousin, butter. Supplies reaching here aggregated, during the week, 315,000 pounds, overtopping those of the previous week of 271,500 pounds. Probably there will be less export demand.

Y. A.'s.....23½c
Fancy Calif. Flats, per lb.....23½c
Monterey cheese.....16@24c

DECIDUOUS FRUITS.

Storage apples, while ostensibly in the market, are really to be considered "out," as they are practically exhausted. A few—very few—green apples have arrived and are selling at from 15 cents to \$1 per box. Figs from the Coachella Valley are arriving pretty freely. Peaches and apricots have dropped in value owing to the heavier receipts as the season advances. Cherries are firm at former quotations.

Cherries, bulk, per lb.....5@10c
Royal Anne, per lb.....5@10c
Apricots, per crate.....\$1.10@1.25
Peaches, per crate.....1.00@1.25
Figs, per box.....1.00@1.50

CITRUS FRUITS.

It is only a matter of a couple of weeks when navel oranges will be a thing of the past, and Valencias will rule the orange market. Valencias took an advance Wednesday of 15 cents a box owing to the heavy demand engendered by the hot weather all over the country. The same conditions apply to lemons, which from indications, will advance probably a dollar during the next two weeks. It is an axiom among the trade that warm weather makes good prices for citrus fruit of all kinds, especially lemons.

DRIED FRUITS.

The old refrain "quiet but steady" applies to the dried fruit line today. Due to lack of tonnage, there is no exporting of any consequence, so dealers are reduced for revenue to home trading only. No change in values is noted. Eastern buyers are already approaching the prune and apricot growers association in the Santa Clara Valley; but while wishing to receive orders at the base price, the Association has not yet fixed this. It may be 6 or 7 cents, but as yet nothing definite has been arranged. The crop of prunes in the Valley is very large and said to be a "bumper."

LOS ANGELES.

Los Angeles, June 12, 1917.

BUTTER.

Receipts of week ending June 12.....385,740
Receipts of same week last year.....451,040

There was a much freer movement to market the past week, yet with an improved consumptive demand the market was held steady throughout. While the receipts since our last review have been better, they were still lighter than the same week last year. There was taken into cold storage here for the week ending June 9, 1917, 83,145 pounds of butter against 49,390 pounds the same week last year, the excess of holdings now being only 33,692 pounds, against 54,946 pounds the end of the week previous. Chicago went off 1c and New York 1½c for the same time, but this had no influence upon the market here. Extra in Chicago Monday was 29@30½c, making a difference between that and the San Francisco market of only 2@2½c. Tuesday, with light receipts, the market held steady in a face of lower markets both in Chicago and San Francisco.

EGGS.

Receipts (railroads) for week ending June 12, 1917, 2,713 cases.
Receipts (railroads) for week ending June 12, 1916, 3,783 cases.

The market the past week developed a decidedly weaker tone. Receipts were better and the markets East broke sharply, which had a bearish influence upon the market here. But at the lower prices there was some disposition to take hold for storage purposes. Besides the receipts of fresh

GRAIN SACKS HIGH PRICED OWING TO SHORTAGE.

Barley and wheat sacks are now selling in quantity at 13 to 13½ cents each, as against 8 to 10 cents a year ago. We learn that the San Quentin prison output has been all disposed of; and, while the supply now available from other sources is good, yet the larger grain crop than was anticipated a month ago will doubtless cause a shortage before harvesting is completed. Barley is now being harvested and the yields are running heavy. Instead of a 450,000-ton crop, the estimates now are for fully 700,000 tons in California.

ranch eggs, there were 400 cases of Petalumas in during the week. There were taken into cold storage for the week ending June 7, 1917, only 643 cases, against 1,598 cases the same week last year. The excess of cold storage holdings June 7, 1917, was 16,989 cases, against 17,944 cases at the end of the week previous. Chicago declined 12½¢ on first and New York 2½¢ on first, resulting from better receipts and a falling off in the demand under the influence of high prices. The speculative trade seems less bullish inclined now than awhile back. Tuesday, with a marked dropping off in the receipts, the market on call was bid up ¼¢ and there was more trading than for some time.

VEGETABLES.

The market was better supplied the past week and the prices of many things showed a downward tendency and sales slow. Cabbage was in liberal supply and lower, but demand fair. Onions, string beans and peas coming in more freely and were slow sale and lower. Tomatoes were in very good demand and the best higher. Cucumbers coming in freely, slow and lower. Green corn was scarce and higher. Some lima beans were in from Imperial Valley and met with a fair demand. Summer squash in better supply and slow sale, but prices unchanged. New potatoes in good supply and weak.

We quote from growers:
New potatoes, per cwt.\$3.00@3.15
Peas, per lb.84¢@.84c
New onions, silver skins and Ber-
muda, per crate\$1.25@1.30
String beans, wax, per lb.44¢@45¢
do, Kentucky Wonders, per lb.44¢@5¢
Summer squash, per crate of four

Imperial tomatoes, 4-bkt crate.\$1.65@1.75

Cucumbers, per box of 2½ to 3
dozen50¢@75¢
Green corn, lug\$1.00@1.25
Cabbage, per 100 lbs.60¢@75¢

BEANS.

If anything, the market was duller than ever the past week. As stocks are light, what few beans on hand are being held at old prices.

We quote from growers:
Lima18¢
Large white17¢
Small white16½¢
Pinks13¢
Blackeyes10½¢@11¢

HAY.

There was a little more doing in this market the past week. Receipts were not heavy, only 127 cars, and there was a better demand both from the country and local buyers. Demand not sufficiently strong to advance prices. Growers are finding trouble in getting help for baling.

We quote f. o. b. Los Angeles, old crop:
Barley hay, ton\$19.00@21.00
Out hay, ton20.00@22.00
Alfalfa, northern, per ton17.00@18.00
Alfalfa, local, ton19.00@20.00
Straw, ton11.00@12.00

FRUITS.

Market better supplied the past week both with peaches and apricots of better quality. Both sold fairly well and brought a little more money. Cherries in only moderate supply; good demand and higher. But few loquats in; season about over; hence we drop them from the list. Figs scarce and what few in brought more money.

We quote from growers:
Avocados, per doz.\$4.00@5.00
Cherries, black Tartarians, per lb.12¢@15¢
Royal Ann12¢@14¢
Soft White, per lb.12¢@14¢

Special Livestock Market Report

San Francisco, June 13, 1917.

CATTLE.

There has been considerable activity in the cattle market lately and stockgrowers have been able to maintain prices. It looks as though quotations would remain fairly uniform for some time to come, with any variation upward. Range calves are somewhat more plentiful, though the advice of the Government to hold stock back is influencing to some extent the policy of stockmen.

Grass Steers—

No. 1, weighing 900 to 1200 lbs.81¢@84¢
No. 1, weighing 1200 to 1400 lbs.81¢@83¢
Second quality8¢@84¢
Thin, undesirable6½¢@7½¢

Grass Cows and Heifers—

Calves—

Lightweight94¢@94¢
Medium84½¢@84½¢
Heavy7¢@7¢

SHEEP.

The unprecedented prices offered for wool the country over have a strong bearing on sheep quotations, and if this continues prices are likely to go higher. The market supply of mutton about balances requirements. Only the lack of adequate feed supplies induces growers to let go their ewe lambs.

Lambs—

Yearling12¢@12½¢
Milk12¢@12½¢
Sheep, unshorn wethers.11¢
do. do. Ewes10¢
HOGS.—The supply of hogs is still below the market demands and likely to continue so until the summer feeders are finished in the fall. Prices tend upward. Hard, grain-fed, 100 to 15013¢
do. do. 150 to 30015¢@15½¢
do. do. 300 to 40014½¢@14½¢

DRESSED MEATS:

Hogs20¢
WOOL.—The wool market holds up with undiminished strength, all grades of fleece wools being in demand.

Los Angeles, June 12, 1917.

CATTLE.

There was a steadier tone to the market the past week. A break of 50¢ per cwt. the week before caused a dropping off in the offerings. But where feed was scarce and the cattle ready to come to market feeders were willing to accept quotations. Holders, however, supplied with feed were disposed to hold back and trust the future. Killers were all in the market, but were not urgent buyers.

Calves still dull and weak.

Per cwt. f. o. b. Los Angeles:
Beef steers, 1000 to 1100 lbs.\$8.50@9.00
Prime cows and heifers7.00@7.50
Good cows and heifers6.50@7.00
Calves, per cwt8.00@9.00

HOGS.

Good packing hogs made a further advance. Not many coming in and they altogether from California. The continued high markets east and north compelling killers to bid prices up in order to draw hogs this way. With hogs selling in Chicago \$14.55@15.85, we should not expect cheap hogs here. These are high prices; but with corn selling in the Central West at \$1.50@1.55 per bushel, and it taking a bushel of corn to make ten pounds of pork, it will be seen that hogs are no higher than the feed that it takes to make them. Killers, while all in the market, were only fair buyers.

Per cwt. f. o. b. Los Angeles:
Heavy, averaging 250@300 lbs.\$12.00@12.50
Mixed, 200@250 lbs.13.50@14.50
Light, 175@200 lbs.13.50@14.50
rough docked 20 pounds, piggy sows 40 pounds and stags 40 per cent.

SHEEP.

With a short lamb crop everywhere this spring and the high prices of wool, sheep men have been marketing their sheep and lambs slowly. Hence a steady, firm market. Killers were all in the market the past week, but with a light demand for mutton and lamb at the high price which it has to be sold, they are asking for no great number and killing is much lighter than this time last year.

Per cwt. f. o. b. Los Angeles:
Prime wethers9.00@10.00
Prime ewes9.50@10.00
Yearlings10.50@11.00
Lambs13.00@14.00

Publisher's Department.

In this issue we devote a large part of our space to sheep production in California. Each year we do this, because we believe sheep should have a larger place in agriculture of this State. As the range becomes more restricted and as the price of meat advances, the small farms must of necessity produce sheep. At the present price of mutton and wool, there can hardly be expected larger profits made in any other branch of production. Of course the present high prices will not continue indefinitely, but the small bands of sheep will pay well for several years to come. Get a few ewes and a good buck, raise some mangels and alfalfa, and with the feed the sheep can rustle on the place, they

will be kept economically and produce profitably.

New subscribers are coming in rapidly these days. During the past week we added 261 new paid names to our list. Every subscriber pays \$1 per year for the Rural Press.

Our book "Second Thousand Questions in California Agriculture Answered" is of particular value to fruit and grain growers, stock and poultry people, as well as dairymen and irrigation work. Send for a copy, \$1.50 postpaid.

The great possibilities in breeding purebred cattle are brought forcibly to mind by the dispersion sale held by Stevens Brothers Company at Liverpool, N. Y., May 15, 16 and 17. A total of 309 head of Holsteins brought \$242,665. The biggest price was paid for the great sire, King of the Pontiacs. He went to N. W. Salmon of Glenfield, N. Y., for \$10,500. The highest female was K. S. P. Diona, who went to the Fred F. Field Company for \$6,350.

WANTED.

WANTED—Young men and women to attend the Western Normal Course—Normal and Academic. The Normal Course gives an adequate preparation for teaching, at a great saving in time and money. Academic course gives practical finish to education. Write for Bulletin "A," Western Normal, 524 E. Market st., Stockton, Cal.

WANTED—Young married couple for ten-acre ranch, fully equipped, on shares, or will sell stock and rent; horses, cow and 1,600 hens. Box 610, Pacific Rural Press.

WANTED, A GARDENER—A man with good experience and character to work on shares. W. R. Tiekles, Elk Grove, Cal.

COUNTRY LANDS.

FARM PROPERTY—5½ acres in alfalfa, ¼ acre in fruit trees, grape vines and berries. New 8-room house with bath—\$1,000. **TEN ACRES**—Eight acres in seedless Thompsons, all upon poles, 5 years old, bearing. Adjacent Santa Fe depot. \$7,000—part cash. **A COZY HOME**—½ acre garden tract. House 5 rooms, mill and trees—\$1,500. Cheap for the place. Address C. W. Kahl, Le Grand, Cal. **LE GRAND** is a coming town. A branch railroad into Mariposa county. Irrigation ditch is on foot. High School and Grammar School. Two Protestant churches.

FOR SALE—640 acres of half section good wheat land, 26 miles east of Calgary, in irrigation block; raised 45 bushels wheat per acre last year; about 250 acres in crop; 350 acres will summer fallow; 25 acres in alfalfa; modern and complete improvements; \$5,000 cash, balance arranged; price per acre, \$60. Box 17, Cheadle, Alberta, Canada.

FOR SALE—One of the best improved 20-acre ranches on the Los Molinos project; buildings all new; price, \$10,000; cash \$4,000, balance on time and terms to suit purchaser. Geo. Book, Los Molinos, Cal.

DEEP LOAMY RIVER BOTTOM—25 acres alfalfa, 30 wooded pasture; irrigated; big barn; thirty good cows; Vina Ranch bulls used five years. Manuel Viter, Los Molinos.

STEVENS COUNTY—Lowest off land where stock-raising and dairying pay. Free booklet. Phoenix Lumber Co., Crop Department, Spokane, Washington.

STATE, GOVERNMENT AND INDIAN Lands—Bargains overlooked. Free New Blue Booklet. Joseph Clark, Sacramento.

WANTED to hear from owner of good ranch for sale. State cash price and description. D. F. Bush, Minneapolis, Minn.

ALMOND GROWERS PROTEST HIGH FREIGHT RATES.

Setting forth the claim that foreign almonds are grown on cheap lands with cheap labor, as contrasted with similar conditions in this State, and that the tariff tax does not offset the high freight rates from California to Eastern points, T. C. Tucker, manager of the California Almond Growers' Exchange, protested recently before Examiner George Wood of the Interstate Commerce Commission against the east-bound freight rate of \$1.40 on shipments of nuts to Kansas City. California is said to produce about \$1,000,000 worth of these nuts annually, the yearly imports from France and Italy amount to about \$4,000,000, and our almond growers are asking for a square deal so far as transportation charges are concerned.

BRENTWOOD IRRIGATED FARMS

63 miles from San Francisco in Contra Costa County.
1,000 Acres planted in Alfalfa. For sale in tracts of 10 acres and up.
Also first class orchard and general farming land. All under irrigation.
One to three miles from railroad station.

Safeguard your casings with New FISK TUBES

THE Summer months are coming when tubes are subjected to their greatest strain. Replace any tubes which will not stand up under that strain. Forestall inconvenience.

Don't chance ruining perfectly good casings with worn-out tubes. See to it NOW that your tube equipment is right and ready to meet all the conditions of Summer driving—have complete Fisk equipment.

Fisk Tubes have been of laminated construction ever since they were first built—that is, built up layer upon layer of pure rubber.

New Fisk Tubes bought NOW will give you better tire satisfaction and lower up-keep costs for the balance of the season.

THE FISK RUBBER COMPANY of N. Y.

General Offices: Chicopee Falls, Mass.

Fisk Branches in San Francisco, Oakland, Sacramento, San Jose, Fresno, Los Angeles, Riverside, San Diego, Hollywood, Pasadena, Reno, Portland, Tacoma, Seattle and Spokane. Fisk Dealers Everywhere

Fisk Gold Bond Tubes are RED—there is no higher tube quality anywhere

Fisk Pure Fine Para Tubes are GREY—the most popular tube in the country

If you do not find a Fisk Branch in the partial list above that is convenient to where you live, write for complete list—there may be one nearer you.

Equipment and Methods in Peach Drying

[Written for Pacific Rural Press.]

OW THAT every dried-peach grower can get a better price for better peaches, it pays to exercise care in handling, and to have labor-saving, fruit-saving equipment. It is none too soon to get the equipment ready and to engage help from the schools if the usual help be not available. With sulphur and fruit high priced, perhaps the first thing to look after is the sulphur house. Make it air-tight, preferably of concrete if possible, as mentioned in our paper recently, and then provide a little controllable ventilation so that the sulphur will burn. Then come the trays. If apricots are to be dried on the same trays, it may pay to have larger ones. We present the advice of Mrs. F. G. Weeks and her son, F. H. Weeks, who have forty acres of drying peaches in Tehama county, and who have studied the situation well in their part of the State. If more than one man can be used in the shed, provide 3x6 trays. They are heavy enough when filled with peaches and stacked twenty high. Make the trays 1 1/2 inches deep, using pieces 3/4 x 1 1/2 for sides and ends, with sides 6 feet long and end pieces 34 1/4 inches long.

The bottoms are 5 3/4 x 7 1/8 inches, 3 feet long, and the clincher strips are 3/4 x 1 1/2 inches. The Weeks' have used 1,000 such as these for three seasons with very little breakage. Use pine, not redwood. If the bottoms are made of too light wood, the trays twist when picked up full of peaches and spill the juice. Don't use one-man trays if you can use two men, for two-men trays hold three times as much as the others and are more convenient to handle. One man cannot lift a small tray so high, either. If trays are over 7 feet long, and of the same material, they are likely to sag in the middle when picked up loaded. Use 60-pound lug boxes to avoid wasted time traveling with light loads.

PROVIDE TIGHT STORAGE.

A special storage room may save its cost in a crop or two by keeping fruit from drying out too much and by keeping out insects. The model kind has concrete floor and walls, and enough bins 8 feet square to hold much of the crop. Many people throw their peaches into a corner as they come from the dry yard. This always leaves a thin edge on the pile of peaches which in the aggregate loses many pounds of weight. The thin edge is repeated in taking them out later. The bins will avoid this.

In taking peaches off the trays, keep the fat ones separate or they may mold. Grade the peaches roughly and keep slabs, etc., in different bins.

To tell when they are cured enough not to mold in bins, but not so dry as to lose weight for the grower, crush some of them in the hand. They are all right if they spring back to shape, but are too wet if they remain in a packed ball. A further test is to rub the skin with gentle pressure. If it does not loosen, the peach is dry enough.

Pick the peaches. Let them get fairly ripe, or they will be white and tasteless and light weight. To tell when they are ripe enough, one test is to break a peach in two. If the broken side is sharply jagged like broken iron, it is too green. If the points are rounder, it is ripe enough. If the peach mashes in the hand, it will make a dark slab.

Don't let the fruit get ahead of you so there are a lot of windfalls. But pick up those that drop every day, for an ordinary bruise does not show up unless it has time to penetrate through the peach.

Whole Dried Apricots Reduce Labor

[Written for Pacific Rural Press.]

Labor was short. Weather was warm. Apricots were ripening faster than they could be handled. Everybody was drying as fast as they could pick and cut the fruit. C. O. Silliman had the largest apricot orchard in

Pajaro Valley. Overripe apricots would make either slabs or slop. There was one thing to do.

The full-ripe apricots which dropped to the ground were put onto trays direct from the wagons without cutting. They were sulphured and dried whole. That was to save the firmer fruit which was picked from the trees and cut. A whole carload of whole dried apricots were produced that season. Fruit that would have been all slabs was perfect, dried whole.

PREFERS PEACHES DRIED WHOLE.

Since then Mr. Silliman has used whole dried apricots in his family, preferring them to the others, even if he

Extra Care in Handling, Drying and Storing Peaches Will Pay the Grower, Now that a Good Market by Grades Is Assured.

had to pay the same price per pound, including the pits. He gave the writer some, which were eaten with pleasure by our entire office force. We had to steal some of them away to test their cooking quality. There is a sort of pit (hydrocyanic acid) flavor to them which is decidedly agreeable. Being the ripest fruit, it was also the softest and sweetest. Only by soaking the fruit over night in cold water and handling it very gently, cooking over a slow fire, were we able to avoid mashing them. They were not so tart as ordinary dried apricots, and required practically no sugar, though the little sugar that is used should be cooked into them. The box we received had been packed over two years before, and the fruit was in perfect condition. Mr. Silliman sees no more reason for taking pits out of apricots than from prunes, especially the small sizes, which have been dried more or less without cutting in other parts of the State. There seems to him no reason for the waste of time, labor and fruit involved in cutting ripened apricots. It cost 10 cents per box last season. Besides, for ten

WHAT FARMING WILL DO FOR WAR.

EASTERN reports of amplitude of coming crops indicate that this country will be able to justify expectations placed upon it as a source of food for our European allies in the world's great struggle for liberty and humanity. Some of the pessimistic forecasts, based upon small visible supplies and unfavorable outlook last winter, have been shown to have been hysterical. The present outlook is for large production, but of course the demand promises to be very large and the danger of speculation unusually great unless regulated by Government action for stabilization of prices. As we write on Tuesday, the telegraph brings an outline of a statement made today, before the Senate at Washington, by Herbert C. Hoover, in which he says:

Provisions for the Government to buy and sell commodities will be necessary for use only as to a very few prime commodities. The aim is to stabilize prices and thus eliminate speculation. The balance wheel for stabilizing prices is gone. We need an artificial balance wheel. By setting up a wheat commission we can buy wheat, regulate its storage and transportation and handle it until exported or sold in this country. If we do not do this, wheat prices may relapse on account of our not being able to store and carry it, with speculators securing the sole benefit and farmers bearing the loss. We can contract with the allies for a certain return for every bushel of wheat we can sell. By controlling prices at interior terminals we can assure millers their supplies and simplify transportation.

Nothing is said about shortage in production but much of the danger of speculation reducing the producers' reward and placing under tribute consumers at home and in countries allied with us abroad. And those who hope to gain from such speculation are active in defending their chance. According to current reports, they have dug their trenches in the United States Senate and it is expected that the effort to dislodge them will be difficult. It seems clear that American farmers will generously discharge their duty toward winning the war, but there remains the chance that their merciful munitions may be selfishly dynamited before they can get into world-saving action.

* * *

WHAT THE WAR MAY DO FOR FARMING.

IT IS generally conceded that the current war, curse as it is upon the human race, will brighten the outlook for humanity in many ways. That is the reason this country proposes to win the war at whatever cost. One of the compensations may be the clearing away of selfish interference and making more direct and fair the relations between the food producing industry and those to whom it is ordained to minister. President Wilson himself says of the power he asks of Congress:

"The object of the measure is not to control the food of the country, but to release it from the control of speculators and other persons who will seek to make inordinate profits out of it and to protect the people against the extortions which would result. Those who oppose the measure ought very seriously to consider whether they are

not playing into the hands of such persons, and whether they are not making themselves responsible, should they succeed, for extraordinary and oppressive prices of food in the United States. Foodstuffs will, of course, inevitably be high, but it is possible, by perfectly legitimate means, to keep them from being unreasonably and oppressively high."

This is the issue which bids fair to occupy the upper house at Washington all this week or longer. Whatever may be the full result of the political and commercial conflict which will be waged, it cannot be doubted that some things will be done which will draw sharp lines between fair trading and gambling in farmers' crops. This has been sought by farmers generally for years. They have been making slow progress toward the reduction of the evil by organized effort. The war is sharply bringing to the public mind the justice of their contention and it must be recognized and enforced in some measure.

* * *

OUR READERS CALL FOR ORGANIZATION.

JUDGING by the drift of their communications, there is a strong, prevailing conviction among our readers that the only way to right agricultural wrongs, and to secure for the producer what properly belongs to him, is through organization. There is nothing new in such a conviction. It prevailed at the birth of this journal, forty-six years ago, and was not new even at that remote date. It has probably existed ever since food producers felt the first pressure of the overlords of trade or tyranny, and, for aught we know, the first manifestation of it may have been when the high chiefs and food-contractors began to "mobilize and speed up the farmers" to feed the army of mud and brick men at the building of the tower of Babel. It was probably at that remote date also that traders and politicians conceived their counter-conviction that they could best get the service they required from farmers by tying their legs and arms together and keeping their heads apart. And this has surely been the prevailing policy, for while all the classes to be profited by farm production have laid their own heads together, the farmers' heads have been kept wagging in all diverse directions from time immemorial. And they are doing the same to this very day, in spite of all the strenuous, and temporarily promising, efforts which have been made to get them to see and shout together for their own mutual interests and economic rights. Undoubtedly the most important question for the advancement of agriculture has always been how can the farmers be induced to get their heads together, and this is still the great question, and we cannot answer it. During the last forty years we have had three farmers' associations of national name and scope installed in this State. The oldest achieved great social service for farmers but forbade political action, and finally abandoned business effort because all its general institutions in that line were failures. The next was practically all politics and business effort and the two disagreed and wrecked the outfit. The youngest exalted education, science and co-operative business enterprise and is still creditable in these lines—but chiefly in a limited local way. None of these general efforts at State-wide organization has achieved its purpose, though all have ministered to the prosperity and higher life of their membership. None have arrived, not because their aims and purposes were not good but because no effort they could make enabled them to get enough farmers' heads wagging their ways.

* * *

CAN A DICTATOR STOP WAGGING?

WE THINK NOT. The heads have wagged too long and the owners of the heads enjoy the oblique wagging too much to slow down to a straight bowing which gives consent. Besides, the farmers' heads have been so abundantly batted in the eyes and pulled at the nose by all kinds of dictation, social, political and economic, that they involuntarily strike and dodge in all directions and have come to glory in what seems to be real independence in wagging. It seems to us that this country's half century's experience in failure to secure national membership and geographical breadth of influence for a gen-

eral agricultural association amply demonstrates that effective organization on the basis of direct action of a national membership is, under present conditions at least, impossible. And not only is it impossible to secure such national influence by this democratic method for the whole country, it seems also impossible for such a method to dominate the diverse agricultural interests of a single State. We believe no single organization includes in its membership a majority of the farmers of a single State, although a working majority has, we believe, been secured by affiliation of different organizations of similar purposes in some States at some times. What we are saying is intended as a background for such a picture as this, which one of our readers furnishes:

I hope that Harris Weinstock will have something to say as to whether it is advisable at the present time to attempt to organize all the farmers of the whole State into one organization—cutting out the parasitic jobbers entirely. The common impression is that such organizations as those of the raisin and citrus growers are a howling success. I don't know just how the raisin men stand, but I know that in spite of the immense work done by the citrus management they only claim to control about 60 per cent of the product, etc.

Of course, we could ask Col. Weinstock to hold forth on this subject, but we are pounding our own pulpit just now and like it too well to stop. To our mind, propositions like the above, to mobilize all the farmers into an association to displace middlemen, are impracticable for two reasons: because the farmers will not take hold and because the jobbers will not let go. There will not be any real fight on that front for the very old reason: "One's a'feared: t'other dassent." Whoever has a mind to wait and see a great democratic uprising of farmers in their own behalf had better carry his lunch with him. So far as this discussion goes, therefore, we may say that Col. Weinstock will not "attempt to organize all the farmers in the State into one organization" because such a thing has been demonstrated to be impossible.

* * *

WHY SPECIAL ASSOCIATIONS ARE THE ONLY HOPE.

IT IS our notion that the only hope of efficient organization lies in the possession of full economic information and the business sense to use it efficiently. The understanding of agriculture as a whole or in a very broad way is an academic qualification. It is the stock in trade of an instructor or a bureaucrat. It does not qualify its possessor to grow and sell cabbage. As it is with men so it is with associations, which are only multiples of men. An association of all the farmers could no more efficiently grow and sell cabbage than an association of all manufacturers could run a shoe factory nor an association of all merchants sell shoes. To possess full economic information and the business sense to use it efficiently requires an association of cabbage men in one case and an association of shoe men in the other. But there are, of course, some things affecting the cabbage industry which affect all other crops and some things about shoes which relate to all other merchandise. What these things are and how to use them to the advantage of all crop growers in the one case and of all manufacturers or merchants in the other can be learned and applied by a general association which can compare and correlate the insight and experience of many special associations, each of which is wise and masterful in its own line. And now, dropping all analogies, it seems to us clear that the only way to get an effective general association of farmers is not to try to assemble them by tens of thousands, as those which have hitherto failed to arrive have already done—but to work incessantly for strong associations of special producers who can possess themselves of the economic wisdom and business sense which they severally need in the handling of their special products, and then affiliate them, through their chosen representatives, in a general association which can work for general attitudes, policies and points of view which the whole industry, of which they are parts, demands for its success, prosperity and relative rights among the producing and commercial activities of mankind. As our correspondent,

quoted above, acknowledges, we have in California special associations of raisin growers, citrus growers (and very many others) which have not yet covered all of the products which are their specialties, and yet they have covered enough to save these specialties from financial ruin and have given to each of them a bright and dependable future. It is our conviction that these associations, working in their specialties, even with such percentages as they control, have done much more for the success of California agriculture than a general farmers' association ever could have done, even though it had every farmer in the

State on its membership roll. Each one of them has mastered its problems by full economic information and business sense, which no such general association could ever have secured by any system of subdivision, committee work or distributed directorate, humanly known and applied. It is the old story of specialization vs. generalization. Each has tackled its job with community of interest, special knowledge, wisely directed experiment, and the like, and has done its job. Competent generalization can now come by affiliation of special successes and then you may watch for the fireworks of fair play with farm crops.

QUERIES AND REPLIES

Inquirer Must
Give Full Name
and Address

Postal Savings and Farm Loans.

To the Editor: If the government receives deposits from the people in the Postal Savings banks and pays the depositor 2 per cent interest and then loans it to the bankers at 2½ per cent interest, why can it not be loaned to the rancher at 2½ per cent interest? Federal authorities have acknowledged that one-half of one per cent is ample to defray the expense of the negotiation for loans to the Farm Loan associations. Does it not appear that the government favors the banker and not the farmer when it charges the farmer 5 per cent interest and the banker only 2½ per cent? And yet it is the farmer who makes it possible for the government and banker to exist at all. It would seem that bankers would do anything in the world for the farmer except get off their backs.—Subscriber, Lone Pine.

In the first place, there will probably never be enough in the postal savings banks to meet the demand for farm loans. In April last there was reported to be 115 millions in these banks. The applications for farm loans aggregated far more than that amount, and the prospect is that in future the postal savings will be in constantly diminishing ratio to the amount demanded for farm loans. We do not know how much there is now in postal savings banks, but it is probably only a fraction of the amount of April last. The depositors like the security of the government even at 2 per cent; have they not preferred the same security at 3½ per cent, as it was offered to them in the liberty loan? We presume so. Another reason why they liked 2 per cent on their savings was because they could get the money at any time to spend or to re-invest, and the reason why the government could only get 2½ per cent from the bankers was because the government could call in the money whenever the depositor demanded it. Money loaned on long-term farm mortgage bonds cannot be recovered on demand, and, though Uncle Sam carries a fairly large coin sack, it might bother him some to loan money on long terms and agree to pay back savings bank depositors on call! The fact is, Uncle Sam has to have other people's money for long-term loans for farming purposes just as he has to fight the Germans, and in arranging for farm loans he has to offer more interest than he needs to pay for what are more clearly recognized as patriotic purposes. Whether they are really more patriotic may be disputed, but the fact that most people think they are, settles that question. It seems that the least interest which will bring other people's money for farm loans is 4½ per cent.

As for slamming the bankers, we do not mind doing that ourselves when we think they need it, but it is only fair to remember that bankers as a rule do not handle their own money. They are handling other people's money, and they have as much trouble satisfying the demands of their customers as other business people do, and when they fail to do this their customers sell the use of their money in some other way or blow it into wild cats. It is the owners of the money who say what shall be done with it, not the banker who handles it, even though he does, as a rule, charge too much for handling it. In spite of this, however, the banker does not arbitrarily fix the interest rate. He is always operating between two forces—the owners of the money and the borrowers of it—and it is his business to buy the use of the money as low and sell the use of it as high as he can. In the essence of it, it is as unreasonable to place the weight of the blame on bankers as such, for a gen-

eral financial condition, as it is to swear at the station agent for an extortionate freight rate.

Slitting Bark of Fruit Trees.

To the Editor: I am thinking of slitting my young sugar prune trees from the graft up to where the shoots come out. I have been told it will prevent sour sap and help their growth. I have slit a few and they have opened up a quarter of an inch. Do you think it would be a benefit to them?—M. D. C., San Martin.

It is about as rational as to slit a cow's tail to cure "hollow horn" and belongs to the same period of agricultural darkness. We are willing to concede that there may be cases of old, neglected or unthrifty trees, the outer bark of which sometimes becomes very hard and tightly drawn, where a shallow slitting (just through the outer bark) may enable the tree to respond to better growing conditions which may be furnished to it. We have never been quite sure of this, but are willing to grant it. But this is reasonable as compared with slitting the bark of a young tree for which we can see no reason nor excuse. As for sour sap, it is due to too little sap in circulation, from one of several causes, and slitting would tend to aggravate rather than cure the trouble. Of course a healthy tree will heal over a wound, but that is no evidence that it is better for being wounded.

Berries For a Dust Screen.

To the Editor: I have grapes and almonds interplanted, the outer row of trees about six feet from a fence. I am thinking it would be advisable to plant near the fence between the almond trees, which are twenty feet apart, two or three blackberry or loganberry bushes. Would these spread out so that it would prevent my cultivating properly between the trees and the fence? And would it be necessary to put water on the berries several times through the season? My object in planting the berries would be to keep the dust coming from the road upon the grapes. Last year there were three rows of grapes along that strip that could not be used because too thickly covered with dust.—J. C. A., Stockton.

If you plant a non-suckering berry like the Loganberry, you can train it flat against the fence and not reach out much below ground. It will be easy enough to prune back the top growth as you desire. To act as a dust screen you need plenty of large leaves, and it will require water to get them. The Himalaya berry is worth consideration for your purpose, because it is such a free grower and the old wood keeps active in fruit and foliage—not requiring removal of old wood as the Loganberry does.

Summer Pruning Bartlett's?

To the Editor: Kindly advise regarding the summer pruning of Bartlett pears.—V. P., Owensmouth.

On young Bartlett pears which are now growing vigorously and will have plenty of moisture to continue growth late in the summer, pinching of tips of new growth can now be done to induce lower growth of laterals and check the disposition of the variety to sky-scraping. Under ordinary conditions, however, such treatment is not applied, but the young tree is usually allowed to make all the growth it will, to be shortened at the winter pruning. Summer pruning of bearing trees consists of cutting out blight continually, as it manifests itself. Theoretically, summer pruning of bearing

trees is available as a method of hastening or increasing fruiting, but we are not aware that anyone is doing that regularly in commercial orcharding, nor that it has been demonstrated to be desirable.

Summer Care of Sour-Sapped Trees.

To the Editor: I planned to plant a few squashes in my young peach orchard in which some trees are going back from sour sap. I planned to irrigate the squashes a little. But now I am afraid that irrigating the squashes may increase the sour sap injury and prevent the trees from recovering. Is that the case?—A. E., Stockton.

It is not. Too much water in winter is not cured by too little in summer, and injury to top growth by frost in spring is not compensated for by hardship to the roots afterwards. The only chance the trees have to recover from winter and spring injury lies in your producing the best conditions you can for summer and fall growth. The squash cover will cool the ground and reasonable irrigation given them will help the trees.

Non-Bearing Grape Vine.

To the Editor: I am sending the blossoms of my grape vine, which is five years old and has acted this way every year. I have put sulphur on it and have sprayed it for the last two years. Will you kindly advise me what to do for it?—F. C. B., Angels Camp.

Your vine has only staminate flowers. For lack of pistils in its imperfect flowers, it can never bear fruit. It is rather unusual to encounter such a vine, but it can hardly be counted rare, for some wild vines have that habit and seedlings may have. Your vine is therefore grown from a cutting of such a vine or a seedling which shows that variation. You can do nothing to change its habit, but you may graft a fruit bearing vine upon it.

A Question in Fruit Thinning.

To the Editor: When apple and pear trees are fruiting heavily on one side, with nothing on the other, and spurs carrying three to five fruits, would it be good practice to thin out these spurs, or would it be better to allow them to remain to the extent of the tree's capacity to make good size fruit, according to one's best judgment?—E. G., Berkeley.

If you are quite sure that the fruit a tree carries will reach good merchantable size without reducing number of fruits, thinning should not be done; but if you are not quite sure, reduce the clusters, but leave a few trees unthinned as a check on your judgment.

What Are Small Potatoes Worth?

To the Editor: Please to tell me what small potatoes are worth to cook for pigs when feed-stuff sells at the following prices: Bran per pound, 2½ cents; rolled barley, 2¼ cents; cocoanut, 2 cents; milk, skimmed, 5 cents a gallon.—H. P., Santa Cruz.

If well matured and sound, they may be, roughly speaking, worth half a cent a pound—less the cost of cooking.

Cutting Back a Cherokee Rose.

To the Editor: I have a Cherokee rose which I wish to cut back so as to train somewhat differently. When shall I cut it or will it make no difference as to what time of the year it is done?—L. D. H., Lakeside.

You can cut back considerably at any time without injury. Very severe cutting should be done after the leaves fall.

Fig Leaves Falling.

To the Editor: Can you tell what causes the fig leaves to fall off at this time of year? The trees are large and in rich bottom land of Russian river.—E. J. N., Cloverdale.

We know of nothing which would cause such a spring drop of leaves but frost. Have you had any? How do vines at the same level behave?

California Weather Record

The following rainfall and temperature record is furnished the PACIFIC RURAL PRESS by the United States Department of Agriculture Weather Bureau at San Francisco for the week ending at 5 p. m., June 19, 1917:

Stations—	Rainfall Data.		Temperature	
	Past Week.	Seasonal To Date.	Normal To Date.	Data. Max. Min. m.
Eureka	31.36	45.84	60	44
Red Bluff	19.26	24.95	106	60
Sacramento	12.95	20.09	106	54
San Francisco	15.78	22.27	87	46
San Jose	12.03	16.79	94	46
Fresno	7.25	9.63	103	60
Fresno Obispo	23.03	20.51	116	46
Los Angeles	15.26	16.44	106	54
San Diego	10.13	10.01	84	56

Gumming of Plums in the Foothills.

To the Editor: Two years ago last fall I started painting the larger wounds and pruning cuts on my young Hungarian plum trees—doing five or six rows on one side of the orchard, and after some delay working from the other side toward the center—but I did not complete the job that year. The neglect of these trees in the center has been apparent ever since. I lost more trees and limbs there from gummosis than elsewhere, although some of the treated trees were on ground with much poorer drainage, which lowered the condition of the trees.

I have since cut out all the diseased bark I could find, disclosed by a bit of gum, and treated the wounds with Bordeaux paste during March and April—the earliest being best. This treatment is in line with recommendations by Prof. Fawcett for treatment of trees afflicted with fungous diseases. I have also sprayed in November with lime-sulphur and painted the wounds, using asphaltum dissolved with linseed oil and distillate.

The condition of the trees as to

gumming this spring is a considerable improvement over last year, which I credit to the accumulated preventives.

I propose this fall to spray with Bordeaux mixture and follow that up with a crude oil emulsion to hold the fungicide, and waterproof small abrasions in the bark, also a further painting of the wounds with asphaltum paint. If this plan is not correct theoretically, I would like to know it.—Walter Egbert, Colfax.

[You are surely "exercising due diligence." The only question we see about your procedure is whether it is necessary to assume the cost in labor and materials of the multiplied treatments. In using the crude oil emulsion you must, of course, be sure you get a real emulsion and continue agitation to avoid collection of free oil. Theoretically, we should expect the oil to hold the bluestone so fast that it could not dissolve out for action.—Editor.]

Suggestions on Pruning Thompsons.

To the Editor: I have five acres of two-year-old Thompson seedless vines. They made an extra strong growth from the first, so this winter I left one or two (not more than two) canes on the strongest of the vines, from two to four feet long. I have them on a wire about two and a half feet from the ground. They are starting a vigorous growth and putting on a very heavy crop of blossom buds. I can count from ten to as high as forty bunches of buds per vine. Is such a crop apt to be too much strain on such young vines? Or will they be all right if I go over and pull off all non-fruiting shoots and pinch the others? Or should I pull off the weaker of the fruiting canes?—G. R. A., Modesto.

[Answer by Prof. F. T. Biolett.]

It would have been better if G. R. A. had left only one instead of two canes. He would have got just as much crop and of better quality. However, if the vines are particu-

larly vigorous no harm is done. He can cut off one of these canes next year and leave the other cane to make the permanent vine. It would be a mistake to remove one of the canes now, while they are growing vigorously. It would also be a mistake to remove any of the shoots, except those near the ground. He should let all the shoots grow whether they have fruit on or not. The growth of these shoots will strengthen the root system of the vine and provide abundance of fruit wood for next year. If the shoots grow very vigorously he might tip them—that is, pinch off a couple of inches from the end of each shoot when the shoots are two or three feet long. This will protect them from the wind and force them to produce laterals which would be good fruit wood for next year.

Whole Dried Apricots Reduce Labor.

(Continued from first page.)

days in the rush of the season, Mr. Silliman needs 50 extra hands which he ordinarily cannot get; and surely will find unavailable this year if he dries the crop rather than selling to the cannery.

MARKET PROSPECTS GOOD.

Before organization of the prune and apricot growers, Mr. Silliman could not advise drying whole; because packers would not undertake to market them. Some refused to take them at all or even to include a few boxes in their carloads for their eastern representatives to distribute among their customers to get their opinions. Finally, one packer's representative sent some to San Fran-

cisco where Mr. Silliman happened to be in the office when an Eastern distributor came in. The Eastern man took eight or ten tons on the spot and called for more last year. If they could be sold for two-thirds or three-fourths of the price of halved apricots, it is thought there would be more food value per dollar and more money net to the grower.

Apricots are successfully dried whole, up to 2½ inches in diameter. Mr. Silliman sulphurs only to sterilize which is imperative; but not to bleach the fruit. It takes twice as long to sulphur, but a tray holds twice as many. It takes twice as long to dry the fruit, but the yard holds twice as many. To test whether sulphur has penetrated deep enough, cut through the fruit. The larger and greener the apricot the slower sulphur fumes penetrate. One apricot too green for the canner was dried successfully.

In a half-apricot, sulphur penetrates only one-third to one-half as far from the skin side as from the pit side. If taken out when it lacks one-fourth of the thickness of the flesh of getting clear through, it will finish penetrating after six or eight hours in the sun. In sulphuring

whole apricots the sulphur should be half through the flesh before laying fruit in the dry yard. Mr. Sill-

man has tried drying without sulphur, but the dried fruit ferments and sours.

ANDERSON COMBINATION DIPPER, PERFORATOR, GRADER AND SPREADER

Send for new CATALOG of Packers' and Dryers' Machinery.

The ANDERSON COMBINATION DIPPER, PERFORATOR AND GRADER is built in the Santa Clara Valley, where the requirements of prune growers have been carefully considered and every possible advantage incorporated into the machine. Can be furnished with or without rinse tank. Made in various sizes for hand or power.

SEND FOR 1917 CATALOG.

It illustrates and describes the entire Anderson-Barngrover line of Fruit Packers and Dryers' Machinery. A copy will be sent free to all who are interested. A post-card will bring it.

Here and There in the Fruit Business

[Written for Pacific Rural Press.]

Orange Fertilizer Should Be Balanced.

"One of the scrubbiest orange orchards in the colony," is the way F. R. Irwin describes the condition of his twenty-year orchard fifteen years ago. Now he thinks it about the best. The crop from a scant nine and one-half acres last year netted him \$2,000 and was all off for the Christmas trade or earlier.

The Irwins until the past three years hauled manure to this orchard whenever the team was not busy. When they couldn't put it into the orchard they dumped it in the coral and spread it later. The trees were heavily manured, but it became noticeable that the fruit was rough, oversized, late, sour and coarse.

In the past three autumns the manuring has been lighter and a commercial fertilizer containing 5 per cent potash has been spread ten to fifteen pounds per tree in a band three feet wide and at least three feet away from the trunk. Winter rains soak it in, and the quality of fruit has improved. Plenty of manure is good for oranges, believes Mr. Irwin, if it is balanced with potash and

Lime for Split Figs.

Split figs are probably not due to overpollenization, think G. P. Rixford of the United States Department of Agriculture and Henry Markarian, one of the most experienced fig growers of Fresno county. Some fig trees in the midst of a bunch of capri trees do not have split fruit. But Mr. Markarian says split figs are due to soil conditions and late irrigation. They should not be irrigated after July 15, but should have plenty of water in the soil then. Mr. Rixford, however, points to orchards where trees on ditch banks have no more splits than the others.

The best remedy Mr. Markarian has found for split figs is hydrated lime, three tons per acre for quick results. Until the year before last some of the trees bearing biggest figs lost their crop by splitting and souring so that the juice ran out and stuck to the trees. Among these, where he drilled in one and a half tons per acre of lime and then cross-drilled as much more, he got less than 5 per cent of splits.

Uses Screweyes in Wiring Trees

In the Pacific Rural Press of May 6 a very good system of wiring trees

was given. Here is another: Fasten screweyes directly into each limb at the point from which you wish to extend a wire and use bale wire from it to another screweye in another limb on the opposite side of the tree. The limb on one side of the tree serves as a counter-balance to the one on the other. Use iron screweyes and screw in so that a straight pull is given on them by the wire. Iron does not hurt trees, as I have known cases where nails were purposely driven into the trunk of trees because the tree needed iron. Many acres of citrus trees have been wired for several years past at Fullerton. I have noticed walnuts wired this way around Ontario and quite an acreage of apricots are wired this way at Hemet. In about three years the bark of the tree will almost hide the screweye.—C. F. B.

Santa Clara Fruit Prospects.

While word is passing around that Santa Clara County has the biggest prune crop in years, it is not so easy to find it on the trees. Imperials generally are well set, weather having been better for them about blooming time than for the French. Blenheim apricots which are the principal variety, were so badly hit by frost and fungus about blooming, that it is hard to see half a crop, though some orchards are loaded. In some instances Hemskirks and Moor-parks are set heavier than Blenheims. Peaches appear to have set a heavy crop. Some orchards are already propped. Cherries are mostly gone. Pears promise a splendid crop in most orchards.

Disked Olive Cover Crop.

Dr. Rearden of Butte county got full benefit of the thick bur clover cover crop in his olive orchard this year. When seen last May, there was a thick mat of it all over the ground, turning yellow. The trees were very vigorous, in fine color, and almost every branch and twig full of fruit buds. The orchard had recently been irrigated, for the doctor has plenty of water, small furrows three or four feet apart having been made last fall. The orchard is not plowed, according to F. R. Irwin, who takes care of it. As soon as the ground was dry enough, it was to be disked, and after irrigations a month apart.

Mr. Almond Grower:

You can reduce the cost of your own hulling fully 80 per cent, and hull your neighbors' almonds at a profit of \$20.00 per ton with this wonderful machine.

The Read Almond Huller and Separator

will hull and separate almonds—quick and clean—at a cost of only \$5.00 A TON.

The hand method costs from \$25 to \$32 a ton.

No wonder one owner says, "it would be impossible to do without it."

Let us send you our literature describing it, and telling what other owners say about it. Would ask that you get your order in early, so that you will not be disappointed in delivery, as we are behind in filling orders in all our departments, and will be for some time to come.

Write now while you think of it. Address,

Cantaloupe Picking System Increases Crop.

[Written for Pacific Rural Press.]

Lots of people do not have cantaloupes up to the last of the season because they walk on the crowns to pick the first and second settings, but George D. Mead of the Turlock district has a beautiful yield of fine melons right up to frost, beginning in mid-July in an ordinary season. In his first year, with hired pickers, he suffered like the rest, and it was a sorry looking patch when the rush was over.

The reason his late cantaloupes mature is that shortly before picking begins he trains the vines so there is a path between each row. As the "crown set" is still too far to reach from the path conveniently, he makes the rule that pickers must not lift their feet off the ground among the vines, but slide their toes under the vines till they can reach the melons. The vines must not be picked off the ground any more than this requires. Since his family have been helping, it is not hard to enforce the rule, and it is not particularly more work to pick that way.

TELLING THE RIPE ONES.

The curl does not always tell whether a cantaloupe is ripe enough. But there are cracks about the base of the stem when it is ready to pick for Eastern shipment, and it comes off with a little pressure of the thumb, leaving a smooth "cup" in the melon. If too green, sharp pieces of the stem will remain in the cup. The netting on an unripe melon is flattened, but when it has sugared up and ripened enough the netting will be full rounded clear up to the stem if there is any netting that far.

There seems to be several distinct settings, though blooming is continuous. There is seldom more than one ripe melon on the same branch

in the Mead patch, and it is the one nearest the crown. The last melons to pick are those next to the path. There is usually a shoot from the same point of the vine where a cantaloupe joins it. This shoot is a foot or two long when the melon is ripe, and has buds for the next setting.

PICKING CANTALOUPE RIGHT.

Picking begins as soon as it is light enough to see; for they should be kept as cool as possible. There is very little dew at that season. The whole patch is picked once a day. Every ripe melon is picked, even if overripe; for the first season's experience seemed to show that overripe melons rob those maturing farther out on the vine, and they do not drop off, as the Meads expected the first year.

The stem is pressed off with the thumb before picking up the melon. The fruit itself is handled carefully all the way through, for bruises show up after shipment and knock off more than their proportional value from the whole crate. Such picking avoids bending the vine sharply, which would affect the melons farther out if it does not kill them.

DRIVEWAYS CROSSWISE.

Owing to the Mead System of laying off driveways crosswise of the rows and frequently enough so the picker's sack is usually full when he arrives at a drive, there is no walking across rows to empty the sacks into the field crates. There is no lost time; for as soon as the bag is emptied, the picker proceeds on the same row in the next block.

Right after breakfast, the melons are hauled to the shade to be packed. The size of crates and the number of cantaloupes for each size are fixed by the State standardization law.

Dries Out Brush Roots to Kill Them.

[Written for Pacific Rural Press.]

In clearing and planting the cut-over redwood land of Humboldt county many farmers have found it necessary to leave the redwood stumps in, until they can get capital to blast and drag them out. Much acreage is profitably farmed among the stumps, but in the first and second years there is often serious difficulty with the brush roots of timberberry, briars, etc. These hold the land so loose that it can scarcely be packed enough to grow crops, and where cultivated the season after being cleared of the brush the roots sprout and have to be cleared out again.

Lack of help and capital did Pete Philipsen a good turn last year. The four and a half acres that he finished clearing of brush June 17 was simply plowed and harrowed twice

and sowed partly to bald barley and partly to oats. The dry summer killed the roots so they rotted last winter and spring. No underbrush has grown on this piece, and it will be in good shape for cultivation next year. The barley and oats volunteered this spring. The barley was cut late in May, but the volunteer oats on June 8 were standing close to six feet tall, a pretty good stand, still green and growing, though headed out.

On another place, Mr. Philipsen had previously cleared the land and cultivated a crop the following season. Brush grew rankly.

So on the two and a half acres cleared recently Mr. Philipsen is doing intentionally what he had to do on the four and a half acres—letting it dry for a season to kill the roots.

LIFTER GUARDS FOR LODGED GRAIN.

To the Editor: In your last issue W. H. W. of Turlock asks about the best method of harvesting lodged grain. Having been a grain farmer myself in former years, I had to meet this difficulty occasionally. In my experience I found the most satisfactory results obtained by putting lifter guards on my header about 18 inches apart on the sickle bar. They are made of spring steel to be flexible and extend forward of the

sickle bar about 15 inches and return with an upward curve. They lift the lodged grain so the knives can cut under it. Any blacksmith can make and attach them.—J. W. Ryce, Selma.

MILO ON HARD LAND.

"I sowed milo on hard land in July six years ago and got a fine stand," says Frank Hasper of Imperial county. "I sowed it like barley and flooded right away. Murky, hot weather followed, as usual."

The U. S. Weather Bureau during the crop seasons furnishes special weather warning services and infor-

mation to growers of corn, wheat, rice, sugar, tobacco, alfalfa, apples, pears, peaches, grapes, etc.

Field and Garden Suggestions

[Written for Pacific Rural Press.]

Strength of Nevada Alfalfa.

It is claimed by many that the alfalfa raised in the Fallon district contains from one to two hundred per cent more food value than that which is raised elsewhere. The general average is about five tons per acre per season, but where care is exercised in preparing the land the yield runs considerably higher.

On the L. A. Beckstead ranch, south of Fallon, twenty acres yielded 150 tons last year, it being three years old at that time. Mr. Beckstead was formerly in the dairy business, but owing to the pressure of other duties has been selling off most of his stock.

The writer was very much surprised to find on this ranch the Holstein bull, Prince Gelsche Aaggie Walker, a son of the famous Prince Gelsche Walker, who was recently purchased by the Santa Anita Rancho for \$12,500. Mr. Beckstead's bull has been fed on alfalfa only for the past two years and is in very good condition.

Mr. Matley's herd stud, Matineux, who was Reserve Champion at the P.-P. I. E., has also been fed on alfalfa for the past two years and is looking extremely good at the present time.

Velvet Beans Available.

Samples of velvet beans, such as are grown with corn in Georgia, are available for distribution. These beans need warm nights and a support like corn to hold them up. They are planted in the corn and ground up with the stalks and corn into a practically balanced feed. The Williams' Patent Crusher and Pulverizer Company of San Francisco will send samples of the seed to farmers who will take care of them and report results. Planting them during the later cultivations may practically double the feed produced per acre.

The Bluepod Bean.

The bluepod is an early-maturing, heavy-producing, small white bean produced or worked out from the or-

dinary, old-time crop of small whites. The bluepod is most generally grown from Ventura to San Luis Obispo counties, in the coast regions. It was originated in Santa Barbara county.

Mr. H. C. McCabe of Lompoc, Santa Barbara county, tells about noticing in his crop of whites a few years ago certain bean plants that had a bluish cast to the pod, and almost invariably were early maturing and heavy producers. It was from these blue pods that he selected his seed each year until a permanent grade was established, which today is called the bluepod.—Chas. Barnum.

Sowed Alfalfa in July.

Alfalfa has been sowed successfully in late June or early July in Imperial Valley. Frank Hasper irrigated and planted some corn on "soft" light land in June. The corn grew knee high on that irrigation. Then he sowed alfalfa and irrigated right away; for "baby" alfalfa cannot be irrigated here on account of the sediment left by irrigation water. Three or four weeks later the alfalfa had five or six leaves, and it was irrigated again. That crop went to seed. The corn was cut in September and cattle turned in. The field was disked in October. The corn grew again next spring, and alfalfa made as pretty a stand as could be wished.

Dangers at Potato Harvest.

Two serious potato troubles will afflict growers who are not careful in harvesting. The fungus causing watery rot resulting in "leaky potatoes" is widely distributed in the soil and will affect potatoes with which it comes in contact if their skins are broken or punctured. Keep injured tubers separate and dry the injured surfaces quickly. The tuber moth lays eggs on piles of potatoes exposed in the field overnight. Worms that hatch from the eggs bore the potatoes in every direction. Cover potatoes left in the field over night with sacks.

Garden on Fruit Ranch.

One of the biggest orchardists in the Vacaville district has a garden which is a "big help," for it provides early vegetables fresher than they can be bought, and the work required is done evenings. Last spring they had peas from the middle of April on. When the peas were gone they were followed with watermelons. Several messes of beet greens about May 1 cost nothing, for they had to be thinned out anyhow.

Water Kills Star Thistles.

Star thistles are killed in Tehama county by watering them in July or August. B. M. Brown tells how he has killed a number of patches. This spring he was ditching to a grain field to get some more of them.

All that is necessary is to soak the ground from the surface downward, and keep the surface wet for 24 hours. This sours the roots, and within 10 days you can pull out the roots, but their bark will be left in the ground.

Subsoiled Orchard Too Much.

Subsoiling 24 to 30 inches deep at intervals of six feet in the centers of peach trees set 24 feet apart in

deep, loamy soil, fifteen years previously, killed the trees, as told us by Frank Watson of Butte county. Eight animals on the subsoiler twist-

ed it out of shape, cutting the big roots, and the trees, which were not in the best shape, could not stand the shock.

Each Hour's Recreation Is 60 Minutes' Comfort In B. V. D.

FEELING hot is a state of body first, and a state of mind afterward. When you put on B. V. D. in the morning, its cool, clean touch helps take your mind off the heat, as well as the heat off your body. You're at your best physically and mentally.

In our own modernly equipped Cotton Mills at Lexington, N. C., the fabric from which these Loose Fitting B. V. D. Undergarments are made, is produced in a scientific manner from selected cotton to insure durability in wash and wear.

In our own B. V. D. Factories the garments are skilfully cut, strongly stitched, accurately finished—to fit and to be cool and comfortable all day long.

TEPARY BEANS

NOW is the time to plant Tepary Beans. When in doubt, plant Tepary Beans. In any kind of soil, plant Tepary Beans. If you cannot irrigate, plant Tepary Beans. If you would prove up a homestead, plant Tepary Beans. If you want quick results, plant Tepary Beans. If you want the early buyer, plant Tepary Beans. If you have one, or one hundred acres, plant Tepary Beans. If you would reclaim raw land, plant Tepary Beans. Price 30c per lb., or \$25.00 per 100 lbs., f. o. b. Los Angeles. If you want a sure crop and big yield, inoculate the seed with Nitrogen Bacteria at a cost of about \$1.00 per acre; it is equal to \$40.00 worth of fertilizer.

Mechanical Power on the Farm

Users of tractors, engines, pumping plants, motor trucks, automobiles, electric motors, and other mechanical farm power are invited to make this department an exchange of their experiences and troubles.

PUMP PERMITS ORCHARD ALFALFA.

[Written for Pacific Rural Press.]

E. F. Haven's pumping outfit on ten acres will pretty soon pay for itself by irrigating a neighbor's 25 acres in the Winters district of Yolo county; and at the same time permits Mr. Haven to grow good alfalfa in his apricot orchard without injury to the trees.

When Mr. Haven came from the East over four years ago, he noticed a neighbor's 10-acre orchard planted to alfalfa. Every year he noticed that the neighbor got as good apricots, and as many per acre as he did with clean cultivation. His neighbor got alfalfa extra, and avoided cost of cultivation, as well as injury to the tree roots, which continued to grow in the rich surface soil.

So last fall Mr. Haven seeded about five acres of orchard with 12 pounds alfalfa seed per acre, and this spring had nice alfalfa on most of it early in May.

The orchard with alfalfa requires more water, lack of which would be disastrous. The centrifugal pump run by 10 h. p. electric motor, however, furnishes plenty at the rate of 150 gallons per minute. It took four days and a few hours to irrigate the 10 acres, including the orchard and alfalfa.

POTATO CROP DUE TO PUMP.

[Written for Pacific Rural Press.]

A pump to irrigate potatoes proved to be a very profitable necessity for E. O. McClure in 1916. He lived in the Modesto irrigation district where ditch water was available only once every five weeks; and then in such a body that to use it on his one-third acre would have covered the plants, which must be avoided. Besides, potatoes must have water when they need it, to make good tuber growth.

A 3½-inch pump run by a 7½ h. p. motor delivered about 35 inches of water from the domestic well whenever it was needed.

TWO CROPS OF POTATOES.

Along in March, Mr. McClure planted two sacks of white rose on

the one-third acre. He dug 30 sacks of salable potatoes and used all but two sacks. These were planted August 1 on the same ground after flooding it. They were irrigated and cultivated every two or three weeks after the potatoes set; and 47 sacks were dug, which sold for \$118 at \$2.75 per cwt.

GRINDS LIME FOR FARM BUREAU.

[Written for Pacific Rural Press.]

Not all of Humboldt county farms need lime, though about 1,000 tons per year have been used through the Farm Bureau for the past three years, according to Secretary R. W. Werner. Farm Adviser A. H. Christiansen located a ledge of limestone back in the mountains where it could be obtained cheap in summer, but not at all in winter. A steam engine and grinder were put in by H. C. Andersen with capacity of about 10 tons per 16-hour day. Farmers haul it to their farms through the summer and apply it in spring or fall. When supply gets ahead of demand, the ground limestone is put into bunkers of 400 tons capacity at Rio Dell, where it is available any time. The Farm Bureau attends to the storing and distribution.

MILKS WHILE SEPARATING.

[Written for Pacific Rural Press.]

Twenty dollars from each of nine cows for April butterfat, besides the fresh skim milk kept on the ranch to feed purebred Poland Chinas, sounds like prosperity for Nate Hauck of Alton, Humboldt county. When we saw him in June, he was separating about 450 pounds of milk daily, taking 25 minutes morning and evening to do it. But the separating was not the long grind it used to be, for a ¼-horsepower electric motor has been installed to run it at a more constant speed than he used to be able to do by hand, and Mr. Hauck can milk while the machine is separating.

PIPE SIZE TO CARRY WATER.

To the Editor: I have a 5-horsepower motor and 2½-inch pump (capacity 250 gallons per minute), with 4-inch discharge. Puts water into concrete sump 4 feet high. Will a 6-inch concrete pipe carry this to a point 300 feet away, where the surface is 2 feet higher than at the well?—C. D., Acampo.

Due to the loss by friction, this quantity of water delivered under your conditions will keep your sump practically full and it may be well to add a few inches to the height of its sides to prevent possible overflow.

Mechanical power must fill up the gaps left by the withdrawal of men and horses from the ranks of the Agricultural Army.

What Is the Matter With the Farmer?

To the Editor: I thank Carl Baum for his answer, in your issue of June 9, to my article, but he has not changed my views. I can agree with him that we have made amazing progress along certain lines but the main thing of all, the very foundation upon which everything depends—co-operation in the buying things and in selling of his farm products. There will be no change until the farmer puts his foot down and says "we have got to get one big man and one big organization that will embrace the farmers of the whole State." The green farmer is pitted against a man who understands his business, with the result that he always comes out on the losing side. Very few writers really know the farmer. Writers are generally men that have been successful; they associate with successful men. In all neighborhoods where I have lived fully half the farms have been owned by old people. Probably they started in full of hope, but years slipped by and their land has become impoverished until it's nip and tuck to get even a poor crop. They have seen the town banker, the storekeeper, the commission man and others wax fat from the products of their farm, and they see no way out. They become soured. Such people will oppose any movement. I know of men who will fly into a rage at the very mention of our "Farm Adviser," although they have never met him. There is but one possible way in which to transform such men, and that is by proving to them that their neighbors are selling and buying better than they do. It's useless to appeal to them in any other way.—Chas. Blom, Napa.

Speeding Up California Lands.

To the Editor: We all know that irrigated land in small farms in Southern California can and will raise two crops; and, if properly handled and timed, will produce five crops in two years. Of course, it takes work, water and fertilizer, with a lot of head thoroughly mixed in. It is evidently far from a gen-

eral practice, partly from lack of knowledge of what can be done under the conditions here, and most farmers are satisfied with one crop and that half cared for. Now, if the Eastern farmers can get a profit out of land worth \$200 to \$250 per acre with one crop of grain, and that not always one hundred per cent, why can't a man on ten acres here, by doing practically all of his own work, and no winter feed and fuel bill to pay, have a pretty fine thing of it and not hurt himself, either? He can use two acres for house, outbuildings, orchard, garden and grow alfalfa enough for one good horse, one cow, pigs and chickens. Then he will have eight acres for continuous cropping, with tomatoes, cabbage, beans, sweet corn and many others to choose from in their best seasons. His land should not be idle a minute.—T. M. Edmondson, Los Angeles.

Too Much Advice to Farmers.

To the Editor: I have been reading letters written on the labor questions both pro and con, mostly by labor leaders and Mr. Lubin of Sacramento, assailing the farmers for living conditions on the farms, wages, etc. But I still have to read my first letter written by a farmer or to hear a speech by a farmer telling Mr. Lubin that he shall pay so much to his clerks and shall sell his wares for such a price. In fact, they consider that Mr. Lubin's own business, but whenever he gets a chance he pokes the farmer on all sides. He never tells of what he pays his help or he never has spoken of his arduous task of giving his employes a shower bath every night and tucking them away safely in their little beds. I would suggest that Mr. Lubin buy a ranch, if he does not own one, and fix everything up fine with Brussels carpets, good beds and bedding, etc., and after one year take an inventory and report how much he has left; that is, if he uses transient labor as the balance are forced to employ. The ranchers are law abiding citizens and do not wish to be ruled or ruined.—B. M. Coe, Bogue.

"The Schmeiser Way Makes the Farm Pay"

Layne & Bowler Corp.
Los Angeles, Calif.

Gentlemen:

When looking for a good pump I at first decided that the price of the Layne & Bowler pump was too high. I installed a cheaper pump of another make. After using it for eight months I discarded it for a Layne & Bowler pump, which with the same power, lifts one-third more water than did the cheaper pump.

I certainly recommend the Layne & Bowler pump to any one wanting an assured water supply at the least expenditure of power and expense.

Very truly yours,
John F. Withers

SAN FRANCISCO. LOS ANGELES.

General Agricultural Review

Field Crops.

Barley hay is selling for \$20 and \$21 baled in Pomona.

A new cannery is to be built at Santa Clara.

The first carload of cantaloupes to Eastern markets went out from Imperial Valley last week.

The Oroville Register says the Ehmann Olive Company is to double the size of its plant.

Two hundred and ninety-eight thousand acres are included in a proposed Kaweah irrigation district.

Heavy frosts have damaged large crops of beans, corn and potatoes in Trinity county. The temperature fell to 27 degrees last week.

The area planted to watermelons in California is estimated by the United States Department of Agriculture at 3,600 acres.

C. W. Jenkins of Sutter County notes that an ordinary corn planter is allright for tepary beans, but the plates are so thin that they crack blackeyes.

Plans for the expenditure of nearly \$1,000,000 at Hueneme, sixty miles north of Los Angeles, are being perfected by the McCrosky Packing Company.

Word comes from Salt Lake that there is an acute hay shortage in the inter-mountain district. The production this year will be only half of that in 1916.

The Oroville district announces that it will be a competitor for the honor of being selected as the place where California will make its initial experiment in State colonization.

Barley buyers have been active in Sacramento and vicinity, and some large sales have been reported at \$2 a hundred. The yield is exceptionally good this year.

The Pacific Pea Packing Company in Oakdale closed down after a month's run, having canned nearly a million and a half cans of peas, the biggest run in its history.

Growing crops of barley, hay and some wheat, covering some 400 acres, near Woodland, were destroyed by fire last Tuesday (June 18). The residence of State Horticultural Commissioner G. H. Hecke was entirely consumed. Incendiarism is suspected.

Grape sugar is beginning to assume a new aspect. Eastern buyers, through agents in Fresno county, are said to be contracting for large quantities at prices that will produce better returns than wine-making.

The potato situation in Southern California is highly satisfactory to growers. Up to the close of last week Los Angeles shippers were paying \$3.00@ \$3.25 per cwt. for good new potatoes. These prices are about double as high as last year's.

A fine paying crop of potatoes is reported from the Brack tract, in the Delta section northeast of Stockton. A large field of spuds produced 300 boxes of 65 pounds each, which sold for \$2.70 per box. The land will be irrigated and planted to beans at once.

Dee Kimura, the principal lettuce grower in the Imperial Valley who has just finished his last shipment East, says that the growing of lettuce in that section promises to become as important as the growing of cantaloupes. Only 435 cars were shipped this season, but next season shipments are expected to reach 1000 cars.

Geo. M. Cooley, president of the San Bernardino Valley Produce Association, says that instead of raising 25 per cent of the potatoes consumed, the San Bernardino Valley is raising a surplus this year of 300 cars of early potatoes, that are selling at \$3.55 per cwt. for shipment.

A grain gradingschool is being conducted by the Oregon Agricultural

College, designed to enable farmers, millers, and grain dealers to determine the classes and grades of all Northwest wheats, so that the milling and marketing values can be ascertained before the grain is sent to market.

A careful report by A. T. Spencer to Sutter County Horticultural Commissioner H. P. Stadler, shows that from Tisdale Weir to the mouth of Feather River, there were 16,000 acres of beans in 1916, which yielded 133,000 sacks; and that there are ready to plant 35,000 acres in the same district this season.

The Bureau of Crop Estimates has received reports relating to the condition on June 1, 1917, of truck crops grown for canning purposes. On the basis of 100 representing a normal condition, California's condition was: Beans (snap), 95; Corn (sweet), 90; Cabbage, 82; Cucumbers, 91; Peas (green), 88; Strawberries, 95; Tomatoes, 96.

Now that the bean planting season is over and bean growers failed to take all the beans in speculators' hands, and the consuming trade refuses to take many beans, in the Los Angeles market, at the high prices that have prevailed, holders are offering to sell limas at 3c lower than a week ago, and white beans 2c lower

and there is little buying at these declines.

America's 1917 wheat crop as forecast June 8 by the Department of Agriculture will fall far below normal, despite a prospect for a more than ordinary yield of spring wheat. A total yield, estimated at 656,000,000 bushels, will give the country 16,000,000 more than last year's crop, but with the heavy demand from abroad, and virtually no reserve store, it will not meet war needs, unless the country goes in for rigid economy.

J. M. Gerald of Calexico sold last week eighteen bales of cotton at 25c per pound to the New England Mills of Roxbury, Conn. The growing crop is very promising, the plants ranging from six to twenty inches high and is stooling out in good shape. Cotton raisers are refusing to contract their crop at 20c. Some are holding for the spot price of 25c, and even 30c is being talked of. It is said there are 124,000 acres in cotton on both sides of the border.

Citrus, Nuts, and Semi-Tropical.

Walnuts promise a good full crop in the Pomona district.

Difficulty in securing pickers and packers will delay the pack at Lindsay, and prolong the orange season until after the first of next month.

While the olive bloom was extra heavy in Lindsay this season, for some reason the fruit did not set to the trees as it should, and the indications are that the yield will not be as heavy as it was last fall.

If you'd thresh your Pea and Bean Crops at a profit, and so clean that they will bring an extra price, get a

THE STUDEBAKER CORPORATION
(OF AMERICA) 1637 SO. GRAND AVE.
LOS ANGELES BRANCH

GENTLEMEN:

We take this opportunity of expressing our belief that Zerolene, as applied to Studebaker cars, is one of the best motor oils, this based on our own and our customer's experience, and we have no hesitancy in recommending it to any one.

Very truly yours,
STUDEBAKER CORP. OF AMERICA,
Los Angeles Branch,
G. H. Bowman Manager.

Gentlemen:

In answer to your inquiry regarding motor oils used in Packard and Maxwell cars in this territory, I am glad to say that Zerolene has given us perfect satisfaction in both our pleasure cars and trucks, and in asking our customers, who have always used this oil, they give me the same testimonial.

Very truly yours,
C. M. Glessner

STUDEBAKER  **MAXWELL**

"proven entirely satisfactory"

Zerolene, "a most satisfactory motor oil"—that is the testimony of the leading automobile distributors of the Coast.

They know from the records of their service departments—and we know from exhaustive tests—that Zerolene, correctly refined from selected California asphalt-base crude, gives perfect lubrication with least carbon deposit.

Zerolene is the oil for your car—whatever the make—the oil for all types of automobile engines. For correct grade, get our Lubrication Chart covering your car.

At dealers everywhere and Standard Service Stations

STANDARD OIL COMPANY
(CALIFORNIA)

ZEROLENE
The Standard Oil for Motor Cars

Sufficient acreage has been signed up to assure the establishment of an olive-processing and olive-oil plant at Lindsay by the State Associated Olive Growers' Association.

Oranges will score a hundred per cent crop for the season of 1917, according to figures compiled by the California Development Board and the Southern Pacific Company.

It is announced from Monrovia that the shortage in shooks for orange boxes will cut a figure in the marketing of this season's Valencia orange crop. The late spring in the northwest and inability of lumber men to get into the timber early is the cause.

In the citrus fruit industry San Bernardino county leads, with Los Angeles, Riverside, Orange and Tulare counties closely following, according to the statistical report of the State Board of Horticulture.

Sootless orchard heaters are being tried out under the auspices of the Pomona Chamber of Commerce. If successful they will be generally adopted as a means of fighting winter frosts in the orange groves.

The intensely hot weather in Redlands Thursday and Friday of last week, while causing much discomfort, the thermometer reaching 112 degrees and hurting garden truck, cooked the scale on the orange trees and it is thought the heat did as much good as damage.

Shipments of citrus fruits by water from the port of Catania, Italy, during March, 1917, were 133,882 boxes, as against 43,682 boxes during March, 1916. Egypt received 104,030 boxes, against 7,900 in 1916; Saloniki, 23,798 boxes, against 7,760; and Great Britain, 6,054 boxes, against 3,115.

The Butte County Citrus Association, which ships only 8 to 1 oranges, returned net to the growers \$1.58 per box last season, and \$1.78 per box the year before. They also shipped out the first carload of Sunkist oranges from the State in 1916 on November 9, according to Sec. Oscar Warner and J. A. Lawrence, who was president then.

The packing houses in the Redlands district have finished on navel oranges, the few sweets and seedlings. They have started on Valencias and there are probably 1000 cars of Valencias to go forward. The cool weather held back the growth of the Valencias and they will mature slowly enough to permit packers to spread shipments over the next five months to the close of the orange season.

The Goleta Walnut Association made up of Goleta and Carpinteria growers expect to handle 1200 tons of walnuts this year. Last year they handled 743 tons. Growers in that district say that walnuts are maturing much earlier than last year and the sizes now are larger than a year ago. There is little blight and little trouble from aphids. The outlook is the best ever had.

Deciduous Fruits.

The apricot crop of Kings county is 60 per cent of normal, the peach crop 100 per cent, and the prune crop 100 per cent.

Eastern buyers are reported as doing business with the Prune and Apricot Growers' Association on a large scale, with orders for the 1917 crop piling up.

There will be 6000 tons of apricots in the Hemet Valley this year and the growers are receiving \$60 and \$65 per ton for the fruit. The crop is about 70 per cent of normal, says an exchange.

The Tulare Peach Growers' Canning Association has announced the prices of the crop sold recently to the California Packing Company at \$27.50 per ton for freestones, and Phillip clings \$50 per ton.

From statistics compiled by the State Board of Horticulture taken from reports furnished by commissioners of the various counties of the State, Santa Clara county raises 30 per cent more prunes than all counties combined.

The Earliana, a blue plum produced by R. Burton of Solano county,

has proved seven to 10 days earlier than Clyman, though smaller. Of eight baskets produced last season, six packed 5x6 and two packed 5x5. The tree is a vigorous grower.

The California Fruit Canners' Association plant in Visalia has determined upon packing apricots this year. There is a heavy crop about Visalia this year, and under present weather conditions it will be ripe by June 26, when packing is expected to be started.

W. E. Chanslor of Los Angeles has bought of Arthur E. Hull, the Hull ranch of 320 acres ten miles southeast of Victorville in San Bernardino County, for \$250,000. One hundred and thirty-five acres are in bearing orchard, one hundred acres in bearing five-year-old apple trees and thirty-five acres in three-year-old pear trees.

The sum of \$334,000 will be paid by the directors of the California Peach Growers, Inc., to the growers in the State. This will net the growers an average of 5 3/4 c a pound on 1916 peaches, according to grade of crops, and it is thought that when the entire crop is disposed of the growers will receive about 6 c a pound.

Grapes.

Owing to the shortage of sugar pine, the material from which raisin trays are made, there is a shortage of trays.

A largely increased pack of grapes will be made at the Visalia cannery of the California Fruit Canners' Association this year, it is reported.

Grape leaf hoppers have been giving vineyardists in Fresno county trouble, according to Fred P. Roulard, County Horticultural Commissioner.

Feeding made by the University at the University Farm at Davis shows that dried grapes may be successfully used to replace half the grain of the ordinary ration of hogs. They are best fed in connection with grain, alfalfa and similar feed.

The California Wine Association has taken an appeal from the decision of the Superior Court with reference to the suit against it by the Clovis Fruit Company. The trouble arose over the action of the Wine Association in refusing to accept wine grapes under old contracts in 1915.

At Dinuba it is proposed to form an organization to be known as the Valley Fruit Growers' Association to adjust the question of labor for the coming harvest. For picking grapes, the prices, 3c a tray for Muscats and 2 1/2 c for Thompsons, were favored for the coming crop. The cost of a membership is five cents an acre. There is an enrollment of over 7,000 acres.

PRUNE GRADER AND DIPPER (IMPROVED).

Last year F. J. Yandle of Santa Rosa, placed on the market an improved type of prune grader and dipper, which did very good work. Since then he has improved the machine, especially the heating apparatus. The oil burner this year is twice the size that of last season, being now 12x16 inches, burning distillate oil; the brick work is now built with a baffle wall on the back end, so as to spread the flame over the entire bottom of tank and up the sides of water line before entering smoke stack; and here is placed a super-heater, which supplies additional hot water all the time, with no extra fuel expense. The machine is automatic throughout and fully patented. First comes the dirt screen and leaf extractor, then the prunes pass into dipper clean, and are sufficiently scalded, then the dipper delivers them automatically on to the grader screens, which give three sizes and delivers them to the trays.

Since completing the machine, Mr. Yandle has taken into partnership with him, Frank A. Brush, the Santa Rosa banker, and they propose to push its manufacture and sale. Factory and sales headquarters will be maintained at Santa Rosa.

You know the difficulty of getting the roots of stumps out with pullers, by burning, or by using explosives that merely shatter. You need explosives that not only shatter but also lift and heave—that tear the roots and make clearing easy. You can save work, time and money by using

IANT FARM POWDERS

STUMPING — AGRICULTURAL

—made by a Pacific Coast company, with 50 years' experience, especially to meet Western agricultural conditions.

"Your powders shoot the roots and spread wide in the ground instead of going down. They are the best we have used," says G. S. McCartney, Russellville, Ore.

There are two Giant Farm Powders—Eureka Stumping Powder, for dry work, and Giant Stumping Powder, for wet work. Test them alongside of any others. Write us and we will have our nearest distributor supply you—at lowest market prices—with a trial case that will prove to you the economy of using Giant Farm Powders.

Five Valuable Books Free

Developing Berkshire Pigs for Breeding.

[Written for Pacific Rural Press.]

When the American Berkshire Association decided to maintain a view herd at the Panama-Pacific Exposition, they chose John F. Myers to take charge, because Mr. Myers had proved his ability with Berkshires by raising an average of eight pigs per litter during the five years he had raised them for himself.

When, after the Exposition, the association decided to maintain in the field a diagnostician of the obscure troubles due to the faulty feeding, breeding, or equipment, they chose Mr. Myers. He had been successfully doing the same kind of work privately before the Exposition. For a year he went wherever called in eastern and central states; and showed many breeders the cause of unthriftiness in their pigs. But lack of finance discontinued this field work of the association in 1917. Then members of the Western Berkshire Congress asked Mr. Myers to visit their various ranches long enough to get their feeding systems on the best basis, and to show wherein their equipment and breeding could be improved economically.

STRIKING REMARKS BY J. F. MYERS.

Feeds in California are as fine as anywhere in America, except where we lack green pasture, alfalfa, etc.

Ground barley is practically equal in value for hogs to Indian or sorghum corn, if fed with something else.

Skim milk is worth, per hundred pounds, six times the price of pork per pound, if fed with grain at the rate of three pounds milk per pound of grain. If hogs are worth 12 cents, skim milk fed this way is worth 72 cents per hundred pounds.

All hogs ought to have free access at all times, to wood ashes, salt, charcoal, some form of lime other than quicklime, in separate containers; also fresh water.

California rice bran or meal with bits of the hulls in it, has knocked out lots of pigs. Hulls stick in the intestines, leading to constipation, scours, and runts.

A sow should gain a pound per day from the time she is bred until she farrows. Gilts and very thin old sows should gain more.

Wean the sow—not the pigs. Leave the pigs where they have been and move the sow.

CARE BEFORE FARROWING.

Ten or fourteen days before farrowing, put the sow into a house and lot by herself. The house need not cost over \$15. The lot should be at least a half acre and be covered with green pasture. Lacking green pasture, cut green stuff to feed her.

RATIONS FOR PIGS BEING DEVELOPED FOR BREEDING PURPOSES.

Where pigs are on good pasture the daily ration may be reduced one-third. Make into slop or feed dry in self-feeders.

Month feeding period	RATION NO. 1.				Ration daily per 100 pounds live weight, feeds in pounds			
	Monthly mixture feeds in pounds	Finely ground barley or corn	Wheat middlings	Tankage	Mixture	Water	Skim milk	
3rd	45	50	5	6	3.8	11		
4th	50	44	6	6	3.9	11		
5th	55	41	4	4	4.0	10.5		
6th	60	35	5	5	4.1	10		
7th	70	26	4	4	3.6	9		
8th	84	10	6	6	3.0	9		
9th	88	10	7	7	2.6	9		
10th	83	10	7	7	2.0	9		
11th	83	10	7	7	2.3	9		
12th	83	10	7	7	2.0	9		
RATION NO. 2.								
3rd	60	40			2.6		12	
4th	56	44			2.7		11	
5th	54	36			2.8		11	
6th	47	33			2.9		10	
7th	72	23			2.4		8	
8th	75	25			2.5	1	8	
9th	71	29			2.4	2	8	
10th	70	30			2.3	2	8	
11th	70	30			2.2	2	8	
12th	70	30			2.2	2	8	

This acts as a salad and keeps her temperature down. Watch and feel of her udder occasionally to learn the condition of her milk. It will get her tame so you can help in farrowing. If she is developing milk too soon or too freely, reduce the grain.

FEED AFTER FARROWING.

Too much milk at the start gives pigs scours. The sow's milk should increase for a while as the pigs grow older. This is accomplished by feeding according to the schedule herewith, modified by Mr. Myers from Prof. Wm. Dietrich's rations. The amount of feed must be varied according to age and condition of the sow and size of litter. Get five boxes side by side and prepare a quantity of each mixture.

RATION FOR SOWS SUCKLING LITTERS.

[Feed as a slop; or dry in self feeders. All parts by weight.]

Days after farrowing	Mixture to feed	Pounds of mixture to feed twice daily per 100 pounds live weight of sow plus weight of litter.	Mixture	Water
1	1	.1		3
2	1	.2		3
3	1	.3		3.25
4	2	.4		3.25
5	2	.5		3.25
6	2	.6		3.5
7	3	.7		3.5
8	3	.8		3.5
9	3	.9		3.75
10	4	1.0		3.75
11	4	1.1		3.75
12	5	1.2		4.0
13	5	1.2		4.5
14	5	1.2		4.5
15	5	1.2		4.5
16	5	1.2		4.5

At this time the sow is on full feed and should be fed this same ration. (No. 5), mixture until weaning time, say eight to 12 weeks old.

Mixture 1.—Wheat bran one part; wheat middlings one part.

Mixture 2.—Wheat bran one part; wheat middlings two parts; finely ground barley, corn, or corn meal two parts.

Mixture 3.—Wheat bran two parts; wheat middlings six parts; digester tankage 60 per cent, one part; finely ground barley, corn, or corn meal, eight parts.

Mixture 4.—Wheat bran two parts; wheat middlings six parts; finely ground barley, corn, or corn meal, 12 parts; digester tankage 60 per cent, one part.

Mixture 5.—Wheat bran two parts; wheat middlings six parts; finely ground barley, corn, or corn meal, 14 parts; digester tankage 60 per cent, one part.

Feed as slop; or dry and thoroughly mixed in a self feeder. Ground barley costs \$1 per ton more than rolled barley, but is easily worth the difference if fed in slop. It should be finely ground if ground at all. Do not feed rolled barley in slop, for the pigs do not chew it. Rolled barley is all right if soaked and drained. It works a little better in self feeders if dry, than ground barley. Do not allow soaked, rolled or whole barley to sour.

If the sow is making much milk, let up on the feed several days before weaning. Then, on the third day before taking the sow away, shut the pigs away from her except three times a day. Let them suckle twice next day and once the last day. On these last three days, give the sow practically no feed.

FEED FOR PIGS AFTER WEANING.

The following ration will keep weaned pigs growing steadily. Since size counts for so much, you can't afford to stunt them by either overfeeding or underfeeding.

First Annual Sale

OF

Purebred Berkshires

We have decided to inaugurate a custom of annual public auction sales. Our first sale will be held at

Escalon, August 2, 1917

(The day following the Carruthers Sale at Mayfield)

The bred sows and open gilts for this sale have been carefully selected from our herd of 250 purebred swine. They were sired by Grand Leader 2nd, Solano Emblem and Fashion Longfellow. They will be in pig to Grand Leader 2nd and to Royal Superbus 220200, the great boar we chose to fill the place made vacant when we sold Grand Leader to go East. Royal Superbus carries the same blood lines which have made Grand Leader's get such consistent winners wherever they have been shown. He is, in fact, a half brother to Grand Leader, both having been sired by that great sire, Superbus. Royal Superbus is a very smooth, deep-bodied boar, with good hams and heavy bone.

Catalog of Sale Ready Soon. Write for Yours Now.

AT PRESENT OUR MOST ATTRACTIVE OFFERING IS SOME WELL-GROWN STRONG SERVICE BOARS, 3 TO 15 MONTHS OLD, WEIGHING 350 TO 500 LBS. A LOT BEYOND WHAT IS NORMALLY OBTAINABLE FOR IMMEDIATE AND HEAVY SERVICE.

Expert Hints on Advertising Hogs

[Resume of an address delivered by R. H. Whitten at the California Swine Breeders' Association at Davis, Cal., May 30.]

If you, Mr. Hog Breeder, who can't get satisfactory results from advertising, would only put yourself in the place of the average person who reads your advertisement, you would stop crying that "advertising doesn't pay." You would cease blaming the newspapers and magazines. Instead, you would compose some new advertisements with punch and pulling power. Remember this: you cannot expect a paper to get the inquiries for you. No matter how good a paper may be, it can only act as a distributing medium for advertisements. The effect that the advertisement has upon those persons depends upon you, not upon the publication.

When you place an advertisement you enter the field of competition—not alone with other breeders of your kind of hogs, but with every breeder who advertises in the publication. For, while some readers may be looking for advertisements of particular breeds, many who are just thinking of taking up hog raising may not be decided upon any certain breed, and others already raising hogs may be dissatisfied with the breed they have and may be considering a change.

A reader does not answer every advertisement in a magazine. He just glances through the pages, picks out a few advertisements that particularly appeal to him, and answers them. He very seldom notices the commonplace, conventional advertisements. Consequently, no matter if your stock is better than that of some other breeder, you must not expect a reader to buy it in preference to his unless your advertisement also is better.

Advertising is simply salesmanship in print. And salesmanship is an exact science. There is no chance about it. Every result can be traced to a given cause, and, if you expect your ads to pull, you must learn the causes which bring about success.

SECURING ATTENTION.

In writing an advertisement you should aim to first secure attention, then create desire, and finally inspire the resolve to order your stock or to send for your literature. Attraction must be the keynote of your advertisement. This applies both to the general make-up and to the headlines. By the judicious use of borders, photographs and drawings, or by having something unusual in the type or arrangement, you can give your advertisement both attractiveness and distinctiveness. I like the idea of having something about the advertisement—the border, or an illustration, or a catchy phrase, or a combination of them—the same every time. The general wording should be changed frequently, but if something striking is made permanent it will be remembered, like a trademark.

Pictures tell a story quicker and better than cold type, and they leave a more lasting impression. A poor picture only spoils sales that otherwise could be made.

It is often said that the headline determines the strength of an advertisement, and there is considerable truth in the statement, for if the headline is not catchy enough to attract attention the balance of the advertisement will never be read. But when I say "catchy" I don't mean

smart. Many amateurs think that to attract attention they must say something clever—perhaps humorous. But to combine humor and salesmanship is about the most difficult thing in the world. When a person finishes reading your advertisement you want him to say, not "What a clever ad!" but "By jiminy, that's what I'm going to buy!" Don't use general statements, either. Such headlines as "For Sale," "Notice," "Attention," and "Announcement" don't connect with a reader's needs; they don't strike a point of contact; they don't hit him in a vulnerable spot. Start your ad with some such expression as "Make Hogs Pay," "Breed Up Your Herd," "Money in Hogs," "Do Your Hogs Pay?" or "Hogs for Profit."

CREATING DESIRE.

Occasionally some grouchy advertiser will say that you can offer your goods to readers, but whether or not they purchase depends entirely upon them. He gives as his reason that old saying, "You can lead a horse to water, but you can't make him drink." But that adage is a back number, as is any person who believes it. You can make a horse drink if you first make him thirsty by salting his hay, and you can make a reader order what you have for sale if you salt your advertisement by using descriptions that will create a desire for your stock. You have good reasons why you raise a certain breed. You have reasons galore for their excellence. Then give some of the more important ones to the readers of your advertisement. Mention the size, bone, stretch, mellowness, quick growing and easy feeding qualities; the vigor, prolificacy and prepotency. If you produce show stock, bring that to the front. Mention your winnings and those of your customers. The best way to compose an advertisement is to write just as you would talk to a visitor. These points mentioned are the ones you would mention to a visitor, so put them in your ad. Use short, familiar words and short sentences, and make every expression crisp, clean-cut and right to the point. Every word which does not add strength to your advertisement weakens it.

INSPIRING RESOLVE.

But it is not enough to create a desire for your stock. The reader may be sincere in his decision to order from you, but unless your advertisement causes him to take immediate action, something may happen that will change his plans. So, after completing your description, it is best to add a few words to develop action, such as "Order Early," or "Write at Once." Even such an expression as "Send for Circular" or "Write for Prices" helps to develop action. Key each advertisement, if you use more than one publication. Keep track of the number of replies received from each, and also the cost per inquiry. The paper with the highest rate may prove the cheapest in the end by furnishing a large number of inquiries at a low cost for each.

I like to have a line appearing under my name and address to give a good farewell impression to the reader. I generally use the expression "Satisfaction or Your Money Back," and find it a winner.

(To be continued.)

Announcement

Hear Ye! Hear Ye!

BE IT KNOWN that owing to crowded conditions the good herd at Normandy Farms, Visalia, California, owned by Arlington M. Smith, headed by the good boar Winona Royal Champion 5th, Junior Champion of the Western Berkshire Congress Show at the California State Fair, 1916, and the junior pig sensation of last fall circuit, containing many grand sows of wonderful show ring reputation and production record, bred to grand old sires the country over, have been moved to a larger acreage to be known hereafter as

A1 Ranch

That among many recent purchases of high-class additions, in which neither time nor money have been spared, the good boar Charmers Star Master, a sire of considerable reputation and breeding record, was brought west from the herd of E. J. Barker of Thorntown, Ind.

BE IT FURTHER KNOWN that A1 shall stand for all that is good in Berkshires; the size, early maturity, prolificacy and vitality that makes this good breed a universal favorite among farmers; the quality and style that excites the imaginative and the high dressing percentage and high-class product that appeals to the packer, retailer and consumer

The management of A1 RANCH earnestly solicits all correspondence of anyone interested in Berkshires. Write for farm catalog just out and learn more of this herd.

Live Stock and Dairy Notes

Livestock breeders all over the State are invited to send on postal cards, notes regarding their sales, State and County Fair intentions, new stock, etc.

The Dairy.

California furnishes over half of the 3,080,000 pounds of butter contracted for by the United States Navy.

The milk dealers of Redlands have advanced the price of milk from 5c to 6c a pint and from 10c to 11c a quart.

A Jersey cow, Dosoris Park Lily, bred, owned and tested by the estate of Chas. Pratt, Glen Cove, N. Y., has made two consecutive years' records of over 900 pounds of butterfat.

At the Lynch ranch near Paso Robles three young ladies put 15 cowboys to shame in roping wild cattle. The ladies were the two daughters of Henry W. Lynch, and Miss Bessie Pinkerton of the Pleyto ranch.

8,942,120 pounds of creamery butter were reported in 292 storages on June 1, 1917. The total holdings reported by 217 storages were 8,431,140 pounds as compared with 7,016,731 pounds June 1, 1916, an increase of 20.2 per cent.

The San Joaquin Valley Dairy-men's Association has effected a temporary organization at Fresno. The body will be a non-profit co-operative association, in no way competing with co-operative creameries already established in the Valley.

R. F. Fisher of Carlotta has a registered Holstein, Sugar Queen Topsy, on which he hopes to win the Holstein prize for 305 days' production as a two-year-old. She produced 13,984 pounds milk containing 486.9 pounds fat and dropped a calf two months after the close of the test. One of his aged cows, Princess Zozo Pletertje 2nd, produced 20,252 pounds milk containing 735.68 pounds fat in 365 days. The shorter test period is preferred in order to keep breeding periods uniform.

F. A. Heroux of Modesto, who attended the National Holstein-Friesian Association Conference at Worcester, Mass., also the great National Guaranty sale, is shipping a small but rather select group of the Blacks and Whites to Stanislaus county. In the lot is a young son of King of the Pontiacs out of a 20-pound two-year-old heifer, also Model Domino Glista purchased from E. A. Powell, Lakeside Stock Farm, Syracuse, N. Y., along with four other females from same farm, one 30-pound A. R. O. cow in the lot. Another of 26-41 in seven days and a two-year-old granddaughter of King Segis with an A. R. O. of 22-12 in seven days, both purchased at Worcester along with

10 other young, undeveloped, but well-bred females purchased at Worcester and various other points in New York State.

Of the 159 cows in the Ferndale Cow Testing Association which made over 60 pounds fat in May, 1917, 107 are listed as Jerseys and 8 as hyphenated Jerseys. Most of these have high percentage of Durham blood.

The Pacific National Dairy Show for 1917 will occur November 16 to 23, inclusive, at which time a general exhibit of dairy stock, dairy machinery and dairy products in general will be displayed at Portland, Oregon.

Butter in cold storage in Los Angeles, May 31, 1917, was 45,033 pounds, a gain of 14,159 pounds since the week before. The same date last year 90,087 pounds were in store, making an increase over a year ago of 54,946 pounds. The gain the same week last year from the one previous was 13,432 pounds, showing but little difference in the accumulation in store now and this time last year.

Swine and Swinememen.

Homer Hewins of Maplewoode Ranch, reports some fine spring litters of his purebred Berkshires.

The National Duroc-Jersey Record Association has purchased Liberty War Bonds to the extent of \$1000.

Sam Robinson prefers white hogs for Imperial county except for their tendency to get sore ears due to sunburn. He is trying out Durocs and Berkshires this season to decide which seems best. Then he will go into purebreds.

Arlington M. Smith has moved his Berkshires from Normandy Farms to larger quarters at Al Ranch, Visalia. Mr. Smith recently brought from the East and added to his herd, Charming's Star Master, a sire bred along the best Berkshire lines.

W. S. Guilford recently secured for his Butte City Berkshire herd a son of the great English boar Epochal. This makes 5 great boars now in this herd. The others being, Iowa Champion Peer 2nd, Mayhews Leader 6th, Superior Lustre and Dukes Combination 13th.

Farmers in the Bryn Mawr section of the upper end of San Bernardino county are giving increased attention to hog raising, and the number of hogs in that section has greatly increased the past six months. More attention is also being given to cattle raising, the high price of meat attracting ranchmen to livestock.

R. M. Dunlap brought from the East this week two Duroc-Jersey gilts for A. J. Welch of Redwood City. These were secured from Crow & Son of Hutchinson, Kansas. The senior yearling was shown through the circuit last fall and won many prizes. The other sow is one of the best the Crows had. Mr. Welch has already a fine lot of hogs on his ranch and will show at the State Fair this fall.

Nate Hauck of Alton will be at the State Fair this year with two beautiful fall gilts and five spring pigs, which have been entered in the Poland-China futurity. They are to be sold at the Poland-China Association sale during the Fair. His smooth, big-boned, squarely-built, big yearling boar, which took second at the State Fair last year, is still on the job and in fine working shape, but will not be taken to the Fair this year.

A. B. Humphrey, proprietor of Grapewild Farms, has decided to inaugurate an annual public sale of purebred Berkshires. The date of the first sale will be August 2, 1917, at Grapewild Farms near Escalon. This sale will afford an opportunity to secure females sired by Grand Leader 2nd, the World's Champion Boar, who recently was sold and is now at the head of one of the big Eastern

herds. There will also be sows and gilts bred to Grand Leader and to Royal Superbus, a half brother to Grand Leader, recently secured to take his place at the head of the herd. Mr. Humphrey reports that Royal Superbus is developing wonderfully in spite of very heavy service.

Livestock Miscellaneous.

W. F. Holt sold last week his 4,800 acre stock ranch near Piru, Ventura county, to Sterling Price, a wealthy Orange county beet rancher, for \$50,000 cash.

Imperial Valley creameries are filling large contracts with the Government for butter to be used by the

Army and Navy. This butter is made entirely from sweet cream and kept up to the highest possible standard.

The prices of meat animals—hogs, cattle, sheep, and chickens—to producers of the United States increased 1.2 per cent from April 15 to May 15, this year. In the past seven years prices decreased in like period 1.2 per cent.

Beef Cattle.

The U. S. Department of the Interior notified Governor Stephens that sections of Yosemite National Park will be opened to cattle grazing as soon as snow is sufficiently off the range. Sections of the Park will be thrown open for cattle-grazing in

BASSETT'S POLAND CHINAS

For many years at widely separated show rings, under many different judges of varying type ideals, my Poland Chinas have been consistent prize-winners. My herd is large and I cull closely. The animals sent out as breeders are the very tops of a large number. I KNOW that my kind of Poland China is a profitable farmer's hog, for I send carloads of them to the packer every year—uniform in size, high in quality, quickly and economically matured and finished.

Young stock, \$30 Up.

M. BASSETT,

Box 1, Hanford, Cal.

order to save thousands of head of stock which otherwise would have to be butchered because of the lack of forage.

Several thousand head of cattle will be delivered in Ely, Nevada, for shipment to Kansas City, it is reported.

Cattle shipments from the Porterville district for the spring season of 1917 will reach a total of \$500,000 in value, according to local estimates.

Eleven cars of beef cattle, including 270 cows and steers, were shipped out of Hollister recently by the Pacheco Cattle Company to J. C. Mitchell, a Denver livestock dealer.

A Southern California syndicate has bought of W. W. Landers his stock ranch of 4,000 acres situated on the south bank of Kern river in Tulare county for \$150,000. Included in the sale are 1,500 range cattle.

H. M. Barngrover of San Jose writes us he has recently shipped to his Veramont Ranch in Plumas county 9 head of registered Hereford yearling heifers and a bull. The bull is California Prince 2nd, a choice son of Prince Lad 11th, the sire of the celebrated steer, California Favorite.

R. M. Dunlap returned the first of the week from a trip through the Central States and brought with him nine head of Scotch cows with five calves afoot, for the Ormondale Co. of Redwood City. One of these was secured from E. Ogden & Son of Marysville, Mo.—a two-year-old Mayflower 4th shown last fall as a senior yearling and won several firsts. She is bred to Bellows Bros.' Radium, a \$10,000 bull. Also the Ormondale Co. secured a splendid senior calf, which they expect to show this fall.

Sheep.

The highest price paid for wool on this coast was 63½¢ per pound for 35,000 pounds recently at Lebanon, Ore. It is stated that options are being taken for Willamette Valley, Ore., wool at 65¢ per pound.

The various organizations of Canada forming the United Wool Growers' Association will hold their annual wool sales this year between July 1 and August 10. The Dominion Department of Agriculture is arranging for a warehouse in Toronto or some other point in eastern Canada for the use of the various wool growers' associations of Canada, and it is understood that if reasonably good prices are not offered at the sales the wool will be sent to the warehouse to be disposed of at a later date.

The University Farm has lately added to its flock six choice Romney ewes, recently imported by S. H. Coffin of North Yakima, Washington. They were bred by the famous Romney breeder, E. Short of Pararangi Station, Fielding, New Zealand, and are yearlings past. The ram was bought at the P. P. I. E., being exhibited by the New Zealand Government and was the first prize ram lamb. The breed originated in a low-lying tract of land or marsh in the county of Kent in southeastern England and is known as the Romney Marsh. They were good grazers, rarely receiving any feed other than pasture throughout the year. The breed is hardy, and because of being raised on low ground they are regarded as being resistant to foot rot, and readily adapt themselves to either range or farm conditions.

An Official Register of Tuberculosis-Free Herds for California

[By Charles Keane, D. V. S., State Veterinarian.]

[The Rural Press takes pleasure in printing below a synopsis of the address delivered by State Veterinarian Keane before the California Holstein-Friesian Breeders' Association at its recent session at Chico. In this address is discussed an important phase of the bovine tuberculosis problem with a view to the ultimate control and eradication of this dread disease. The doctor said:]

The movement to establish official registers of tuberculosis free herds, while of recent origin, has gained some impetus. The Federal Government, through its Department of Agriculture, has been carrying on a propaganda in relation to this subject since 1915. In a recent letter from the Chief of the Bureau of Animal Industry we are advised that Federal accredited tuberculosis free herds have been established in the District of Columbia and in twelve other States. Practically all of the beef and dairy breeds are represented in a total of some 104 of these accredited herds. Of the total number nearly one-half of these herds are of Holstein-Friesian breed. State registers have been established in three States.

The advantages of owning an officially accredited tuberculosis free herd are manifest, among which might be mentioned the benefits brought about in the herd by freedom from tuberculosis; publicity and consequently greater advantages and opportunities in selling and possibly better prices; and freedom from the necessity of having animals tuberculin tested prior to interstate shipment.

It has been further proposed that publicity at live stock exhibitions and State and county fairs may be given to these accredited herds by placards to be placed upon their pins. This action, it is expected, will ultimately lead to the establishment of separate exhibition classes for these herds. These records, being public documents, will, of course, be published from time to time, showing the names and addresses of the breeders whose herds are included in same, as well as such additional data as might be of advantage to possible purchasers of animals of the breed.

Shall California adopt such a register? From our official viewpoint, we believe the establishment of an official register of tuberculosis free herds in this State will be just one more step toward the ultimate goal that we are seeking—namely, the control of bovine tuberculosis. While not overlooking the effect such a movement, if adopted, might have on

breeders, our ultimate object is to aid our great and growing dairy industry.

If California should establish such an official register our plans would very likely differ somewhat from those of other States; for in addition to the establishment of accredited adult herds by plans somewhat similar to those adopted in other States, we should like to also offer you the proposition of establishing accredited junior herds; and we shall give you a brief outline of our ideas in relation thereto:

There are some breeders who might find it practically or economically impossible to adopt certification by means of testing and segregation of reactors as it is conducted in other States. In such herds, if certification were desired, the work could start with the calves by removing them from their dams shortly after birth and placing them in a spot which is entirely sequestered on the same premises from where the balance of the herd is located, or by finding a new suitable location for them. These calves would be fed milk that is sterile, as far as tuberculosis infection is concerned, or they could be supplied with nurse cows which had previously passed the necessary official examinations and tests to insure as far as possible their freedom from tuberculosis. As the young herd grows up the members in it would be tested by the State regularly, preferably semi-annually, and the herd would be visited from time to time in order to insure that the regulations in connection with such certification were properly carried out. By the establishment of such an accredited junior herd the breeder who now has an infected herd would be laying a foundation for a new clean herd and would likewise be in the position of selling clean, tuberculosis-free animals just as if he had already had an entirely clean herd without the severe drain and expense that it often costs to secure this much sought objective. It is quite certain, however, that in the course of a few years any breeder adopting such a plan would be maintaining two herds, namely, an old, infected herd and a young, clean herd. We feel quite sure that if such a plan were adopted by any breeder, it would ultimately lead to the maintenance of but one clean tuberculosis-free herd built up in the manner that I have briefly described. Looking at this subject from all angles, it appears to me that the buyer is becoming very discriminating as time goes on and is ultimately

The De Laval Line

Acme Feed Cutter and Silo Filler

THE ONLY STEEL FRAME CYLINDER CUTTER ON THE MARKET

The steel frame is strongly riveted. It can't warp, as does the old style wooden frame. All bearings and shafts are held in rigid alignment at all times and vibration and wear reduced to a minimum.

BUILT FOR CAPACITY

The large throat of the Acme Feed Cutter, the Automatic Feeding Roller and the improved design of the traveling feed table, gives the machine ENORMOUS CAPACITY and makes it EASY TO FEED.

Knives are of special steel ground on the inside, spiral in shape and produce a uniform, perfectly cut silage that packs well in the silo.

BUILT IN SEVEN SIZES

The wide range of sizes make it adaptable to all cutter requirements.

THE ECONOMY OF CUTTING DRY FEED

The coarse hay usually nosed out and wasted by stock will be entirely consumed as food if first run through an Acme Cutter. You can actually make a saving of \$3.00 to \$5.00 per ton by this method.

ALFALFA MEAL

The Acme Alfalfa Meal Attachment enables the production of an excellent grade of alfalfa meal at a cost not exceeding half the cost of baling.

IF INTERESTED IN THE ECONOMICAL PRODUCTION OF STOCK FEED, SEND FOR CATALOG ON ACME CUTTERS AND COPY OF THE DE LAVAL DAIRY HAND BOOK (a veritable mine of dairy data). A postal will do.

Purebred Registered

HOLSTEIN CATTLE

\$53,200—PAID FOR HOLSTEIN BULL CALF. The greatest tribute to the superiority of Holstein-Friesian Cattle was paid in the auction sale at Worcester, Mass., June 7 and 8, where a Holstein Bull Calf brought \$53,200, a Holstein Cow \$18,300, and a Holstein Heifer \$18,000. 143 animals were sold for \$296,470, or an average of about \$2,073 per head. In 1916 at Detroit, Mich., 140 animals were sold for an average of \$1,173 per head. This great increase in selling values is proof conclusive of Holstein popularity.

THE HOLSTEIN-FRIESIAN ASSOCIATION OF AMERICA
P. O. Box 230, Brattleboro, Vt.

going to demand breeding animals from non-reacting herds.

A number of States have recently made special provisions for the acceptance of cattle from other States originating in accredited herds. The Northwestern Live Stock Sanitary Association, at a recent meeting, adopted a resolution recommending that all of the eight States in the association require a sixty-day rest on purebred cattle shipped into those States unless such cattle came from accredited herds.

The Giant Of The Dairy

Grade up with a Jersey Bull! He is half the herd, and the breed determines half the profits. Breed him to your grade cows and bring the herd average near the Jersey average—489 pounds of butter fat per year. Your calves will be beauties. They'll mature quickly into gentle, hardy, vigorous and persistent milkers, long-lived and adapted to any climate. Let us tell you more about them. Send for our book, "The Story of The Jersey." It's free and it's a dandy.

R. F. WILSON, Stockton, Cal.

F. STENZEL WINS RURAL PRESS PRIZE IN STATE DAIRY CONTEST.

Our records show that five grades owned by F. Stenzel, San Lorenzo, had the highest production of butter fat for the month of May, among the cows entered in the State Dairy Cow Competition, viz., 2177.0 pounds milk, 84.640 pounds butter fat (average distance from calving 116 days at the beginning of the month). Mr. Stenzel is, therefore, entitled to the Pacific Rural Press prize for the month of May and I would ask you, therefore, to send him a check for the prize money. Ten other herds had five grades that qualified for the Pacific Rural Press prize for May as follows: J. W. Coppini, average production of butter fat 79.446 pounds; G. E. Trigg, 74.865 pounds; I. Iversen, 67.840 pounds; Hollow-Hill Farm, 64.280 pounds; K. W. Abbott, 55.934 pounds; Floyd Beebe, 64.047 pounds; Bohnett Bros., 49.241 pounds; L. Hess, 44.278 pounds; J. M. Christen, 33.679 pounds; Southern California State Hospital, 51.081 pounds.

Berkeley, June 14. F. W. WOLL, Superintendent of Dairy Tests.

Beef Raisers Jobbed (?)

[Written for Pacific Rural Press.]

Cattle in the Alturas district of Modoc county are grazed in national forests and public domains until July and August, when they are taken down to the valley ranches and fed or pastured until September and October, when they are generally sold. Last fall, just before the beef cattle were gathered, said P. S. Dorris, prominent cattleman of Modoc county, at the recent farmers' meeting in San Francisco, butchers who buy in that section met in Reno and apportioned to each his district, in which none of the rest would compete; and reached an understanding as to prices. The arrangement was said to be so well organized and adhered to that it was impossible for Modoc people to get any other buyer to look at or offer a price on their cattle. Meanwhile, feed on ranches was rapidly used up or bought by the big manipulators, and the beef had to be sold. A buyer would come into his district, look around a few days, buy a few head, and go away, telling stockmen his firm had all they could use for the present, but that he would be back in a few days. By that time more people would be pinched for feed and would sell at a sacrifice. The operation was repeated until practically all of the stock were bought at his own price.

One San Francisco butcher sent a

buyer into a district about 70 miles from Alturas and paid \$5 to \$10 per head more than Alturas people could get. The buyer in Alturas district was informed of this. He went immediately to San Francisco, says Mr. Dorris; prices dropped to the general level, and the competing buyer bought no more beef. The price he had paid proved that the beef was considered worth that much more than other districts were being paid, but it was also proved that stockmen could be forced to sell for less.

When the "manipulators" had bought up practically all of the stock a "sudden" shortage developed, the stockman had lost his profit, and the consumer paid all the traffic would bear. In many cases, stockmen made less, if anything at all, in two years than "manipulators" made in ten days to two months.

The "manipulators" knew the supply of cattle and feed, of which the farmers were relatively ignorant. The only solution, thinks Mr. Dorris, is for stockmen to organize and operate a market committee, with capital to carry stockmen who can't keep their cattle until it will bring a justifiable price, and who will keep members posted on available supplies of stock and feed that would affect right prices.

BEAN STRAW AND CORN SILAGE.

To the Editor: Would corn silage and bean straw make a successful feed for dairy cattle? or for dry stock or sheep? I shall have the straw from 100 acres of beans this fall and am thinking of planting corn for a 60 or 70-ton silo, if I could make a success of feeding it to either sheep or cattle. The cattle seem to eat the straw with relish here in the spring. But I have always fed it with alfalfa hay. Hay will be very scarce and high here this fall, so any suggestions you could give me as to how I could feed the straw to an advantage would be welcome.—S. D. P., Turlock.

Bean straw balances well with corn silage—both for nutrients and for dryness and succulence. It will work well both with cattle and sheep. For dairy cows it is good also, but a little alfalfa hay or protein meals could be added to advantage. It will certainly be of advantage to have the amount of bean straw which now seems to be promised for feeding during the coming fall and winter.—Editor.

TAMWORTHS AT HOLTVILLE.

H. E. Betts of Holtville is one who is putting into practice the slogan of "More and better hogs." He has a fine herd of Tamworths, the herd header being Swineland King 2nd; dam, Hazel M 2nd and sired by Nimrod 3rd. Mr. Betts uses no wallows for his hogs. The

You need a new DE LAVAL SEPARATOR NOW

1st If you are still using some gravity or setting process of creaming—

BECAUSE YOUR WASTE IS GREATEST and quality of product poorest in mid-summer when the milk supply is heaviest.

BECAUSE TIME IS OF GREATEST value on the farm at this season and the time and labor saving of the good separator counts for most.

BECAUSE THE SKIM-MILK IS POOREST without a separator in hot weather and often more harmful than helpful to calves.

BECAUSE THE WORK OF A NEW De Laval Cream Separator is as perfect and its product as superior with one kind of weather as with another.

2nd If you have a very old De Laval or an inferior separator of any kind—

BECAUSE THE LOSSES OF THE POOR separator from incomplete skimming and the tainted product of the hard-to-clean and insanitary separator are the greatest at this season.

BECAUSE OF THE GREAT ECONOMY OF time at this season in having a separator of ample capacity to do the work so much more quickly.

BECAUSE THE NEW DE LAVAL IS SO much simpler and more easily handled

and cared for than any other, and you can not afford to waste time these busy days "fussing" with a machine that ought to have been thrown on the junk-pile long ago.

BECAUSE THE DE LAVAL SEPARATOR of today is just as superior to other separators as the best of other separators to gravity setting, and every feature of De Laval superiority counts for most during the hot summer months.

These are all facts every De Laval local agent is glad of the opportunity to prove to any prospective buyer. If you don't know the nearest De Laval agency simply write the nearest main office, as below.

Shoats Die Mysteriously.

To the Editor: Have lost several shoats lately and am not able to determine cause. The pigs are about three to four months old. The first indications of trouble are loss of appetite and inclination to lie around. Had one taken suddenly with lameness or stiffness in front legs, which got better after a day or so and the pig was able to walk about, but refused to eat or drink anything and died in five or six days. I opened one and there did not appear to be anything wrong inside. Stomach was filled with yellowish fluid and appeared to be somewhat inflamed and reddish on inside.—G. M. E., Tulare.

This looks like rheumatism. Give 5 grains hexamethylamine and sodium salicylate each to each pig twice a day.

Calf Probably Had Pneumonia.

To the Editor: I have two calves each one about four or five months old and both sucking the same cow. One of the calves, a heifer, began to walk around like she was stiff and began to fall off. She coughs some and had sore eyes for awhile and is getting thinner all of the time. This calf never had the scours all winter, but since she has been on green grass she has the scours a little.—E. W. C., Patterson.

The sick calf probably had an attack of pneumonia, which left her with a chronic pleuritic affection.

Test the Filly for Glanders.

To the Editor: Several months ago small lumps appeared between the jaw bones and along the throat of my filly. These remained for two or three weeks and disappeared. Then, in about a month, appeared again and kept enlarging till now there is considerable swelling all around the jaws and well up toward the ears. The swelling is quite firm and doesn't seem sore. The animal is in apparently good health; eats well and keeps in good condition.—E. W. L., Covelo.

It would be advisable to have this animal tested for glanders before any other diagnosis is made.

A Ruptured Colt.

To the Editor: My colt has a rupture of the navel a little larger than a hen egg. It started a few days after birth. I put lime water in the milk two or three times a day. Would it be advisable to put everything back up and then tie the skin close up to the belly, or what can be done?—E. J. P., Templeton.

These ruptures usually disappear in the first half year of life. If at that time it is still there, an operation is advisable and should be done by a qualified veterinarian.

Jersey Has Hard Lumps on Body.

To the Editor: Our Jersey cow has little hard lumps over her entire body, and well above the bag behind where the hair is short the skin, in quite a large patch, is hard and crusted and risen a little above the other skin and a yellow transparent matter is oozing out. Can you tell me what the trouble is and what to do?—C. D. H., Santa Cruz.

Give one-half ounce doses of Fowler's Solution three times a day.

Mare with Warts on Udder.

To the Editor: John Elkema of Tranquillity has a mare heavy with foal, aged 5 or 6 years, that has a lot of little warts on her udder and one large one on leg about four inches across. The large wart bleeds some. What should be done?—G., Fresno.

Paint warts with a 2 per cent solution chromic acid daily.

Treatment for Thrush.

To the Editor: I have a horse with the thrush, commonly so-called. I used for one application blue vitrol dissolved in hot water. It helped, I think. What is your advice?—F. K. S., Pixley.

Your treatment is all right.

Pig Paralyzed.

To the Editor: What can I do for a pig that has been paralyzed in the hind legs for about three weeks?—P. S., Sacramento.

If this pig is pregnant the trouble will pass off when she farrows. In any case give teaspoonful syrup iron iodide three times a day.

Sows Get Trembly Legs and Die.

To the Editor: My sows get stiff and trembly in the hind legs and are not able to get up without help and finally die.—J. G., Dos Palos.

Give ten grains each of dried iron sulphate and hexamethylamine to each sow in the feed twice a day.

Mule Colt with Sore Navel.

To the Editor: I have a mare mule colt about one month old. Its navel never disappeared and has always been little sore. What shall I do for it?—L. E. P., Wasco.

Paint this with tincture iodine daily.

CUTTER'S BLACKLEG PILLS

"California's Favorite" for nearly 20 years

For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:

10 dose pkge. Single pills \$1.00

50 dose pkge. Single pills 4.00

10 dose pkge. Double Pills 1.50

50 dose pkge. Double Pills 6.00

Cutter's Pill Injector.... 1.50

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

QUESTIONS ANSWERED.

TURKEY AND RABBIT TROUBLES.

To the Editor: Will you please tell me what is the matter with my turks? They are from three weeks old to two months, are sick only a few hours, and then die. Only miss about one feed. I feed curd, cornmeal and chick feed. I have rabbits that have sore ears. What is the cause, the cure, and is it contagious?—W. B. S., Modesto.

The information is too meager for proper diagnosis, but I believe your turks are dying with lice. Head lice are hard to find on turkey poult. If you will dust the mother hen good with good insect powder, then put one or two drops of oil of cedar on the turks' head feathers I think your troubles will cease. Sore ears on rabbits are contagious, but by spraying the hutches and using some good ointment or carbolated vaseline on the ears you can easily cure it and keep it down. It is hard to say what causes it in individual flocks. Primarily it is dirty hutches and neglect of sanitation.

CHICKS NOT FEATHERING OUT WELL.

To the Editor: We have six-week old R. I. Red chicks that are not feathering out well. What is the cause? Is it advisable to buy baby chicks at this time of year?—J. R. I., Willows.

Some fault in your brooding or feeding. Give a little more bone meal and animal food; it takes mineral to make feathers. If the fault is in the brooding it is because the hover is too hot, or the chicks are crowded. To second question: Yes, if you can furnish shade for very warm days the chicks will lay almost as soon as if hatched early this year. Weather has been so cold I would prefer late hatched chicks.

RABBITS WITH DISEASED LIVER.

To the Editor: On killing rabbits we have found a few whose livers were affected as per sample sent you. They show no symptoms of sickness, looking well and eating as usual. We feed alfalfa meal, moistened very slightly with water, morning and night and give rolled barley at noon. There is water before them all the time. What is the matter?—Mrs. H. E., Stockton.

It is very probable that your rabbits have coccidiosis. This disease is caused by a parasite and the first sign of it is that the young rabbits get pot-bellied. This is not always the case. There is no way of telling, because it may be that the old rabbits have the disease in a chronic form and they pass it on. It is highly contagious. The United States Dept. of Agr. urges the separation of hutches, instead of having them in tiers, and spraying often with a good disinfectant. Your feed is very poor. Feed a little bran, vegetables or oats and keep rock salt in the pens.

TO PACK EGGS IN LIME WATER.

To the Editor: How do you put up eggs in lime water for winter use? How much lime do you use, and how much water does it take for a four-gallon jar?—J. M., Paicines.

Take 16 ounces of quick lime, eight ounces of salt, boiling water one gallon. Make as much as you want, using these proportions to every gallon of water. To make the above, pour boiling water over the lime, stirring well to keep from burning. Add the salt, stir until it quits boiling and when cold pour off

the clear liquid. Pour this over your eggs, and keep a weight on them.

HOT WEATHER NOTES.

The warm days have come at last, just as everybody knew they would, but how many are prepared for them? If we are to get the best results from stock we should get this lesson of preparedness.

To be prepared for hot days we should have some shade for all kinds of stock, both young and old; we should have clean cool nests, so that if two hens happen to get in one nest they won't be so hot that broken eggs will result from the accident. Have plenty of nests; the hens won't always use them, but it is better to give them the chance. Have a cool place for your sitting hens and keep some of the ground moist so that they can have a bath when they get off to eat, and besides wet, cool ground is good for the eggs.

Feed your green feed about noon, if you only feed it once a day. This helps them through the hottest part of the day, then let them seek shelter till towards five o'clock.

GREEN FEED.

If you have not got plenty of green feed it is not too late yet to plant, provided you have irrigation water. The green feed grown with plenty of water is much more digestible than that grown on dry land, and yet that is better than none; so let every one try to do what he can under his conditions.

LEG WEAKNESS.

This trouble affects brooder chicks especially, and when it appears just reduce the starchy feed. Feed sprouted oats and put in the mash feed one part fine bone meal to five parts other feed. Sour milk or buttermilk is also good for leg weakness. All breeds are liable to it, but it is generally worse among the heavy breeds, where the body grows too heavy for the legs. Sometimes it causes a good bird to be a little bow-legged, but if it is caused by too quick growth, it won't hurt to breed from him as the next generation would be all right.

DIRECTIONS FOR PRESERVING EGGS.

The water glass method is the best and easiest, but not the cheapest. Now, as the quality varies in strength, it is better to allow for it. Boil seven or eight quarts of water and let cool, mix this with one quart of white water glass (sodium silicate), and when you gather fresh eggs pour the mixture over and weight the eggs down so that they are kept under the solution all the time.

THE LIME METHOD.

Take 16 ounces of good quick lime, pour over it one gallon of boiling water, stir all the time to keep the lime from burning. Add half a pound of salt, then allow the whole to settle. Pour off the clear liquid and that is what you use to pack your eggs in. Keep covered as in the case of water glass.

THE SALT AND BRAN METHOD.

Get a clean grocery box and line with paper, then mix good clean bran and salt, about one-fourth salt will do, and pack your freshly gathered clean eggs, not touching each other, large end down in the mixture. When it is full, cover about two inches of the mixture over the

top layer and paste paper over the top. Set away in a cool dry cellar and you will have eggs at Christmas as good as fresh-laid ones.

Purebred and Commercial

[Written for the Pacific Rural Press by Harry Mortenson, Suisun.]

HOW TO PRODUCE GUARANTEED EGGS.

(Continued from last week.)

The first point, and the most important now with the high price of feed, is to have good birds. This can be accomplished by culling rigidly from year to year. The poultryman who does not cull his flocks will soon go out of business. Now is the time to begin culling. Some birds have quit laying and should be marketed.

HOW TO CULL HENS.

Experiments have proven that a hen lays the color out of her vent, legs, beak and earlobes in a season. First, she will lay the yellow out of her vent, then beak and earlobes, and finally the legs. A good layer has scarcely any yellow in her body at the end of a laying season. A mediocre one may have some color left in her legs, while a poor layer will be as yellow as saffron. Of course, this holds true only with yellow-skinned fowls. The above, together with the pelvic bone test—that is, the distance between the pelvic bones—is one of the tests used by the University Farm. The best and in fact the only accurate method is the trap-nest, but the average farmer is not equipped to use the trap-nest.

LATE MOLTERS BEST LAYERS.

A hen that commences to molt now is not a good layer. She will not pay for her feed another year. Some years ago all poultrymen discarded their late molters because it was thought that the sooner a hen molted the sooner she would begin laying, but such is not the case. The best layer at the Davis Farm, Lady California, lost a few feathers at a time, commencing the molt in the winter.

HAVE HIGH-PRODUCING MALES AT THE HEAD OF FLOCK.

Breed from known, not unknown, males as well as females. The rooster is half the flock. Do not mate two-dollar hens with a fifty cent cock, for you will get chicks that will not pay for their feed. If you are not in a position to do scientific breeding, thereby building up your strain, buy eggs or chicks from someone who makes a business of it. The hit-or-miss system always misses.

MONGRELS BAD INVESTMENT.

Mongrel hens lay mongrel eggs, which bring the lowest market prices. That is to say, a mixed lot of hens will lay eggs of all colors as we stated in last week's issue. Such a product will leave no profit.

CONSTANT SUPPLY NECESSARY.

The main point is to secure a constant supply the year round. Artificial spring conditions in the winter if you have the right kind of hens will secure eggs when they are high. Electric lights turned on early in the morning has proven a success.

PROPER STORAGE.

After eggs are gathered, they should be placed in a cool dry place. A temperature of 31 to 34 degrees is most desirable. Fertile eggs commence to incubate inside of the hen, therefore the necessity of removing the eggs quickly to a cool place. Do

not store near onions, cabbage, fish, rancid butter and citrus fruits.

MARKET FREQUENTLY.

Do not keep the eggs longer than one week. If you have not enough to ship, club in with your neighbors, but be sure the neighbor produces good products or both will lose their reputation. The effect of one bad egg in a case will cause the consumer to doubt your goods for a long time. The producers should co-operate. Form a community egg circle. The result would be an improved quality of product, and higher prices.

BRIDAL OUTFITS

My dear Friends: I am sure any of the June brides would be interested in the display and sale of underwear that is now under way in the city stores and it would be of equal interest to every mother who was outfitting a daughter to go away to school this winter. There is a wide range of prices as well as of styles, but all the garments are dainty and light of weight. Heavy muslin underwear seems to be a thing of the past. Even though a garment is plain, it is of sheer material. The bridal sets, of course, are elaborate, but it is not of those I want to tell you.

THE ENVELOPE CHEMISE.

The envelope chemise, which is a combination of chemise and corset cover, is proving very popular and is made of sheer muslin, crepe-de-chine or washable satin. If of muslin, it is white, of course, and is trimmed either with hand embroidery or lace and insertion. If of silk, it is more popular in pink than white, because although the silk in both colors washes beautifully the white turns yellow in time, while, as the pink loses its color, it can be renewed either by using a few drops of red ink in the rinsing water or a small piece of red crepe paper to give the desired color. These silk garments cost a little more than double the muslin ones, but they wear well and if you want something for extra nice wear are well worth the money. These envelope chemise are worn on the outside of the corset and are on the whole better for slender women than for stout ones.

THE CAMISOLE.

For common wear, the brassiere is still good for stout women, but more slender ones favor the fuller corset cover of muslin, either lace or embroidery trimmed, but for better dressing the camisole has taken the place of the corset cover. This is usually made of silk or washable satin and is just a straight strip of the goods with lace trimming on the top and an elastic around the waist. Strips of ribbon over the shoulder hold it in position. These are very easy to make at home, so we can all possess them, even if the price in the stores seems too high. They run in price from \$1 upward, but could be made for less than that.

CORSET COVERS AND NIGHTGOWNS.

In the corset covers, nightgowns, in fact all lingerie, there is wash ribbon used, so that it can be washed and kept clean and sweet without sacrificing the beauty of it. The nightgowns are all low necked and short sleeved and many of them have lace yokes. The beautiful Philippine embroidery is seen on many of them and they would be very durable if carefully washed. Crepe-de-chine is used also for gowns.

PETTICOATS.

The petticoats have a wide range according to their uses. For substantial every day wear are the white piques, most of them made with a flounce finished with a scalloped edge, or the white sateens simply finished with a tucked ruffle. For better use are the silk jersey with a messaline flounce, or the crepe-de-chine with flounces edged with lace or the taffeta with corded ruffles.

THE HOME CIRCLE

And the most popular of all for use with summer dresses is the muslin skirt with the deep lace flounce. This flounce is made of row upon row of either lace or insertion and after each laundering is just like new.

ROSABELLA BEST.

PROTECTION AGAINST MOTHS.

At the time of spring house cleaning, all furs, woolen goods, feathers and other articles made of animal products should be carried out into the sun to be well beaten and aired. After sunning well and brushing thoroughly, all articles that will not be used during the summer should be carefully wrapped in newspaper or tar paper, sealing the opening with flour paste. These parcels should be carefully labeled. If articles are placed in boxes instead of wrapping paper, the box should have strips of paper pasted around the covers and joints to make it moth proof.

Woolen garments and furs not sealed against moths should be taken from the closets or wardrobes once a week to sun and air in the open. The closets and drawers should be kept free from moths by washing the woodwork in hot soap suds and following that if necessary by spraying with gasoline. Blankets should be sunned well and put away clean in wrapping paper or boxes.

If a carpet becomes infested while on the floor, sponge the spots freely with gasoline and apply around the edges as well. If possible it is better to take up the carpet and clean thoroughly and wash the floor with strong soap suds.

There are a number of articles that are moth repellants, but they do not destroy moths. Among these are gum camphor, fine cut tobacco, pepper, borax, or moth balls. These may be scattered through the articles in drawers and are to a certain extent, a safeguard against the ravages of moths.

CARE OF OILCLOTH.

Oilcloth should not be scrubbed with a stiff brush nor saturated with water. The surface is nothing but paint and if it becomes soaked, especially with water containing washing compounds, it quickly decays. Use a sponge or soft cloth with very little soap and wash and wipe quickly. After it is clean, a thin coating of wax or a floor oil mixed with wax may be applied. This makes a hard surface that is easily kept clean.

WHEN THE SHOE PINCHES.

Lay over the tight place without removing the shoe, a cloth wrung out of hot water. The leather will stretch and the foot be permanently eased. Shoes which are hard from being wet may be softened by rubbing with castor oil.

TOO THIN OR SLIM—THERE'S A DIFFERENCE.

There is a vast difference in being slim and too thin. A slim figure, in the strict sense of the term, is one that is also graceful and prettily rounded. A thin figure is one of ungainly angles about which there is nothing graceful. Women should realize that no day should be so full of duties that there is no time for rest and for the woman who is too thin this is especially applicable. A half hour each day, spent in a darkened room, lying down will relax both mind and muscles.

FAIRIES.

In the the deep, dark marshes,
Have you see pink mallows bloom?
Like flittering, fluttering fairies,
They brighten all the gloom.

The artists try to paint them,
Yet I have never seen
They could portray their petals
Of filmy, glistening sheen.

They tempt you, like gay fairies,
To follow them about.
It would be a doubtful venture:
You might get in—not out.
—Christian Register.

RICE CHARTREUSE.

Line a greased pudding dish one inch thick with cooked rice; then take one pound of beef chopped fine, with one teaspoon salt, one-half cup gravy or milk, one-half cup bread crumbs, one egg, one pimiento, onion juice, paprika and chopped parsley to taste, and pack in the mould. Cover with the rice and steam three-quarters of an hour if the meat was already cooked, longer if it were not. Cover with tomato sauce when ready to serve. For that, melt two tablespoons butter and add one tablespoon of flour and one cup of cooked, strained tomato. Let come to a boil and season with salt and pepper.

TO CLEAN CLOCKS.

To clean a clock, saturate a cloth or pad of cotton with kerosene oil and place it inside the clock on a small dish, so that the woodwork will not become saturated. As it evaporates, foreign substances on the wheels of the works will become loosened and drop. Repeat if necessary. For an alarm clock, one may remove the works from the case and put in a dish that can be covered and pour over kerosene oil. Let stand until all grease and dust have been removed. Return the works to the case without wiping off all the oil.

RHUBARB CAKE.

One cup rhubarb 'sauce, 1 teaspoon soda, 1 cup sugar, ½ cup seeded raisins, ½ cup walnuts broken very small, ½ cup butter or other shortening, 2 cups flour, 1 teaspoon each of cinnamon, cloves and nutmeg. Mix soda with rhubarb, cream butter with sugar, sift flour with spices into butter and sugar mixture, add rhubarb, raisins and nuts, mix thoroughly, bake two hours in loaf pan in very slow oven.

RAISIN GRAHAM BREAD.

One cup of sour milk, one-quarter cup molasses, one-quarter cup of sugar, one and a half cups Graham flour, one teaspoonful each of salt and soda, one cup chopped and floured seeded raisins, two tablespoonfuls of melted shortening; stir well and pour into greased pan, let stand for ten minutes, then put in the oven and bake for three-quarters of an hour.

Good Health.

[By H. E. Foster, M. D.]

Hot Weather and Ill-Health.

The last week or two Californians have experienced a decided rise in temperature, more noticeable especially in the interior valleys and in Southern California. In periods of excessive heat it is generally observed that there is an increase in sickness, and that this sickness manifests itself mainly in the form of gastro-intestinal disturbances, liver congestion, and sometimes skin eruptions due mainly to digestive disorders. In endeavoring to explain these disagreeable effects of a heated spell, various theories are advanced. It is said that disease germs are more active at these times, that foods tend to spoil more rapidly, and that there is a general weakening of the vital forces. One authority believes that the increased excretion of water through the skin and the correspondingly reduced elimination of water through the filtering apparatus of the kidneys, has much to do with this characteristic disturbance. In the elimination of the moisture of the body through the kidneys much of the poisonous material (naturally occurring in the body, through the normal breaking down of its tissues) is expelled, being held in solution. The sweat-excreting apparatus is less effective in this respect, consequently these poisonous products of the broken-down tissues are retained in the system in undue quantities and for undue lengths of time. Now, to counteract this tendency it is well to exclude from the bill of fare meat, eggs, and other foods rich in protein, and substitute in their place a fruit and vegetable diet largely. It is also well to drink plenty of water or other mild drinks so as to increase elimination through the kidney route. Citrus fruits are especially to be recommended at these times.

Sanitation on the Ranch.

The distribution of the various buildings on the ranch place should be made first with reference to sanitary considerations. The dwelling house should be placed at an elevation high enough to secure proper drainage if the contour of the farm affords such a site. It should also be placed so as to obtain as much direct sunshine as possible, which will minimize dampness and secure the benefit of the disinfecting power of the sun's rays. It should be placed higher than the barn and other outbuildings so as to avoid receiving the drainage from these places and far enough away to be free from the disagreeable odors and pestiferous insects which originate there. The milk house should also be placed with due regard to sanitary considerations. The situation should be as cool as possible, susceptible of ventilation, and remote from the source of odors and insects. Keep all buildings as far away as possible from stagnant water (or keep the stagnant water away from the buildings), for such water is a prolific source of troublesome insects and miasmatic effluvia. In other words, see that the situation of the house is dry, well-ventilated, sunny, and well-drained. See also that the well is so situated that the drainage from the various buildings

roundabout is not thrown in its direction, to find access thereto and contaminate its water.

HOME-MADE COOLER FOR FOODS.

The principle of cooling by evaporation of water, which is employed in the Spanish water-cooler or olla, has long been used for keeping milk and butter, meats, etc., in California. It is employed in many ways. The following is a form of cooler that is being commended from Southern States by extension workers of the United States Department of Agriculture:

This refrigerator consists of a wooden frame covered with Canton flannel, burlap or heavy duck. It is desirable that the frame be screened, although this is not necessary. Wicks, made of the same material as the covering, resting in a pan of water on top of the cooler, conduct the water over the sides and ends of the pan and allow it to seep down the sides of the box. The evaporation from this moistened covering causes a lower temperature inside. On dry, hot days a temperature of 50 degrees has been known to be obtained in the cooler. This is the way to build it:

Make a screened case 3 1/2 feet high with the other dimensions 12 by 15 inches. If a solid top is used, simply place the water pan on this. Otherwise fit the pan closely into the opening of the top frame and support it by 1-inch cleats fastened to the inside of the frame. Place two movable shelves in the frame, 12 to 15 inches apart. Use a biscuit pan 12 by 14 inches on the top to hold the water, and where the refrigerator is to be used indoors have the whole thing standing in a large pan to catch any drip. The pans and case may be painted white, allowed to dry, and then enameled. A covering of white Canton flannel should be made to fit the frame. Have the smooth side out and button the covering on the frame with buggy or automobile curtain hooks and eyes, arranged so that the door may be opened without unfastening these hooks. This can easily be done by putting one row of hooks on the edge of the door near the latch and the other just opposite the opening with the hem on each side extended far enough to cover the crack at the edge of the door, so as to keep out the warm outside air and retain the cooled air. This dress or covering will have to be hooked around the top edge also. Two double strips one-half the width of each side should be sewed on the top of each side covering, and allowed to extend over about 2 1/2 or 3 inches in the pan of water. The bottom of the covering should extend into the lower pan.

Place the refrigerator in a shady place where air will circulate around it freely. If buttons and buttonholes are used on the Canton flannel instead of buggy hooks, the cost will be reduced.

The feminine habit of dwelling on the good qualities of one's neighbor may be classed as an indoor sport.

SAN FRANCISCO.

San Francisco, June 20, 1917.

WHEAT.

Scarcity of arrivals does not seem to accentuate values, which are weak, with declines in Northern Bluestem and Red. In Chicago a depression in values is reported to be due to the promise of heavy wheat crops throughout the country, and this doubtless has had a reflex action on this market. There is very little Russian Red left and that in the local warehouses is "pinched" and of very poor quality. It is practically unquotable. Summing up, the market here is listless and unstable.

California Club, per ctt.....None offered
Northern Bluestem.....\$4.75@4.80
Northern Red.....4.55@4.60
Russian Red.....Nominal

BARLEY.

During the week there has been some speculation, causing a stiffening in values, and choice feed has advanced 5c. A partial reason for this sudden bracing up of the market may be the prospective Government demand for feed barley for the use of the cavalry. The United States Army is always a large buyer of barley in war time. Holders are cautious and unwilling to let go of their stocks.

Shipping, ctt.....Nominal
Brewing.....Nominal
Choice feed, ctt.....\$2.10@2.15

OATS.

Trading in oats is limited to transactions of a jobbing character. The attendance at the call board meetings during the past week has been so remarkably small as to indicate clearly the general apathy among traders usually dealing in oats. White feed is quotable at former prices, with no new crop offering as yet.

White feed, per ctt.....\$2.55@2.60

BEANS.

Calm pervades the bean market, and all lines remain unchanged. However, with old stocks dwindling in proportion, it seems inevitable that values will be on a higher basis before the arrivals of new crop. A considerable acreage is yet to be planted, some of which will be more experimentation on the part of comparative amateurs in bean-growing, a good deal of it planted on land altogether unsuitable for beans, the result of which will not prove to be a factor in the market. On Wednesday there was some call for red kidneys, causing a slight advance.

Tepary beans.....None offered
Garbanzos.....\$6.25@6.50

CORN.

Sales of Eastern yellow are being made for milling purposes, and the large purchases in the East for export, causing advances there, no doubt had the effect of raising values here. California corn was not able to bear up against a slackening of demand on the part of feeders, because of the extreme heat in the valleys making it undesirable for stock.

(First-hand prices on strictly first-class grain, San Francisco.)
Eastern yellow, per ctt, bulk.....\$3.30@3.40
California, sacked.....3.30@3.35
Milo Maize.....None offered
Egyptian.....3.75@3.90

HAY.

Receipts of hay for the past week amounted to 1,433 tons. Most of this amount has been old hay, placed at our market quotations. It is expected that the old hay will be entirely cleaned up during the coming week, with only new crop available. An occasional car or two of new hay has arrived, but not enough to establish a market basis. Harvesting is going on rapidly, and some little buying has been done. There is a wide range in prices paid in different localities, causing an unsettled situation that will take time for adjustment. So far the weather has been excellent for curing purposes, and the quality of the crop is good. Alfalfa of first cutting is arriving in moderate quantities and sells readily. No second cutting has appeared on the market yet, though some is expected shortly. There is likely to be no straw in the market for a month or two.

Wheat, No. 1.....\$27.00@28.00
No. 2.....25.50@26.50

Stock hay, new.....10.00@12.00
Straw, per bale.....1.00@1.10

FEEDSTUFFS.

Continuance of the extreme heat in the valleys may be expected to cause a return of feeders to millstuffs, as the green feed is drying up rapidly. This will prove a boon to holders of feedstuffs, for prices have been gradually dropping. Bran, middlings and shorts have fallen off in prices considerably. Beet pulp, on account of scarcity, has advanced. No oil-cake, tankage or rice middlings are offered.

(Per ton, San Francisco.)

Beet Pulp, per ton.....\$38.00@40.00

POTATOES, ONIONS, ETC.

There is quite a little shipping demand, which eases off the supplies, but local buyers are shy, on account of the prevailing high prices. Deltas are still offer-

THE MARKET REPORTS

Figures Given are Independent and Reliable.
Prices Quoted as Paid to Producers.

ing at former ruling prices, but there are no Salinas to be had. Oregon's are cheaper, as the call is mainly for new potatoes. The onion market is slow of movement and Delta reds have dropped in price. There is some complaint of the quality of shipments. Green onions are in heavier supply and cheaper. The old garlic is practically out and only new garlic is worth quoting. String and wax beans have improved in volume of receipts, but have declined in price correspondingly. Some fancy summer squash are arriving from the River which command as high as \$1.75 a lug.

BUTTER.

Since the drop of last week, the market has reacted, and, advancing quickly, reached a maximum of 37½ on Tuesday, owing to very light receipts. Wednesday's call, however, found a decline of half a cent; and if the hot weather continues, further declines may be looked for. In hot weather the consumption of butter, especially extras, is less than during ordinary weather, and therefore the thermometer is at this time a factor in making prices. The Eastern market continues weak, allowing of no shipping there at a profit, and dealers are forced to depend on the local market.

Thurs. Fri. Sat. Mon. Tu. Wed.
Extras.....34½ 35 35½ 36½ 37½ 37
Prime firsts.....34 34½ 35 36 37 36½

EGGS.

Extras, extra pullets and extra firsts were off a trifle on Wednesday and a

weaker feeling was noticeable. Receipts of eggs are now at their highest during the laying season, and there may be some holding back until a stronger market develops. While the market is unsettled, apparently, there seems to be no reason to anticipate any decline of moment at this time.

Thurs. Fri. Sat. Mon. Tu. Wed.

CHEESE.

Young Americas have tightened up a half-cent since last week's quotations, but flats show a decline. There is no doubt that, owing to lack of export demand, the cheese market is weak. Transactions in the market during the last few days have been light.

Y. A.'s.....24c
Fancy Calif. Flats, per lb.....21c
Monterey cheese.....16@17c

DECIDUOUS FRUITS.

Reports from the valleys state that the unusual heat is scalding some of the fruit, and all varieties are ripening very fast. Cherries have arrived in such large supply that bulk cherries are quoted at a considerable decline from last week's prices. Some plums in crates are arriving, and fetch from \$1 to \$1.25. Green apples arrive in small quantities, but they are not enough to establish a quotation. Apricots, due to difference in quality, show a wider range in price this week.

Cherries, bulk, per lb.....4@7c
Royal Anne, per lb.....9@10c
Apricots, per crate.....\$1.00@1.50
Peaches, per crate.....1.00@1.25
Figs, per box.....1.00@1.50
Plums, crates.....1.00@1.25

CITRUS FRUITS.

The demand for citrus fruits has been so great lately that prices have gone "kiting." Lemons have advanced by leaps and bounds and fancies now sell readily at \$6 flat, choice at \$5.25, and standards as high as \$4. Dealers predict that they will touch \$7 within a week. In spite of larger receipts, Valencia's have stiffened up, influenced by the advance in lemon values. Navels fetch a little better prices, but the supply of them in the market is nearly exhausted.

Oranges:
Valencias.....\$3.25@3.50
Navels, fancy, per box.....3.00@3.50
do, Choice.....2.75@3.00
Tangerines.....1.75@2.25
Lemons:

Choice.....5.25
Standard.....\$3.75@4.00
Lemonettes.....3.25@3.50
Grapefruit, fancy.....3.00@3.25

DRIED FRUITS.

Values in all lines register no change, owing to a lack of transactions. No weakness has developed, and apples are quoted as very firm, in company with apricots and peaches. Prunes are enigmatical, as no base price has yet been fixed by the Association, which plans to announce none until after July 1st. New dried apricots and peaches, should the summer be exceptionally warm in the valleys, may arrive here possibly a little earlier than September 1st.

Special Citrus Market Report

Los Angeles, June 19, 1917.

Shipments of citrus fruits from Southern California from November 1 to June 17: 29,942 cars of oranges and 5384 cars of lemons. Same time last year: Oranges, 24,155 cars, and lemons, 4583 cars.

Shipments from Central California from November 1 to June 15: Oranges, 4417 cars, and lemons, 164 cars. Same time last year: Oranges, 5390 cars, and lemons, 148 cars. The improvement in the eastern markets noted in our last review was maintained throughout the past week.

While the receipts were very good both of miscellaneous varieties and valencias that are now going forward more freely, the trade took them at good prices. The light arrivals of deciduous fruits east owing to the backwardness of the season helping the citrus market out. Lemons showed less life than oranges, the cold weather east being against the market for them. Still a fair demand was reported and prices were held steady with a week ago. The local market sympathized to some extent with the situation east, though prices here showed no improvement. A little better movement was had in all choice fruit, however. Lemons under

the very hot weather were more active than for some time, but prices unchanged. Local packers are still paying 1½¢ per pound for navel and miscellaneous oranges and 1¼¢ per pound in the grove, picked. Grapefruit still slow sale at 1¼¢ per pound in the grove, picked. Lemons, while meeting with a better demand, sold no higher as stocks on hand were good owing to the dullness of the market of late. Packers buying fairly and paying 1¼¢ per pound in the grove, picked, for the best of them. Poor stock has to be sold for what it will bring.

AUCTION SALES.

New York, June 13.—Fifty-one cars oranges and three cars lemons sold. Orange market strong and higher, especially small sizes. Lemon market unchanged. Weather fair. California navels averaged \$1.80@4.05. Valencias averaged \$2.45@4.45. Lemons averaged \$2.10@4.05.
Boston, June 13.—No market, holiday.
Philadelphia, June 13.—Fourteen cars sold. Market strong and higher on oranges; lower on lemons. California navels averaged \$1.80@3.10. Valencias, \$3.10@3.35. Lemons averaged \$1.30@4.10.

THE 1916 DRIED FRUIT CROP SOLD.

The announcement is made by the California Associated Raisin Company of the complete disposal of the 1916 crop of raisins. The peach growers' organization reported some weeks ago that all dried peaches were sold, and it is known that practically all apricots, prunes and pears have been marketed. California will produce large crops of all the above fruits this year, and prices are expected to be high. So far but little buying has been done, owing to the uncertainty occasioned by the war. Some orders for 1917 crop are being accepted by the various growers' organizations, subject to price to be fixed later. We learn that canners are paying \$75 per ton for apricots in the Santa Clara Valley, and a few lots of prunes have been purchased by brokers at about a 7c basis.

(Net to growers, bulk basis, f. o. b. shipping point.)

LOS ANGELES.

Los Angeles, June 19, 1917.

BUTTER.

Receipts of week ending June 19.....319,270
Receipts of same week last year.....273,820

There was a fair movement of butter this way the past week and the receipts ran noticeably heavier than this time last year. But with a fairly good consumptive demand and excessively hot weather and high price of feed, prices were kept fairly steady, though Eastern markets remained low and at figures that shut out shipments to those markets from the Coast, confining the market to home buying and the northern trade. Cold storage stocks here, June 14, 1917, were 205,342 pounds, against 198,136 pounds the same date last year, an excess of only 7,156 pounds. There was taken into cold storage, for the week ending June 14, 27,164 pounds, against 58,700 pounds the same week last year, showing that the trade is taking a bigger percentage of the receipts than this time a year ago.

RUBB.

Receipts (railroads) for week ending June 19, 1917, 3,045 cases.
Receipts (railroads) for week ending June 19, 1916, 2,452 cases.

Receipts continue moderate and, with a fair consumptive demand, prices the past week held steady. Even at the present high prices, eggs are as cheap as meat, which helps the market. The cold storage stocks here, June 14, 1917, were 76,547 cases, against 60,869 cases the same date last year, an excess of 15,678 cases compared with a year ago. There were taken into cold storage for the week ending June 14, 1,792 cases, against 3,103 cases the same week last year, showing that the trade is taking a greater percentage of eggs that are coming in than this time last year and there is less inclination to store eggs at present high prices.

VEGETABLES.

A slow market was had the past week for most vegetables. Receipts were good and the weather very hot and shippers did little. Peas and beans were in liberal supply and dull. Cabbage was off again and demand very light at the decline. The shipping demand has dropped next to nothing and the home trade is taking but little. Summer squash is in liberal supply, slow sale and lower, and the same may be said of cucumbers. Lima beans in fair demand, but cheaper. Okra has begun to arrive, but is selling slowly. But little corn coming in and it continues high. The best is in fair demand. Tomatoes selling fairly well, but market a little weaker. Onions are dull and lower. New potatoes coming in more freely and market lower. Demand fair at the prices.

We quote from growers:
New potatoes, per cwt.....\$2.00@2.75
Peas, per lb.....3¼@4¼c
New onions, silver skins and Ber. munda, per crate.....\$1.00@1.15
String beans, wax, per lb.....4½@4¾c
do, Kentucky Wonders, per lb.....4½@4¾c
Imperial tomatoes, 4-bskt crate, \$1.50@1.60
Cucumbers, per box of 2½ to 3 dozen.....40@50c
Green corn, lug.....\$1.00@1.25
Cabbage, per 100 lbs.....60@65c
Lima beans, per lb.....5½@6c
Okra, per lb.....6@8c

BEANS.

The planting season is about over and there was very little demand the past week even from growers and holders were inclined to shade prices.

We quote from growers:
Limas.....14½c
Large white.....15c
Small white.....14½c
Pinks.....11c
Blackeyes.....10½c

HAY.

Market quiet, but prices unchanged. Buyers, both in town and out, are holding back and buying only for immediate wants. Alfalfa is moving a little better than grain hay, though both are slow of sale.

We quote f. o. b. Los Angeles:
Barley hay, ton.....\$19.00@21.00

Oat hay, ton	20.00@22.00
Alfalfa, Northern, per ton	17.00@18.00
Alfalfa, local, ton	19.00@20.00
Straw, ton	11.00@12.00

FRUITS.

All choice stock in good demand. Peaches and apricots are coming in freely, and under the influence of increased offerings prices dropped during week. Cherries are arriving more freely and market a little lower, though demand very good at quotations. No figs on the market. A few beauty plums were in during the week and they sold in a fair way at 5@6c per pound. A few Malaga grapes were in from the Imperial Valley. They sold slowly at \$2.00@2.25 per four-basket crate.

We quote from growers:	
Avocados, per doz.	\$4.00@5.00
Cherries, black Tartarians, per lb.	9@12c
Royal Ann	10@12c
Soft White, per lb.	5@8c
Gooseberries, per lb.	6@7c

Apricots, per lug	\$1.25@1.40
Peaches, local, per lug	90c@1.25
do, Northern, per lb.	5@6c

BERRIES.

There has been a sharp advance in all berries this week. The intensely hot weather the first half of our review week cut the crop short and lowered the quality of berries. Demand fair for all acceptable fruit.

We quote from growers:

Strawberries—	
Poor to choice, 30-basket crate	\$1.40@1.50
Fancy, 30-basket crate	2.00@2.25
Blackberries, 30-basket crate	1.40@1.50
Raspberries, 30-basket crate	1.40@1.50
Loganberries, per case	1.25@1.35

MELONS.

Cantaloupes have commenced to arrive in car lots from the Imperial Valley and the quality is good. They are selling very

well at last week's prices. Watermelons are arriving more freely and the quality of the receipts improved.

We quote from growers:

Cantaloupes, Imperial Valley, stand-ard crates	\$3.75@4.00
do, Pony crates	3.00@3.25
Watermelons, per 100 lbs.	2.00@2.25

POULTRY.

A dull and lower market was had the past week. There was a rush of young stuff in and a falling off in the demand. Broilers and fryers declined 2c and sale slow. Light hens were also dull and lower. Heavy hens scarce, firm and in fair demand. Ducks and turkeys slow sale, but unchanged.

We quote from growers:

Broilers, 1½ to 2 lbs.	21@22c
Fryers, 2½ to 3 lbs.	22c
Hens over 4 lbs.	21c
Hens under 4 lbs.	13@14c
Ducks	17@18c
Geese	15c
Roosters, 3 lbs. up (soft bones)	25c
Turkeys, heavy, 12 lbs. and up	20@30c
Turkeys, light	24@25c
Squabs, live, per doz.	\$1.50@3.00
Dressed	3.75@4.85

HONEY AND BEESWAX.

The very hot weather Thursday, Friday and Saturday of last week brought the season for white sage honey to a close for the season in Southern California, and it is said the crop will not be over half.

We quote from growers:

White orange, extracted, per lb.	13½c
White sage, extracted, per lb.	12½c
Light amber sage, extracted, per lb.	9c
Light amber alfalfa, extracted, lb.	8½c
Beeswax, per lb.	32½c

Publisher's Department.

"I would not be without the Rural Press for five times the subscription price." S. H. Storey, Kern county.

Has Read It for Quarter Century.—I began taking the Rural Press in 1892 and have found it the best of all publications upon the subjects of which it treats. I would never willingly be without it.—John D. Bliss, Pozo, Cal.

The Rural Press is gaining in circulation steadily, and to be of the largest value to California agriculture must continue to increase. To make faster growth we need more field men. Two good solicitors are wanted at once to cover sections now ready. If you know of a good, live man, anywhere from 30 to 60 years of age, who has an auto and can sell papers, who would like to earn some of our money, kindly write us at once.

More than 300 new paid subscribers were added to our subscription list last week, thanks to an efficient, energetic and enthusiastic field force. May their shadows increase! The Rural Press is gaining very fast these days and every member of the office as well as field force is watching with keen interest every gain that is being made. We are looking forward to the time when the war will be over and conditions normal, that we can again use a good quality of book paper, that we may take a greater pride in our work. The large gains we are now making will enable us to issue a better paper and give better service.

The area irrigated in the Sacramento Valley and adjacent foothills last year aggregated approximately 300,000 acres. The area irrigated in 1912, according to the best available authority, was 168,000 acres, so that the area actually irrigated in this valley is comparatively small, amounting to 10 per cent of the area irrigated in the State, recent progress has been quite rapid.

Special Livestock Market Report

San Francisco, June 20, 1917.

CATTLE.—Cattle are not being offered quite so freely, with indications of a stronger market within the next two or three weeks. The shortage of good beef stuff appears to be due, largely, to the drain made on California's cattle supply for outside markets. Calves are arriving in fairly good numbers, and so nearly meet the demand that prices are not appreciably affected.

Grass Steers—	
No. 1 weighing 900@1200 lbs.	8½@8¾c
No. 1 weighing 1200@1400 lbs.	8½@8¾c
Second quality	8@8¼c
Thin undesirable	6½@7½c

Grass Cows and Heifers—	
No. 1	6¾@7c
Second quality	6¼@6½c
Common to thin	6@6¼c
Undesirable	4@5c
Hay-fed Cattle ½@¾c higher.	

Bulls and Stags—Good	6c
Fair	5½@5¾c
Thin	4@5c
Calves—	
Lightweight	9¼@9½c
Medium	8¼@8½c
Heavy	7@7¾c

SHEEP.—There is still a shortage in the receipts of good mutton stock, local demands not being fully met. Much stuff is shipped to outside markets, which explains in some measure the shortage in California. The severe weather of the past winter materially reduced the season's crop of lambs both in California and in adjoining states. Then, too, the insistence of the Government on growers to save all their ewe lambs for breeding purposes is having its effect.

Lambs—	
Yearling	12@12½c
Milk	12@12½c
Sheep—	
Unshorn wethers	11c
Unshorn ewes	10c

HOGS.—Hogs are steady on the recent decline. There are some indications of a further break in the market—probably next week.

Hard, grain-fed, 100 to 150	13c
Hard, grain-fed, 150 to 300	14½@15c
Hard, grain-fed, 300 to 400	14¼@14½c

DRESSED MEATS.—Dressed meats are in normal supply. Scarcity of feed has forced on the market many animals not in good marketable form. Prime carcasses, which are not plentiful, bring fancy prices.

Steers, No. 1	13½c
Second quality	12½@13c
Cows and Heifers	11@12c
Calves, as to size, etc.	12@14c
Lambs—Suckling	20c
Yearling	19c
Sheep—Wethers	18c
Ewes	17c
Hogs	20c

WOOL.—There is not much doing at the present time in California, the active buying season having passed some time ago. Prices have soared since most of the clip passed out of the growers' hands. It is believed by those on the inside that the upward tendency has not yet reached its limit.

Los Angeles, June 19, 1917.

CATTLE.—In sympathy with the markets east the tone of the market here the past week was rather firm. While feeders were inclined to be independent, killers here refused to bid prices up in the face of a light demand for beef, and there were

North Portland, Ore., June 18, 1917.

BEEF STEERS.—There was an active market in the beef steer division with 25 to 55 cents higher basis, the first real upturn market we have had here for about a month. There were real fancy steers in the run outside of one head going at \$10.50, a string of good California steers sold at \$10.00, fair to good kind \$9.25 to \$9.50, ordinary to medium grade got biggest advance, ranging from 25 to 55 cents, there was an excellent demand for all steers and the run was quickly absorbed.

BEEF CATTLE.—The general trend of the trade was steady, although killers were not wanting cows, they being relatively the cheapest cattle, everything here was ordinary with only a few good quality ones getting from \$8.25 to \$8.75. There was a small supply of bulls with light demand, stags sold up to \$8.50, calves were unchanged with only a few head.

STOCKERS AND FEEDERS.—Country call slack, with only a few head offered and prices generally unchanged, getting \$8.25 to \$8.75.

HOGS.—There was the smallest Monday run for years, demand still lacking with killers not wanting many, one fancy load brought \$16.25, the extreme top on all good hogs seems to be \$15. Prices unchanged with bulk of sales at \$12.

SHEEP.—The sheep market is generally unchanged, with only a few head here; quotations are: Spring lambs, \$13.25@ \$13.50; shorn year., \$8.00@ \$10.50; Shorn ewes, \$7.00@ \$9.00.

A DEMONSTRATION OF INCREASING POULTRY PROFITS.

[Written for Pacific Rural Press by Geo. H. Croley.]

In the issue of the Rural Press for May 19, 1917, we advised poultry keepers to "keep cool—that poultry keeping is still profitable." The following from a report of I. N. Foss, manager of the Tulare Co-operative Poultry Association, dated June 3, based on actual transactions of that association, emphasizes the correctness of the statement then made: "There is absolutely nothing to the far-flung cry of 'Sell the hens, for they cannot be made to pay with feeds where they are now.' As a matter of fact, the henman has nothing to kick about. The henman who mixes his feeds with brains is making more money on his May, 1917, eggs than he did on his May, 1916, eggs. [May, 1917, recorded highest feed prices ever known.—Ed.] This statement is based on cold facts and correctly given prices as shown on the records of the Tulare Association. While it is true that in the year the prices of wheat and corn have more than doubled, the price of hen feed, properly balanced and varied, have not anywhere near doubled. The May, 1917, eggs netted nearly three cents more profit than in May, 1916. The general trend is to increase the number of poultry and to plan for larger work. There never has been a time when chix have been started in such numbers as this year. The United States monthly report, just issued, shows that the producers of the entire country are receiving 32 per cent more for their poultry than a year ago, while they are receiving 65 per cent more for their eggs."

Raise High Priced Wheat on Fertile Canadian Soil

Canada extends to you a hearty invitation to settle on her **FREE** Homestead lands of 160 acres each or secure some of the low priced lands in Manitoba, Saskatchewan, and Alberta. This year wheat is higher but Canadian land just as cheap. So the opportunity is more attractive than ever. Canada wants you to help feed the world by tilling some of her fertile soil—land similar to that which during many years has averaged 20 to 45 bushels of wheat to the acre. Think of the money you can make with wheat at over \$2 per bu. and land so easy to get. Wonderful yields also of Oats, Barley and Flax. Mixed farming in Western Canada is as profitable an industry as grain growing.

The Government this year is asking farmers to put increased acreage into grain. There is now a great demand for farm laborers to replace the many young men who have volunteered for service in the war. The climate is healthful and agreeable, railway facilities excellent, good schools and churches convenient. Write for literature as to reduced railway rates to Supt. of Immigration, Ottawa, Canada, or to

Holsteins and Vetch Restore Wornout Ranch

[Written for Pacific Rural Press.]

WHEN R. F. FISHER came back from the Orient and bought his present Humboldt county ranch, four years ago, he found himself too weak to pitch hay like a man; he knew little about farming; he found that his ranch had been mostly cropped to oats for fifty years, and that it had become tired of yielding crops without return. The soil would all run together and cement. One field was worked over fifteen times before the crop could be put in decently. When that crop was mowed, the mower could scarcely get around among the clods.

Some of it is still in bad condition, for not everything can be done in four years, but most of it is producing rich crops, and Mr. Fisher can pitch hay or green vetch with the best of them. When he plows the improved part, it breaks to pieces in turning over, full of vetch nodules.

Two lines of action, startling to his neighbors, were laid out and have proved their efficiency in restoring the land to glad production. It didn't take long to figure out the need of cows to furnish manure and to eat the crops which are of necessity too bulky and heavy to haul the long distance up and down hill to town from this ranch.

He bought cows of the prevailing mixed breeds a year after moving onto the ranch, and last fall he bought half a dozen massive Holsteins at the Morris-McAlister sale, besides a couple of heifers and a bull from M. Holdridge of Modesto. A couple of purebreds bought locally were soon consigned to the butcher, for they never tested above 3 per cent and averaged 2.6 per cent. He learned that it is well to know the production of even purebreds before buying them, except in case of heifers, where dairy type and record-making ancestry must decide.

Holsteins were chosen because they appealed to him as the largest, most efficient milk-makers, and because the bull calves are good for veal. He has some fine specimens of veal on the ranch at this writing.

While there are about 100 acres under cultivation, only 18 or 20 are eligible for pasture, and "I can get more out of that by cutting for green feed," says Mr. Fisher.

COWS KEPT IN CORRALS.

The cows are not pastured at all, for two reasons. The manure is saved for the fields needing it most, and the fields yield more feed. Cows are kept in the barn all winter, turning them out twice per day for water. During the rest of the year they are milked in the barn but kept in one or more of three small corrals, where green feed is given in racks while it lasts, and silage furnishes succulence in the driest part of the season. After late July there is nothing green except a cutting or two of alfalfa and clover, until fall rains. A small hay rack load of green feed (probably over a ton) is enough for the entire 25 to 30 cows, 7 horses, and the young stock which may not be running loose on the scant hillside. Coconut meal has been added to the ration the past year, and brings good results.

THREE-ACRE MANURE EXPERIMENT.

Three acres of oats and vetch kept all of the stock supplied with two big loads of green feed per day for 29 days this spring. It is cut once

per day and gathered at the two feeding times without attempt to make or prevent it from wilting. The first cutting was finished April 17. The second cutting was half finished when seen early in June.

Mr. Fisher finished pulling old apple trees from this three acres two years ago, except on one corner. He manured all but the corner and grew a crop. Last November, after the first rain, he sowed 75 pounds Oregon vetch seed mixed with 75 pounds of oats per acre on the whole piece, after taking the apple trees out of the corner. No manure was put on the piece last fall. This June, at the second cutting, as we labored through thick vetch half way between knees and hips, it was a distinct relief to step into the scant, short-grown, sickly growth which had not been manured the year before. The first cutting had been largely grain, the second cutting was mostly vetch. Various quantities of seed have been tried, resulting in the above heavy rate of seeding.

On another wide strip across the same large field vetch and oats were planted up to a straight line two years ago. Last season, when our representative looked at this field, the oats were fairly good, but there was scarcely any vetch. Last year's vetch, however, inoculated the soil so that when seen this June vetch was a very thick stand over knee-high and oats not yet headed out. Mr. Fisher said that in two weeks the oats would be headed and would hide the vetch. Then two weeks later the vetch would hide the oats. Some of this would be cured for hay, which cattle prefer to alfalfa. Stems 7 or 8 feet long, with pods along about 30 inches, would be eaten up clean even though partly rotted by lying on the ground.

SILAGE AND ALFALFA.

Vetch and oats make the best silage, cutting when the oats are in the dough and the vetch has many pods with seeds started. But a man is required to swath it away from the mower, and it is hard to

handle. Corn has been grown three years, planting it far enough apart so it will make grain. Alfalfa has been grown with surface pipe irrigation and without it, and a piece is now being leveled for alfalfa so it can be flooded.

HANDLING THE MANURE.

Manure is hauled about once per week to the fields. The corrals are cleaned with a Fresno scraper and the barn floor and gutter are water tight. A manure carrier makes cleaning easy. The manure must be piled for awhile in the spring, but the rest of the year there is usually a field ready for it when made.

FALL FRESHENING OF COWS.

Dairymen generally admit the extra profit in having cows come fresh in the fall, but few of them do so because the weather is bad for the calves, ordinary alfalfa is not growing much, and pastures are generally too soft to permit the trampling of stock. Mr. Fisher has demonstrated by cow-testing records that fall-freshened cows, cared for by his system, produce more milk and butterfat, which sells at a higher price per pound. "But you can't get maximum butterfat or veal by turning cows and calves into the mud and rain of winter. They must have proper shelter and a generous supply of nourishing feed."

The above is an excellent picture of the grade Holstein, Alice, owned by F. Stenzel of San Lorenzo, which made the phenomenal record of 102.858 lbs. butterfat (approximately 120 lbs. butter) in the 30-day test made in the State Dairy Cow Competition for May, 1917. The scene below represents a herd of Holsteins owned in Yolo county, where the breed is becoming increasingly popular.

MONEY AND PELF.

ODDLES of money are running loose in this country and the greatest commercial and financial question is: Will those get it who have earned it? All authorities agree that the streams of wealth which are now beginning to burst forth from our resources and industries will surpass in speed and volume anything known in our history. This is the case for the whole country and California will surely be in the rush and scramble for all she is worth. Nearly seventy years ago California made the world's record in outpouring of gold, which had much to do in unsettling world's values by the volume of it. Today California is experiencing an inpouring of gold, in exchange for products, which is ten times as great as her greatest outpour of it, and in so doing California unsettles nothing and helps everything. The question, then, is, Will this gold go to those to whom it rightly belongs? Will it be money received in righteous exchange of value for value, as money rightly should be, or will it be pelf—which the dictionary says is "money in a bad sense"? Pelf, then, is money heaped up by those who have no just claim to it: money exacted by speculation, by greed, by conspiracy to avert, divert and pervert prosperity from those who have earned it by investment and industry in producing something which the world now urgently needs. Mr. Hoover said the other day that fifty million dollars a month had been stolen from producers and consumers during the period of uncurbed speculation and greedy hoarding. It was of course a guess at the amount: he might have said five hundred millions as a total, for, if such an amount has not yet been stolen, it soon will be if things are allowed to go on a little longer. As we write on Tuesday, Congress has not decided upon its enactment to insure profitable return to actual producers and fair prices to consumers, but there seems no longer reason to doubt that it will provide effective regulation. The emergency is recognized as unprecedented and the cure for it must be of like character. If the billions to be expended in this country are allowed to go for "pelf," our great nation may not only lose the war for humanity abroad but lose its own freedom at home by the creation of an aristocracy of pelf which will be worse than any overlordship of diplomatic and military ambition can be. We remember the "shoddy aristocracy" which unchecked greed created toward the close of the Civil War, half a century ago. It was about as bad as it could be, considering its size, but the preponderating vigor and righteousness of the young nation encysted and overgrew it. Since then, however, greed has learned new warfare. It has dug trenches to our social foundations and built submarines to pollute unseen the deepest waters of patriotism. In this way American plutocracy may become worse than European autocracy, because a seared conscience is more serious than a lame back.

PROTECTION AGAINST PELF.

IN VIEW of the approaching tornado of wealth which will encircle this country, it is vitally important that we should have protection against "money in a bad sense." The danger of perversion of the national conscience and of robbery of the multitude by the few is far greater than ever before in our national experience. We have come to talk confidently of billions with less concern than our fathers hesitatingly mentioned millions. We have to thank the war for the fact, however, that the national conscience is correspondingly more keen now than then, and therein lies the hope that the nation will escape what seems to us its greatest peril. We have slept during the last few decades when the menace of colossal fortunes, amassed in opposition to the public interest, has been growing. We were so drowsy that probably nothing less than the thunder of great guns on the land and in the air and sea could have awakened us to the rights of man to liberty in life and work and to the enjoyment of the full products of his labor. It is the war which has awakened a demand for immediate protection against economic and industrial wrongs in this country and creates hope for the future. How keenly we are awake is shown by a transaction in the House of Representatives at Washington last week. A member from Iowa introduced a substitute for the bill then pending which, instead of delegating food control powers to the President and a food administrator, merely made it a penal offense to hoard, monopolize, unlawfully enhance the price of, speculate in or interfere with the production and transportation of foodstuffs, fuels and "other necessities of life." The substitute was defeated viva voce, as it only received a few scattering votes in its favor. Subsequently the House showed its attitude toward the great question by passing the food control bill by a vote of 365 to 5. The remarkable awakening is shown in the fact that the substitute, penalizing food gambling, hoarding and monopolizing, would a few months ago have been looked upon as so radical that it would have been impossible of passage. At that time it would have satisfied even the most progressive foes of "cornering" as a first step in the right direction, but now it is scouted as too weak and remote even by those who would then have opposed it as radical and revolutionary! Surely "the world does move" and the war has started the movement. All the lives and all the billions which this country will expend in the war to save democracy in the world will not only do this service for the world but will fit the United States the better to lead democracy in the world.

GREAT WHISKEY WASTE ARRESTED.

IT IS NOT possible to say what has really been gained by the overwhelming vote in the House of Representatives, for, as we write on Tuesday, the whose question is in the Senate and is expected to stay there until the end of the week, if not longer. It is believed the final vote in the Senate will be overwhelmingly favorable, like that in the House, but the opponents have their rights of tongue and technicality which the constitution grants them, and they must be heard and seen, though they are in violent conflict with the popular will. One great thing seems to have been gained and that is that food grains will not be wasted in the manufacture of hard liquors during the war at least—how soft liquors will stand affected is still doubtful. In this matter the House stood firm for prohibition in these words: "No person shall use any foods, food materials or feeds in the production of alcohol or of alcoholic beverages." The House rejected the amendment which allowed the President at his discretion to regulate the use of food in alcoholic manufacture. So far as we have seen outlines of the debate, the strength of the affirmative was on the saving of food from distillation. The other line of attack on hard liquor as an agency which prevents the full production of foods is being forcibly carried by the California Farmers' Protective League, which is actively engaged in securing the enforcement of all existing laws which limit the sale and forfeit the license to sell in order that the perversion and degradation of men engaged in farm

labor may be minimized. Such impeachment of the existing liquor traffic is being pushed in all the wet counties. It is a process of back-firing which will increase farming security and larger production. It will prevent making good labor bad and bad labor worse and should command the co-operation of all employers.

LABOR'S GRAND OLD MAN.

BUT THESE ponderous impersonalities sit too heavily on our pen: we must seek relief in gossip. If we had less respect for the cause to which Samuel Gompers is giving his closing years, we might call him the "foxy grandpa of the labor unions." As, however, we do have great respect for the cause and great admiration for the way Mr. Gompers serves it, no title less than "grand old man of labor" will satisfy our printed conscience. For Mr. Gompers has sat in his offices in Washington since the American Federation of Labor (which he organized in 1882) wisely established itself in the national capital. He has sat there as puissant president of labor while a whole procession of national Presidents has passed before him and to all these fleeting personages he has given advice and consolation in all their troubles—political and otherwise. In him organized labor has had for all these years a voice which the highest in the land have listened to—whether the subject it desired to present was one of international law or the proper wage for an hour of overtime by a printer's devil. And we have admired Mr. Gompers as a man who, through all these years of action in national affairs, has always commanded respectful consideration by statesmen and politicians, by economists and sociologists, by magnates and minimists, to the end that the voice of labor shall be heard and the point of view of labor recognized. And in all that time, so far as we have heard, while standing between two great sources of wealth, he has never helped himself with one hand or the other by selling the favor of either. And such a man, trained to look on both sides of all questions and to endeavor to be just, said this on Saturday last:

The food pirates have for months been diligently profiting through the needs of the people. Speculation has forced prices and food riots have already happened in this rich country. Today speculators are trying to buy up crops before the plants are out of the ground. Speculators gamble on human needs. By creating human want, these ghouls expect to coin enormous profits. Should our Government fail to establish control before crops move to the elevators and market, the success of the war and the cause of human freedom for which the allies contend will be imperiled.

And we remark this, of course, not alone for the truth there is in it, but for the fact that the speaker lifts the voice of many millions of citizens who are organized for the purpose of having their views expressed in a masterly way. The words are almost identical in import with those carried to Washington by a delegation of farmers of the Northwest, as noted in our issue of June 9. And that delegation, hurriedly gotten together, hastily spake and scuttled for home, leaving the speculators possessors of the field. Not so the labor organizations: they have their great, trained man entrenched in the national capital, ready to shell out of their camps all who come to make cause against their cause. Surely agriculture has something to learn from labor.

RUCTION IN THE FARM LOAN BANK.

WE HAVE known for some time that all was not running smoothly in the farm loan bank at Berkeley, but have refrained from speaking of it because we had hoped it would prove only a honeymoon spat among people who were trying to adjust themselves to new relations. In the nature of things a bunch of people trying to do things in agriculture and banking, without much previous experience in either undertaking, might be expected to run amuck. So far as the conflict is, or has been, personal, we know nothing of it and have heard nothing beyond what is said in the Chronicle of this Tuesday morning, and therefore can add nothing to the understanding of that phase of the matter; and in fact we doubt if there is much of public importance in it. As, however, we have been discussing with our readers for several years the principles and prac-

tices of rural finance which this bank has been charged by law with putting into operation, we feel impelled to urge all who are expecting to make loans at the bank to believe that the troubles, which many papers are likely to exploit, do not at all impeach the principles which the institution was expected to embody in its work, nor indicate that the administrative methods which the law directs it to employ are in any way untrustworthy or impracticable. Therefore, we are quite sure that the teapot-tempest which may be raging in the local directorate, if the Chronicle is right in its report, does not reflect at all upon right ways of doing things, but may perhaps put a check on wrong ways, and the sooner that is done the better. Apart from personal disagreements, of which, as we have said, we know nothing, we have an idea that the chief source of trouble has been in the appraisal of the property upon which loans were to be made—not less than 50 per cent of the value of the land and 20 per cent of the improvements. The plan of making the local loan associations appraisers of the property without giving time enough to inform the members fully what the nature of that appraisal should be and that the appraisers, as themselves borrowers and stockholders, are liable for over-appraisal, was a mistake in administration, due apparently to too great pressure for speed in getting money into borrowers' hands, and this may have been in some measure a political purpose. At all events, the president of the Berkeley bank is credited with saying that "ninety per cent of the 6,000 applications which had been prepared before the local bank was opened had to be re-written." We presume the fact was that the local appraisers, with no appreciation of the

wrong and danger in over-valuation, had put down each other's property at prices which would shock the conscience of even an experienced real estate. They probably appraised property as if for a sale to a wide-eyed customer and not as security for a loan. If this was the fault of the speed of the Farm Loan Board, which made it impossible for individual self-appraisers to understand what they should really have done, the fact did not reduce the strain on the directors of the local bank when they were called upon to push out money speedily on appraisements which the board itself could not approve, as the law provides. If this is a correct diagnosis (for we have to trust to insight and not to observation in making it), then one can see that the local directors fell heir to a lot of trouble and the fact that they have only loaned \$145,000 so far, out of the millions they were expecting to dispense by this date, is not only an indication of their perplexities but good evidence that no wild-cat business is being done. On the whole, it seems to us that those interested in getting loans should not be depressed overmuch by the reports of conflict which are current about the Berkeley directors. Some of them probably have to learn their jobs and it is not at all sure that they have been furnished with the right tools. It is quite possible that they are trying to substitute category and tabulation for expert personal sight and judgment of the adaptation and capacity of the land offered as security. We are not saying the Berkeley bank is all right, for that we do not personally know—we are simply advising our readers not to consider it all wrong, as the current reports of troubles and conflicts might induce them to do. And they should also remember that politics never die—even in war times.

the worms attack the fruit, mining usually near the surface around the stem end. This insect was formerly considered a great pest, but it is so easily controlled that growers have less respect for it. The cure, which is very complete, is to spray just as the buds are swelling and before color shows in the bloom buds, with lime-sulphur, winter strength, and applied with good force, especially to the forking of branches of medium and small size, for the insect hibernates in the roughness of the bark at such points. As the insect wakes up and emerges with the same temperature which causes the buds to swell, it is easy to know the time to spray and to kill the pest before the point of noticeable injury.

Dwarfing Cherry Trees.

To the Editor: Have dwarf cherries ever been tried in California, and, if so, the results—not judged from the commercial standpoint? The query arises from the desire to plant, with the view of securing early bearing trees. There do not appear to be any nurseries in California with dwarf cherries for sale.—F. D. T., Berkeley.

There is no dwarfing stock recognized for the cherry as, for instance, the quince stock is for the pear. Relatively, however, a cherry on the mahaleb root makes a smaller tree than one growing on the mazzard root, which is chiefly used as a stock for cherry trees in this State. You may find some varieties of cherries on the mahaleb root in California nurseries, but the growth will not diminish to your idea of a dwarf tree. The best way to get cherries low down for garden delights is to get a tree from the nursery with the lowest start of laterals you can find, or cut back the stem a few inches from the ground, and then train the branches horizontally on a trellis (espallier of the French), pinching back all shoots which start upward, leaving only a bud or two to make leaves and fruit spurs later. By doing this and encouraging growth from the tips to continue branches horizontally, and by continuing this summer pinching, you will hasten fruiting and have your branches, ere long, thickly set with fruit clusters—a beautiful object at the cost of a lot of work.

The Black or Buffalo Gnat.

To the Editor: I am moved to ask for information relative to the little carnivorous insect locally referred to as the "black gnat." If it were left to me to designate the critter, I would say that "hydrophobia gnat" would be more appropriate. He may not be affected with rabies, yet I go mad whenever he bites me. He must belong to the order Satani-cus, rank Infernalabus, and as genius to bite you when and where you are unable to lay hands on him he is unequalled. Any information as to where he comes from and where he goes, and any method whereby one can safeguard his rights as a citizen of a free country from the unprincipled rascality of this pest will be duly appreciated.—C. E. P., Woodland.

The insect is a "buffalo gnat," or, entomologically, a simulium, described by Prof. Kellogg as "a black, stout-bodied, hump-backed, short-legged, broad-winged fly, from one-sixth to one-fourth of an inch long, with a short but strong, piercing proboscis." He comes from running water, where his larval preliminary is a "squirmy, slippery little black worm, clinging by the odd tip of its body to smooth rocks in shallow water." We do not know how to get rid of him. He will probably get even with you for calling him names.

Sulphuring Hay?

To the Editor: Will sulphur applied to hay when put in the barn keep the mice and rats away?—E. H. S., Santa Maria.

Perhaps: if you use enough to keep all other animals away from it.

California Weather Record

The following rainfall and temperature record is furnished the PACIFIC RURAL PRESS by the United States Department of Agriculture Weather Bureau at San Francisco for the week ending at 6 p. m., June 26, 1917:

Stations—	Rainfall Data.		Temperature Data.	
	Past Week.	Seasonal To Date.	Normal To Date.	Max'm. Min'm.
Eureka	31.36	46.01	68	46
Red Bluff	19.26	25.01	102	58
Sacramento	12.95	20.00	102	54
San Francisco	15.78	22.27	72	50
San Jose	12.43	16.79	88	44
Fresno	7.25	9.68	104	60
San Luis Obispo	23.03	20.51	84	48
Los Angeles	15.26	15.64	80	58
San Diego	10.13	10.01	72	58

and Address

Postal Savings and Farm Loans.

To the Editor: You gave us a very elaborate exposition last week of the reasons why postal savings deposits could not be used by the Government in lending money to farmers. Perhaps you do not know that the Government decided last April to do that and publicly announced the fact. You seem to be very successful in explaining things that aren't so.—Reader, San Francisco.

Your discovery surely belongs in the class of things said to be "very important, if true." The announcement upon which, we presume, you base your claim was this:

Washington, D. C., April 26.—A portion of the \$125,500,000 deposited in the postal savings banks of the United States has been made available to help the farmers meet the war food crisis.

The trustees of the postal savings bank system have adopted a resolution making farm loan bonds, issued under the Federal Farm Loan Act, acceptable at par to secure postal savings deposits. United States Government, Philippine Islands, Porto Rico and District of Columbia bonds are the only other bonds which enjoy this privilege.

You evidently took that to mean that postal bank deposits would be loaned to farmers and fell into the trap which was set for you—perhaps intentionally, perhaps unconsciously—by some hysterical person of which Washington was full at that date and still has some of them. In either case you were "easy." If you will climb out of the trap and look around, you will see that the announcement simply is that farm loan bonds will be accepted as collateral from those who are entitled to borrow postal deposits, viz., bankers. The way this "helps" farmers is by making a better market for the bonds which will be issued on the basis of their mortgages and that is important in helping to make the new rural credit system work. It has, however, no relation at all to the proposition which our querist submitted last week, that postal deposits, on which the Government pays 2 per cent interest, should be loaned to farmers at 2½ per cent—which we claimed could not be done for the reasons stated last week.

But it may appear that, while helping farm loan bonds by inducing bankers to buy them to put up as collateral for cheap Government money to be used in their business, the proposition may

work out to yield to bond buying bankers more benefit than it does to bond selling farmers, for the collateral will be working for the bankers at 4½ per cent all the time Uncle Sam is holding it as security. Probably this is a higher rate than any of the other acceptable collaterals is paying. In fact, if postal deposits were not subject to sight demand, and other things about them remained the same, the banker could call upon Uncle Sam to slip him over 2½ per cent on all the money he borrowed as the margin between the cost of the loan and the income of the collateral and that would be a neater transaction than to get this margin out of the community, as every healthy banker's business requires him to try to do. And if that were true, why could he not go on with it in high finance in this way?: Buy 4½ per cent bonds to put up as security for 2 per cent money with which to buy more bonds as security on which to borrow more money to buy more bonds, etc., etc. What can stop it except the exhaustion of the postal savings deposits in the process? See if you can get a Government announcement on that point!

There is an entirely different aspect of the question, viz.: postal savings for short term loans to farmers on personal security. That is not at the moment pending and we say nothing about it.

Peach Moth and Almond Twigs.

To the Editor: I am sending specimens of killed twigs from my three-year-old almond trees. The pest attacks the tips of the present year's growth and seems to have been active about ten days. I noticed last season that something killed the tip ends of some of the leaders, causing them to sprangle considerably, but I did not discover cause nor consider the damage very extensive. This season we see more of the effects. Please let us know through your valuable paper the particulars, name, nature, control, etc., of this little pest.—Subscriber, Chico.

You have to do with the twig-boring larvae of *anarsia lineatella*—commonly called the "peach moth" because of its preference for that tree, although it takes also almonds, apricots and plums. It is very small and inconspicuous and most growers come up against it just as you did, by sight of dying tips of newest growth. Later,

The Most Intercropped Young Orchard

[Written for Pacific Rural Press.]

President Wilson would be pleased to see how thoroughly J. W. Davies has been carrying out the President's suggestions to get all the food possible from the ground. Mr. Davies has been studying this problem ever since he came, inexperienced as a farmer, to his five-acre place near Willows, Glenn county, several years ago. Most of three acres are set to fruit trees, the rest is now alfalfa. Vegetables and berries have been the main source of income, which has been around \$1,100 to \$1,200 per year from the place.

VEGETABLES INTERCROPPED.

Characteristic of the methods is Mr. Davies' system of following tomatoes with potatoes and potatoes with tomatoes; and intercropping the melons. The American Wonder potatoes are ready to dig early in July. About mid-June they get their last irrigation. While the dirt is still muddy, tomato plants are set between the rows and hoed when the ground is dry enough. Potato digging cultivates them nicely. On the ground where Chalk's Early Jewel tomatoes have passed, fall potatoes are planted.

Radishes, turnips, etc., planted between cantaloupes, are off before the vines interfere.

ARRANGEMENT OF PLANTINGS.

A map of the place would show all rows running crosswise of the place 333 feet long, with a slope of 6 feet. This is too much for convenient irrigation in that ground, which cements after the first irrigation unless well worked.

The crops as seen last May were arranged as follows from one end to the other: Alfalfa; 14 rows of beans (12 fruit trees across the end of this section); two rows young peaches with raspberries in the rows and watermelons in the two centers; a row of apples with two rows of raspberries in the next center; a row of peaches with a row of raspberries and another of Mammoth in the next center; a row of mixed fruit, mostly French prunes; an open space containing seven rows cantaloupes, five rows tomatoes, one of peas, two rows of peppers, eleven rows of potatoes, and two more of tomatoes. At the upper end of this space is the chicken yard, horse, cow and calf barns, a few fruit trees, currants, grapes and Kentucky Wonder beans. Bordering the open space are two rows across the ranch of Himalayas, with currants at the end of each, then a row of loganberries and some fruit trees, mostly apricots and cherries. Two rows of loganberries fill the next center; and the next row of fruit contains fig, apricot and peach trees. Two rows of watermelons beyond them are bordered by olive, apricot, apple and peach trees, with grapes set in the row. An eight-foot strip of strawberries in the next center were full of ripe fruit early in May, but at the lower end had drowned out, so water-

melons had been planted there. Apples, apricots and peaches in the next row, cantaloupes in the next center, two rows of prunes and a few citrus trees next, with two rows of watermelons separating them in each center from the border row of black walnuts to be budded this fall. Cantaloupes reach from walnuts to road. Across the end of these rows from barn to road are the family garden, house and yard.

CULTURAL TRICKS LEARNED BY EXPERIENCE.

Many people have given up vegetable raising in that vicinity on account of the hard ground. It is little trouble if done right. Crops are sub-irrigated, not flooded, and after the first irrigation, with such a steep slope, it is necessary to check the water.

MELONS.

Four years' experience leads Mr. Davies to plant melons in hills in small furrows made with a one-shovel plow. Dirt is turned over the seeds with the same plow, and water is run through the furrow that is left. While ground is freshly plowed, water sub-irrigates to the seed without crusting the soil over them, and "all the seeds come up." Then the patch is harrowed crosswise between the hills to level it and hold moisture. Melons ripen till frost, being planted any time from late May to July.

Watermelons must be kept wet enough so the vines never wilt or the melons will "die ripe," pink streaked, stringy and tasteless.

POTATOES.

Seed potatoes always come from outside. They are planted "middling deep" and covered with a plow, leaving a high ridge over them to keep water always away from the plants. They are harrowed lengthwise two or three times while coming up to destroy newly germinated weeds. Dirt is cultivated toward the rows after every irrigation.

TOMATOES AND PEPPERS.

Tomato plants are usually budding or in bloom when transplanted, due to treatment noted in another article. They are never transplanted into dry soil to be watered at once, but a furrow is made and irrigated so the plants may be set in mud with a little dry dirt raked over it to prevent baking till the next irrigation three weeks later. Tomatoes have been transplanted in July and they seldom wilt much. Peppers are transplanted the same way.

JUNE PRUNE IRRIGATION.

W. M. Scott of Santa Clara Valley irrigates until nearly mid-July, and his prunes do not crack, but when one year a neighbor asked his advice he said: "Don't do it." The neighbor did irrigate and lost four-fifths by cracking. He had let them get dry before watering and the skins could not expand fast enough to hold the suddenly applied water.

WATER ACCORDING TO LEAF SURFACE.

[Written for Pacific Rural Press.]

A Santa Clara county cherry grower lost 850 trees over six inches in diameter from dieback in the tops, because he irrigated them about the same as he did when they were small, forgetting that evaporation was multiplied in proportion to increased leaf surface as the trees grew older. C. H. Clement has always watered copiously in March after dry winters, and every year early in July after fruit is off. When trees are young, they usually need only the one summer irrigation anyway, says he. But it is important to see that the water soaks in for each tree, since in spots it may simply run over the ground and do the tree no good.

Last year E. T. Nielsen let his gating, May 25 to June 15. He es-prunes get a little dry before irri- timates that 5 per cent cracked.

ANDERSON COMBINATION DIPPER, PERFORATOR, GRADER AND SPREADER

Send for new CATALOG of Packers' and Dryers' Machinery.

The ANDERSON COMBINATION DIPPER, PERFORATOR AND GRADER is built in the Santa Clara Valley, where the requirements of prune growers have been carefully considered and every possible advantage incorporated into the machine. Can be furnished with or without rinse tank. Made in various sizes for hand or power.

SEND FOR 1917 CATALOG.

It illustrates and describes the entire Anderson-Barngrover line of Fruit Packers and Dryers' Machinery. A copy will be sent free to all who are interested. A postcard will bring it.

Here and There in the Fruit Business

[Written for Pacific Rural Press.]

Paris Green for Pears and Apples.

"Paris green is generally half as expensive per spraytankful as arsenate of lead, and with addition of a little lime we have no burning of pear and apple foliage in our district," says F. A. Wilcox, whose orchards are in the pear district at the southern end of San Francisco bay. "Our only danger is when damp weather follows shortly after spraying."

Mr. Wilcox has used about 250 pounds of Paris green this year, though it is more expensive than usual in proportion to arsenate of lead. He uses 1 1/4 pounds of Paris green per 200 gallons of water, adding 12 to 15 pounds of lime. Quicklime is water-slacked in a separate container, about 50 pounds at a time, and strained before putting into the spray tank. More lime is used if weather seems likely to be damp. The saving even at this year's prices is about 25 cents per tankful, says Mr. Wilcox.

[Quotations on June 18 by one company for 100-pound lots were: Paris green, 66 cents per pound; arsenate of lead paste, 15 cents, and dry arsenate, 21 cents. Another company quoted dry arsenate at 21 cents and paste at 8 1/2 cents. Another company quoted dry at 26 cents. Neither of the latter two handle Paris green.—Ed.]

Tile Drainage Improved Orange Trees.

Tile drainage made a decided improvement in crop and tree growth of an orange orchard owned by C. J. Dreher in Butte county. The

trees were ten or fifteen years old before they showed the injury due to wet feet. There were spots even on high ground, where growth and color were poor and fruit was scarce, small and rough.

It was four years ago that Mr. Dreher put in the first tiling to some of these spots; and he has put in several thousand feet every year since. Some of the trees have not recovered, while others picked up in two or three years. The spots on high ground were found to be like large pot holes with impervious sides. The tile was put at least four feet deep, regardless of hardpan. Being run down the centers between rows, no damage could be noticed on the trees.

Orange roots do not disturb the tiling. Some that was laid years ago was dug up; and roots were found around it, but not in it.

Late Prune Irrigation.

To the Editor: How late can we irrigate prunes without cracking the fruit?—A. W. J., Saratoga.

Till the fruit begins to ripen, if it has been kept growing steadily and the trees have not suffered for water. The principal value of late irrigation is to rot cover crops turned under after they matured. W. M. Scott of Santa Clara county did not begin to plow his cover crop until June 18 this season and didn't expect to be through irrigating it until July 10. He finished the same procedure last year, July 10. Cultivation will conserve moisture enough to finish the crop. The danger lies in letting the trees suffer, and prune skins get slightly hardened; then irrigation will crack them badly. N. L. Lester of the same county has irrigated in August several years without cracking fruit, by keeping it growing from the start.

Almond Leaves Dropping.

If almond leaves are turning yellow and dropping so the trees look pretty thin, it may be due to lack of water, but is more likely to be due to red spiders or brown mites. Get a dust sprayer that will work on the back of the wagon and give the trees a cloud of flowers of sulphur when they are dry and the wind is not blowing. Repeat a week later, for you have already waited too long and the old insects are probably busy at reproduction. The sulphur is not so effective on them as on the younger ones. A more effective method is to spray thoroughly with atomic sulphur. This cannot hurt the trees.

Grape Standards Low.

This season Emperors, Gros Colemans and Cornichons may be shipped with 16 per cent sugar, under the new law. All other varieties must come up to 17 per cent. This is for shipment within California as well as outside. Standard crates are provided, and others must be stamped "irregular." Emperors packed in drums shall have a minimum net weight of 29 pounds and maximum net weight of 35 pounds. The common 24-pound crates must not be over 5 inches deep at the ends nor over 5 1/4 inches between top and bottom at the center when packed.

Standard double crates, half crates, lugs and drums are described.

Sulphurs Vines Dry.

One reason people fail with sulphur on grape mildew is because they apply it while the vines are moist with dew, thinks George F. Schuler of San Joaquin county, who has 175 acres of vineyard. He used to start the men sulphuring at 1 a. m., thinking the moisture would make the sulphur stick better. He sulphured three times that way one season and had the worst mildew ever. Now he won't allow sulphuring until vines are all dry. Mildew got bad in a recent season, but disappeared after one sulphuring while vines were dry.

Manure for Citrus Orchard.

The value citrus growers attach to manure is indicated by the Gillette Ranch people in Tulare county, who last February had already bought 200 tons from one man, D. J. Freeman, at \$3 per ton spread. Mr. Freeman picked it up wherever available, haul-

ing about three tons per load, and averaging a seven-mile haul. "We will use all the manure we can get," said Foreman C. H. White of the ranch.

Prune Apricot Watersprouts.

Judicious summer pruning of apricot trees which have a lot of watersprouts will benefit the buds for next year by giving them a better chance to develop, according to H. H. Ladd of San Joaquin county. In a vigorous, thickly grown tree they should be thinned out. When just enough are left, it is well to cut them back to a foot long after the crop is off. This shades the limbs and develops fruit wood where the tree is strong to hold the load.

Avoid Frosted Young Fig Trees.

Do not irrigate young fig trees late enough to have soft wood when freezing weather comes. Wrap the trees with corn stalks. Even if they freeze to the ground, they often send up a bud that will make a new tree, with good roots already established.

Have You Enlisted

in the fight to overcome the great world food shortage?

Do you want to "Do Your Bit" by making every acre of your land produce its utmost? If so you must feed your soil, i. e., increase the available supply of the elements required by your crops.

Indian Corn in Imperial.

[Written for Pacific Rural Press.]

Sam Robinson of Imperial county planted fourteen acres of Mexican June corn in July, 1911, and husked sixty bushels from two acres of it, which he measured. Several varieties of Iowa corn planted at different seasons have failed to make grain.

This crop was made by plowing barley stubble about five inches deep in June, irrigating and harrowing two or three times after weeds had sprouted. This put the medium sandy soil into excellent condition to hold moisture and kept weeds down. Thorough preparation is necessary, for many ranchers here have lost crops on account of pig weeds. Mr. Robinson vouches for at least one pig weed that grew 12 feet tall and 6 inches in diameter.

The corn was planted about eight pounds per acre, aiming to get the seed 18 inches apart in rows 3½

feet apart. It was harrowed when about three inches tall, tearing out some, but benefitting the field. It was irrigated when knee high and flooded around the stalks several times more through the summer. Mr. Robinson thinks three irrigations would be enough if the ground is filled with water before planting.

The corn did not harden enough to husk until December, after frost had killed the leaves. The husks were thick, making the nubbins look like large ears. The stalks grew eight or nine feet tall.

Although Mr. Robinson took prizes on his corn three or four years, he gave it up as a grain proposition in 1912.

Other people have had splendid results with certain varieties of Indian corn in Imperial Valley for silage, as already noted in these columns.

Sweet Potato Marketing.

[Written for Pacific Rural Press.]

There is every relation between digging and marketing, as the writer learned to his own sorrow when he lost a crop in the cellar after digging them without cautious handling. Earliest sweet potatoes bring highest prices. Latest sweet potatoes are usually nearly as high priced. Neither will keep if bruised in digging.

The first potatoes to be dug are those which seem most likely to get too large if allowed to mature, according to F. L. Landram, a pioneer sweet potato grower of Merced county and until this year a heavy grower. These earliest potatoes are dug in July, though immature, and are generally sold at three or four cents per pound in tomato crates holding a little over 20 pounds each. Later potatoes are sold in 12x12 crates, and those dug after August 1 are packed in standard 100-pound crates 12x16x about 24 inches.

There are three classes of potatoes: "hog feed" includes very slender potatoes and roots; "seed" or "canning stock" includes those under about 1¼ inches diameter; salable potatoes are those over 1¼ inches in diameter, though extra large sizes are sometimes discounted.

Heavy shipping continues from August 1 to January 1, though sweet potatoes are sometimes kept in cellars until April. If growers can get \$1 per crate, however, they do not store many. In 1915 the price went down to 50 cents. In 1916 the lowest was about \$1.15, and they were selling at \$2.50 in mid-February. Particularly careful handling is required for storage potatoes. The crop ranges from 50 to 125 crates per acre. Fifty crates generally just about pay the cost of production, according to Mr. Landram.

Well Satisfied With Sudan Grass.

[Written for Pacific Rural Press by Geo. Wiegand, San Jacinto, Cal.]

The middle of last April I sowed Sudan grass ten feet apart, ten pounds to the acre, with a drill. Sudan needs lots of water. It grew to be seven feet high, but one place where water stayed all the time it did not grow well. I cut my hay in early June, shocked it and let it lie quite a long time, and didn't think much of it till feed got short. I then hauled it to the barn. The horses nearly went mad over it. I worked my horses hard on beet land and they held up fairly well on it. I also pastured on it a while, then ended up by cutting a final crop three feet high.

My Sudan ran about nine tons to the acre. Sudan won't grow here without plenty of water, and will grow in places fairly bad with alkali, even where weeds wouldn't grow. The only trouble is in getting it started. If it starts there is no trouble after that. To start it on alkali ground, the land should be irrigated, then plowed and worked thoroughly as soon after irrigation as possible, according to ground conditions; then plant the seed immediately. I was offered one dollar more a ton for my Sudan hay than

the alfalfa by a Pasadena dairyman. I think it one of the coming feeds and will grow twenty acres of it this year.

DEVELOPING A GOOD BEAN VARIETY.

A most interesting thing noticed in endeavoring to work up a better variety of heavy producing and early maturing bean was letting the bean that was intended for seed thoroughly ripen on the vine before harvesting. The writer has noticed in many instances where bean farmers make a very obvious mistake in selecting their seed from the thresher instead of from the vine or growing a special section of more thoroughly ripened beans for their next year's seed.

Beans most generally harvested for commercial purposes are cut while still a little green to avoid them shelling out so badly before they get to the thresher. Growing from this kind gives a little slower maturing crop.

STRAW COVERING AGAINST RABBITS.

To the Editor: In common with many of your readers, I object to having my newly sprouting corn and beans go as feed for wild rabbits,

whom I regard as allies of the Germans. This happened with my first planting on land bounded on two sides by brush. Having on previous occasions had no luck with poisons and deterrents, I tried spreading over all my subsequent plantings a light scattering of straw—by no means enough to darken the seedlings but quite sufficient to screen them from rabbit-brained marauders, who now seem to regard the whole field as a straw patch. A corner which I neglected has been eaten to the ground, but where my ruse was first tried out I now have beans with pods six inches long, their tops, of course, showing plainly above the straw, but remaining unmolested.—H. C. Tracy, Hollywood.

We are very glad to get this pertinent experience. Strawing over potatoes to reduce evaporation and save cultivation is an old and successful practice under certain conditions. In that case, however, a heavier covering is used and it is put on right after planting and the potatoes have no trouble in growing through it. The lighter covering as a screen against rabbits is new to us and very interesting.—Editor.

1917 FAIR NOTES

Ventura County Fair, Ventura, Sept. 26 to 29.

Dairy Cattle Congress, Waterloo, Iowa, Oct. 1 to 7.

Kern County Agricultural Fair, Bakersfield, Oct. 2 to 6.

Tulare County Citrus Fair, Nov. 15 to 24.

Glenn County Livestock and Agri-

cultural Fair, Orland, Sept. 26 to 29. Recently organized with 16 leading farmers and business men as directors, the "cow bank" cashier as president and E. A. Kirk, a farmer, as secretary.

California GARDEN-FLOWERS

SHRUBS, TREES AND VINES

Being Mainly Suggestions for Working Amateurs

By Edward J. Wickson

Hon. President California State Floral Society

First Edition—1915

262 pages. 5½x7¾ inches; illustrated: cloth bound; 12 full-page photo-plates and numerous text illustrations.

This book aims to tell the beginner in California, whether he be a scholar struggling with his school-garden, or a suburbanite gazing vacantly on his residence lot, or the farm-home maker, who is puzzled to translate his experience with teams, plows and pasture fields into trowels, pruning-shears and lawns, just what to do to make garden-soils, grow plants and surround his abode with beauty under the peculiar climatic conditions of California.

Field and Garden Suggestions

[Written for Pacific Rural Press.]

Cover Corrugated Culverts Deeply.

The corrugated iron culvert is often so lightly filled over that passing vehicles hammer it into uselessness. A good corrugated culvert derives its strength from its construction and its durability from the purity of its material. It should be covered with a depth of earth equal to its diameter whenever possible, and even then the earth should be firmly tamped down to avoid being rutted and scraped away from the pipe which it is protecting.

The strength of arch construction is generally known. The corrugated culvert really represents a quadruple arch construction, since it is a general full circle and at the same time has the corrugated form (which is really a series of arches on the circumference). The strength is not a matter of conjecture but of long continued, practical experience. The arches and the corrugations give the culvert a resiliency that enables it to withstand, during long periods of service, the shocks and strains of road traffic.

This form of pipe is easily installed, and, on account of its general toughness, will withstand the results of careless work better than most others. In the end, however, the public pays for such negligence in increased cost of highway maintenance.

In our April 7 issue there appeared an advertisement of the Armco Iron Culvert and Flume Association in which was stated that "Armco Iron is never less than 98.84 per cent pure." This should have been "99.84 per cent."

Limas After Barley.

To the Editor: We have several acres of barley that will make some three tons of hay per acre. It is rich sandy loam, subirrigated. Can we plant lima beans after the stubble is turned under and thoroughly worked? Some say here that lima beans do poorly after barley. If so, why?—G. C. H., Downey.

Two objections to your plan are noted. Without considerable care, you are likely to leave the soil not well firmed underneath. The ordinary limas grown on the coast might keep on growing on your moist soil so you could not well harvest them before fall rains. You would be shortening the season at the beginning also. Perhaps your local seed companies can furnish an earlier maturing variety.

Lime Doubles Size of Plants.

That most of Humboldt county would nearly double its crops if lime were applied seems indicated by the various plants from various parts of the county, shown us by Secretary R. W. Werner of the Farm Bureau. A representative plant in each case had been taken from the limed part of a field and another from the unlimed part at the same time. These samples include beans, alfalfa, clover, beets, turnips, corn, barley, etc. In practically all cases the unlimed plants were less than half as large as the others.

Hurry-up Tomato Planting.

E. L. Davenport of Chino was a little rushed for time when tomato

planting fell due, so he put them in by running water down a furrow in a line where he wished to plant. As the soil was a light sandy loam, the water made a soft, slushy mud in the furrow. With a forked stick Mr. Davenport pushed the roots of each of the plants into the mud, holding the plant in his hand by the stem.

He finished the job by turning a furrow of dirt on them from each side, covering up the mud.

Beans Not Weevily.

Throughout Ventura county it is generally known that the beans there do not get weevils in them. Bean

buyers of Ventura and Oxnard bought at Nordhoff and Moorpark early last season at one cent above quotations because the beans would keep for the latest market. A good plan to avoid weevils is to keep all weeds down, even from the borders of your field, not only during the growing seasons but the whole year around. Weeds nest the weevil from year to year.

Get Water to Roots.

"The first thing when flood water leaves silt here in Coachella Valley is to flop it under as soon as you can get on it," says Bruce Drummond of the Indio Experiment Station. If you don't, it seals your soil up and your irrigation water doesn't get through it. "I am kept on the go most of the time to answer questions of people

who want to know what is wrong with their trees, truck, etc. In many cases I can take a shovel and show them that they are not getting water down to the roots."

Sudan on Coast.

Sudan grass has been tried with no success on the lowlands of Humboldt county. It needs more sun and warmth than the ocean fogs and winds permit there. But a number of patches are being tried back in the mountain valleys, where hay is much needed, and with good prospects for success.

Wheat is almost out of the question, but sprouted oats, growing Gyp corn, and cabbage are as good as the best for growing stock. Growing sweet corn is excellent too.

help balance the nation's hay shortage by planting Sudan Hay now!

Sufficient Egyptian corn and milo maize have been planted to more than meet the demand—reports indicate a shortage of hay. Sudan grass is the hay crop that will make **REAL MONEY** for you.

If you plant now under the present warm and favorable conditions, you should have a crop five to six feet high (ready to cut) in 40 to 60 days. Subsequent cuttings mature in 35 to 40 days.

The University of California bulletin says, "Sudan grass is good to look at, is easy to grow and handle, grows during the summer, gives large yield and is well liked by stock. It maintains growth throughout the season under arid conditions. It grows so tall and thick that weeds have no chance to grow."

With irrigation it will produce eight to ten tons per acre—without irrigation, up to four tons to the acre. Grows in a wide range of soils—from sand to clay."

Sudan Grass Beats Them All

This table from the University of California State Bulletin shows yield of constituents in pounds per acre from grass hays:

Kind of hay	Yield per Acre	Dry Matter	Protein	Fat	Crude Fiber	Nitrogen-free extract	Ash
Sudan Grass	8,640	6,367.7	439.1	191.0	1,794.6	3,485.2	457.5
Barley Hay	4,000	3,400.0	350.2	95.2	996.0	1,792.0	166.6
Rye Grass	4,000	3,520.0	369.6	123.2	999.0	1,735.5	323.8
Timothy	4,000	3,316.0	225.5	96.2	1,107.5	1,721.0	165.8

Reports indicate an overproduction of corn and a shortage of hay this year.

Our free Sudan Grass folder explains the wonderful features of this great forage crop. Write or call for it.

Better place your order for seed at once in order to insure early delivery.

Mechanical Power on the Farm

Users of tractors, engines, pumping plants, motor trucks, automobiles, electric motors, and other mechanical farm power are invited to make this department an exchange of their experiences and troubles.

LEVELS IRRIGATION BORDERS FOR TRACTOR.

[Written for Pacific Rural Press.]

When a good many of the California tractors run over an irrigation border in the orchard or field while pulling a load, the front end lifts clear off the ground and then drops with a jar that annoys the operator and strains the machinery. E. T. Nielsen avoids this in his Santa Clara county orchard by raking the checks down just in front of the tracks.

He bored two holes in the edge of the channel-iron frame on each side of the engine, just between it and the front wheel. A piece of channel iron was bolted to these holes crosswise of the tractor and projecting just beyond the outer edges of the tracks.

Near each end of this channel iron had been bolted four springtooth narrow teeth far enough apart to clear away the check just in front of each track, and digging only into the borders as they are crossed.

CYLINDER FIRES ONLY AT HIGH SPEED.

To the Editor: On our Ford, No. 1 cylinder will not fire unless engine is running about twenty-five miles per hour, and No. 2 cylinder has an extra heavy exhaust and crankshaft bearings are difficult to keep tight. We have tried batteries, repaired magnet, put on new carbureter and new vibrator coils, valves are timed right with piston, spark is about 1-32 past top center with spark retarded, but we do not seem to be able to get the desired results.—J. A. R., San Joaquin.

The heavy exhaust is probably due to the laziness of No. 1; and the looseness of crankshaft bearings is due to the irregular explosions of the cylinders. No. 1 does not explode except at high speed because, probably, you are losing compression either through ill-fitting valves, or past the piston, due to worn piston rings or scored cylinder.

TIGHTEN BEARINGS COLD.

[Written for Pacific Rural Press.]

The engineer on T. T. Miller's ranch in Imperial County tightened part of the crankshaft bearings of his tractor as soon as he came in

from plowing and while they were yet warm. He tightened the rest in the morning. Then he couldn't crank it. The bearings tightened while warm had contracted more than the crankshaft, being of different metal. The other bearings were found all right.

TRACTOR PUSHES LIMBS ASIDE.

The projections of an orchard tractor often catch low hanging citrus limbs and jerk fruit off. This is very nicely prevented on a 30-14 tractor being used among the lemons on the Leffingwell ranch in Los Angeles County. Heavy sheet-irons across the front shove the branches aside. Then to keep them out of the tracks, a sheet-iron shield extends from below the axles to a narrow wooden platform over the tracks. From the other side of the platform another shield slopes up against the cylinders and gas tank so there are very few chances for limbs to get caught. The upper shields are hinged to the platform so they can be laid back to get at the engine.

USES AUTO FOR WELL DIGGING.

A well 135 feet deep cost but \$35 and 20 days' labor for R. A. Grant of Ontario. A well 3 by 3 feet was dug and boarded up as Mr. Grant dug down. A derrick was set up. A steel cable and a dredge bucket were the necessary equipment. Mr. Grant ran the Ford car down a roadway from the well while the car pulled the bucket up. A neighbor's boy emptied it, and the car was backed up to let the bucket down again. The \$35 expense was for the lumber to case the well with. A four-horsepower engine runs a pump on it now and supplies all the water needed for a 10-acre garden.

A LOT OF LITTLE MOTORS.

[Written for Pacific Rural Press.]

Little electric motors are stuck around "most anywhere in C. H. Schmidt's dairy buildings in Fresno county. A three-horsepower motor chops alfalfa for the cows, so it will be eaten cleaner and can be mixed with the beet pulp and mill feeds to balance them. Another runs the separator. Another motor pumps water for the house; another pumps for irrigation of the peach orchard if ditch water should fail.

TRACTOR NOTES.

The province of Ontario, Canada, has gone a step farther than this country and has evolved a scheme for the government to provide tractors and hire them out to farmers at cost. The outfit includes tractor, three-furrow plow and double-disc harrow, and is placed upon the farm at actual cost of operation, the farmer boarding the operator while work is being done on his place.

TRUCKS FRUIT AND MILK.

[Written for Pacific Rural Press.]

San Pasqual Valley, San Diego county, is far over the hills from a railroad; yet by use of auto trucks the farmers there are enabled to market their fruit and milk cheaply. F. E. Judson is one who ships his

apricots and peaches that way 37 miles to San Diego at 10 cents per lug box with the lugs returned free. C. G. Marcus is another. He sold 800 30-pound boxes of apricots that way last year. E. H. Webb runs the truck, with which he hauls 50 to 60 cans of milk per day for dairymen all along the route, including that from his own 60 cows.

H. A. French, superintendent of the Motor Vehicle Department, announces the following figures covering registrations to date: Automobiles, 224,752, \$2,333,317.65; motorcycles, 20,498, \$41,696.91; chauffeurs, 11,544, \$14,484.75; motorcycle dealers, 150, \$754; miscellaneous, \$3,683.12; total, \$2,438,735.18.

Twenty Million Miles of Telephone Wire

The telephone wire in use in the Bell System is long enough to run from the earth to the moon and back again forty times.

The Bell System has about twice as much telephone wire as all Europe.

More than 500,000 new telephones are being added to the Bell System yearly—almost as many as the total number of telephones in England.

In twelve months the Bell System adds enough telephones

to duplicate the entire telephone systems of France, Italy and Switzerland combined.

In proportion to population the extension of the Bell System in the United States is equal in two years to the total telephone progress of Europe since the telephone was invented—a period of about forty years.

The Bell System fills the telephone needs of the American people with a thoroughness and a spirit of public service which are without parallel the world over.

YUBA

BALL TREAD TRACTORS

Low cost of farming is arrived at by using the best machinery, just as the manufacturer reduces the cost of his output by introducing improved devices.

The farmer cannot afford to waste time or money by using out-of-date methods—the demand for food is growing every day—you should take advantage of it by producing more—the way to do that is to farm with a tractor.

Write for the Yuba Ball Tread Tractor Catalogue. How many acres have you?

CRITICS' AND CUDDLERS' CORNER

Subscribers are welcome to praise or to condemn (in letters of not over 200 words) anything which appears in the reading columns of this journal. Contributors to this department may drive and counter-attack each other as they see fit without endorsement or response on our part.—Editors.

Land Owners Who Won't Try.

To the Editor: It is disheartening to notice how few land owners in this neighborhood are willing to try new things, and the large land holders least of all. Everybody is well informed on the war in Europe and on local scandals, but agriculture is mostly a matter of dollars and soil robbery. I have repeatedly tried to induce people to plant a few carob trees on those eastern foothills, also to see which eucalyptus or locusts would best succeed, but nobody seems to care to try until some crank shows them the way. His success is a guide to others and his failures are his own! It is the same with soil blasting, draining, fertilizing, subsoiling and other things which you suggest for trial. For about twenty-three years I have taken your good paper and made it a rule to put all other reading matter aside till I am through with the Press. The eastern part of the Santa Clara Valley has a clay soil and great parts of it get water-logged in the wet seasons, but deep plowing and subsoiling do wonders with it, and I think that the advent of the tractor will bring those cold soils to life, when combined with lime and cover crops. If only some of those large land owners would either come to life or die, we would be all fixed.—Arn. Mos., San Jose.

Who Wants to Be a Pomero?

To the Editor: The orchardist is not a farmer, though he uses the soil for his foundation to work with. The miner is not a farmer, though he uses the soil deeper still to work with. Why not give the producer a proper name when he is a fruit grower, just as well as when you say a man is a stockraiser who raises cattle. In order to shorten fruit grower to one word, how would it do to call him (as Mr. Frank Owen of Napa suggests) a pomero, referring to pomology, pomologist, etc., pronouncing it po-ma-ro? This has no more letters than farmer, and applies to a fruit grower. We have a good many changes these days, and why not advance on this line and properly classify the man who raises what California excels in, and not leave the fruit raiser in a general class which does not distinguish him from many others who do not add so much to the productivity and value of the land? Put the fruit raiser in the advanced position he is entitled to because he, more than anyone else, has brought attention to California and increased the State's

desirability, esthetically and financially.—F. F. Britton (Pomero), San Jose.

Foreman Wants Proper Pay.

To the Editor: What encouragement has an ambitious man to stay in farming when, after years of experience and a thorough knowledge of fruit, he can command but \$50 a month and a house that is not fit to live in? The Japanese and Chinese working under me are receiving \$2.50 and \$2 per day, which is higher pay than the man gets who has to furnish the brains for the whole combination. If white labor were paid in the same ratio, I am sure there would be no difficulty in getting and retaining good help, but when a man has made a business of farming for years, understands orchard work from one end to the other, wants to stay in it, is young, sober, reliable and a quick worker, it is discouraging to find that the Orientals are valued more highly than he. It costs almost twice as much to live as last year, without any increase in the farmer's wage.—Discouraged Farmer, Vacaville.

Are the Germans in the Sun?

To the Editor: We are doing our "bit" by raising good Indian corn on our river-bottom land, but would like the sun to not be so shy day in and out this spring. California at best is not a good corn climate, owing to the cool nights, but more heat from "Old Sol" during the day would not come amiss, if the weather man could arrange soon to send it.—Phil S. Miller, Oakdale.

Setting the Pace for a Medical Journal.

To the Editor: Your recent article on the "Automatic Septic-Tank Disposal of Farm Sewage" is so good I have a mind to swipe it entire, of course giving full credit. But just think of a medical journal going to an "Aggie" sheet for copy!—Thos. S. Blair, editor Medical Council, Harrisburg, Pa.

A Jay's Way with Jays.

To the Editor: I notice that one of your subscribers wants to know of a way to prevent bluejays carrying away almonds. The best way is to catch each one and tie his bill together with strings.—A Constant Reader, Paradise, Cal.

Driving Away with Jays.

To the Editor: Tell C. B. of Snelling to shoot a few bluejays and hang the dead bodies around in the trees where the others can see them. Also a scarecrow would assist in driving the bluejays from his few almond trees.—Earl Smith, Brooks.

All nuts that are to remain permanently tight should have the threads on the bolt cut so that they cannot become loose.

LAYNE & BOWLER PUMPS

Lift more water at less cost

JNO. F. WITHERS
REAL ESTATE
227 1 N. VAN NUYS BUILDING
LOS ANGELES CAL 3 / 26 / 16

Layne & Bowler Corp.
Los Angeles, Calif.

Gentlemen:

When looking for a good pump I at first decided that the price of the Layne & Bowler pump was too high. I installed a cheaper pump of another make. After using it for about a month I decided it for a Layne & Bowler pump, which, with the same power, lifts one-third more water than did the cheaper pump.

I certainly recommend the Layne & Bowler pump to any one wanting an efficient water supply at the least expenditure of power and expense.

Very truly yours,
Jno. F. Withers

Uni-Lectric
ELECTRIC LIGHTING SYSTEM

Electric Light for Your Farm

Uni-Lectric lighting plant generates standard 110-volt direct current; operates from one to fifty lights, electric motor, electric iron, vacuum cleaner, electric toaster, force pump, churn, washing machine, etc. No Batteries—No Switchboard—and a better machine for less money. High speed gasoline motor, generator and automatic governor, all complete in one small, compact unit. Uses standard lamps and fixtures. Simple, easily installed, dependable, economical. Costs less than other systems to buy and to operate.

Write to-day for full description and low price.

General Agricultural Review

Field Crops.

Utah will produce only half a hay crop this season.

Every harvester in the Oakdale section is now busy.

Haying is on full blast in Lassen and Modoc counties.

The Biggs Rice Mill finished the cleaning of 205,000 bags of rice for the season.

The grain fields of Tulare lake are yielding a much heavier crop than anticipated.

Unless it rains in the next week, the grain crop in Modoc and Lassen counties will be far below par.

A lot of Blackeye beans had to be resowed in the Ontario district. The later-planted beans there are doing best.

The third fiscal year of the Imperial Valley Cotton Growers' Association closed recently. The crop last year totaled \$1,250,000.

A new Coast record for barley weight is claimed by A. C. Stevens of Woodland. Two thousand sacks from the Stevens ranch were found to weigh 124 pounds each.

The harvesting of what promises to be a million-dollar grain crop is under way in the east side belt of Tulare county, comprising the Poplar, Terra Bella, Ducor and Richgrove sections.

Harvesting has begun in San Joaquin county and the crops are turning out well. Potatoes are bringing from \$2.75 to \$2.85 per hundred pounds, and barley from \$2.00 to \$2.10 per hundred.

The Federal Department of Justice has advised the California Lima Bean Growers' Association that it finds its organization and conduct of affairs entirely satisfactory and not contrary to law.

W. F. Bailey, statistician for the State Commission Market, says that potato prices will not go below \$2.50 to \$3 per cental this season. He says the demand for shipping as well as local consumption will maintain prices at these figures.

A grain fire at Montpelier, near Modesto, destroyed two combined harvesters and 400 acres of growing grain, many farm buildings and other property recently. The fire cut a swath through six miles of fields.

Records for wheat prices were established around Porterville when local brokers paid C. L. Crowe of Terra Bella \$6 per sack for 5,000 sacks of wheat of a high grade, making \$30,000 for his crop this season. Last year the same acreage brought him \$11,000.

Van Nuys farmers are rejoicing over a big potato crop, which is now being harvested, and yields of 100 to 150 sacks of 100 pounds each are being reported. Potatoes are being contracted at \$3 per cwt., which means \$300 to \$450 per acre to the grower.

The total commercial acreage under watermelon production in California this season is estimated by

the United States Department of Agriculture at 3,600. The forecast of production, based on the condition of the crop June 1st, is 1,328,400 melons.

An estimate of commercial acreage of cantaloupes to be harvested in 1917, with a forecast of production based upon the condition of the crop as reported on June 1, 1917, is as follows in California: Imperial Valley, acreage to be harvested, 9,200, yield, 216 crates; Central California, acreage to be harvested, 7,100, yield, 173 crates, a standard crate holding 45 melons.

The American Beet Sugar Company has notified beet growers in the Van Nuys district that they will pay for beets this year on a sliding scale, basing the price upon the price of sugar. In former years the contract price has been \$4.50 per ton for beets having a sugar content of 15 per cent and 30 cents additional for each per cent over that. If sugar is selling at \$6.00 per 100 pounds the grower will receive \$6.00 per ton for his beets of 15 per cent and 30 cents additional for each per cent over.

It is reported from Oxnard that the California Lima Bean Growers' Association has closed its 1917 pool. Frank A. Shippley, manager of the association, states that the association will have between 350,000 and 400,000 bags signed up this year. In addition there are 500,000 bags that have been contracted by brokers at 5 1/2 @ 7 cents, making about 1,000,000 of a crop estimated at 1,700,000 bags. The balance of the old crop, it is said, will be disposed of within the next sixty days.

Deciduous Fruits and Berries.

Napa county's prunes and pears are showing a 100 per cent crop.

Prunes, apricots and cherries were the heaviest losers by the late hot weather.

In the Watsonville district much activity is reported as the result of the high offers being made there for dried apples.

The first consignment of fruit to reach the new Prune and Apricot Growers, Inc., was from Winters, Yolo county.

Horticultural Commissioner Stokes reports that the principal part of the 1917 pear crop of Lake county has been purchased by canneries at from \$25 to \$40 per ton.

A quarter of an acre of Magoon strawberries on upland in the vicinity of Riverbank, has this year brought to the owner, J. J. Hunnewell, the sum of \$154.10.

An extra heavy crop of cherries was grown on Mr. Wassan's place, near Hilton, Sonoma county, this year. Mr. Wassan says he cannot prune his orchard heavy enough to prevent his Imperial prunes being overloaded.

Several growers in the Beaumont district, Riverside county, sprayed their apple trees during the late heated spell. They found the spray and sun had combined to ruin the

A Bigger Yield From the Same Field.

From any field that you have been manuring by the hand method you can get a bigger yield if you use the spreader method—and save much time and labor.

A good spreader tears up the manure into small particles and spreads it evenly. The manure goes farther. It can be worked well into the seed bed so that the plant roots get all of its valuable plant food. *Wasting manure is like wasting money—a good spreader makes every particle of manure count.* A Newton County, Ind., farmer testing the spreader and hand methods of applying manure on two ten-acre tracts found that the spreader method gave 120 more bushels of corn, 140 more bushels of oats and 9 more tons of clover.

The John Deere Spreader

The Spreader with the Beater On the Axle

has special capabilities for increasing your crop yields. Its exclusive features make it the ideal implement for the best method. Ask any owner of the John Deere Spreader about the way it increases crop yields and saves time and labor. After you have operated a John Deere

Spreader of your own for a year, you will fully appreciate how much these gains really mean. You'll find that the Spreader with the Beater on the Axle more than pays for itself in one year from the gains it gets on even a fair-sized farm.

The beater on the axle construction eliminates all chains, clutches and scores of other trouble-making parts. Does away with half the types of castings otherwise necessary. Does away with adjustments. Puts upkeep at minimum. Makes the John Deere Spreader exceptionally long-lived.

Beater is all steel—practically indestructible—runs on roller bearings, aiding light

draft. Beater teeth spirally arranged—tear up manure perfectly and distribute it evenly. Deliver manure close to the ground—wind does not affect spreading.

Revolving rake feeds manure to beater evenly, aiding in uniform distribution.

Shock—absorbing spring relieves spreader and horses of sudden strains.

Spreader only hip-high to top—easy to load. Big drive wheels—light draft. Ball-bearing apron drive—apron travel frictionless. Simple

gear attachment keeps weight of load from making apron race when spreading up hill.

Easy to operate—only two levers—one lever determines number of loads spread to the acre; the other starts and stops the spreading. It's so simple, a boy can operate it.

Wide-spread attachment for extra wide spreading.

Write for booklet on the John Deere Spreader.

A Special Plow for California Orchards

Plowing conditions in California orchards demand special plow construction. A serviceable plow must stand the severe strains occasioned by the soil conditions and operate close to the orchard trees.

John Deere California Orchard Tractor Disc Plow

meets these conditions admirably. Heavy lap-beam frame—laps securely joined by heavy bolts—no sagging—discs always in alignment.

Discs best quality steel—disc bearings oil-tight and dust-proof—scrappers made to stand severest strain.

Double setting of discs permits use in very hard, dry ground as well as in loose, trashy soil.

Special "Z" land axle brings land wheel parallel with rear disc beam, permitting plowing close to trees.

Special adjustment on front furrow wheel, causing it to set inside line of front disc so that plow

will work close to trees when soil is being thrown to them. Beam has special shape to permit working close to trees.

Write for free booklet on this plow.

Big Book Free

Better Farm Implements and How to Use Them

America must produce more food. Labor-saving implements will play an important part in increased crop production.

This book tells all about a full line of labor-saving farming implements. Tells how to

adjust and operate many of them. A practical farm implement encyclopedia. Worth dollars. Illustrates and describes the following machines: Walking and Riding Plows, Tractor Plows, Disc Plows, Disc Harrows, Spring Tooth and Spike Tooth Harrows, Corn and Cotton Planters and Drills, Listers, Alfalfa and Beet Tools, Grain Drills and Seeders, Riding and Walking Cultivators, Lister Cultivators, Mowers, Side Rakes, Loaders, Sweep Rakes and Stackers, Hay Presses, Grain and Corn Binders, Corn Cutters, Stalk Cutters, Kaffir Headers, Manure Spreaders, Portable and Inside Cup Elevators, Corn Shellers, Wagons, Farm Trucks and Buggies. This big book will be sent FREE if you state the implements in which you are interested and ask for Package X-1520.

You Are Interested

in farm implements that save you money. The dominant idea back of the manufacture of John Deere implements is to produce tools that are economical. This means durability, easy operation and GOOD WORK.

The name "John Deere" on an implement means that these qualities are embodied in that tool.

John Deere implements are sold by John Deere dealers everywhere

JOHN DEERE, MOLINE, ILLINOIS

ALL CANNERIES IN SOUTHERN CALIFORNIA TO RUN FULL BLAST.

Every cannery in Southern California will be operated this season. Cannery men are still contracting fruit and vegetables wherever they can be had. Some canneries that have not been opened for several years will be operated this season. The big cannery at Colton that has heretofore been idle, owned by Arthur Gregory of Redlands, will resume. It has contracted for all the peaches and apricots it can get in the upper end of San Bernardino Valley. It will also can tomatoes. J. C. Kubias, who owns a big olive factory at Redlands, will can tomatoes this season. He has given farmers nearly 1,000,000 tomato plants to insure his supply. The Yucaipa cannery will double its capacity. The big canneries at Ontario and Pomona will work early and late during the coming season. The apricot and peach crop in that district will be heavy, and it is thought fruit will run to large sizes. At Banning and Beaumont a big pack is expected, as crops in that section are heavy. It looks as though crops are not going a-begging for buyers this fall.

young fruit and losses running up into hundreds of dollars occurred. Unsprayed orchards escaped serious damage.

Visalia's green fruit picking season opened last week when the canneries and the Earl Fruit Company began the season's pack. The canneries will operate on apricots and peaches.

The Kings County Packing Company at Hanford has begun the apricot run at its Armona plant. The company will can about 750 tons of apricots, beginning with Royals and finishing with Tiltons.

The extremely hot weather around Sebastopol last week has done considerable damage to cherries and also to Loganberries. A lively run of berry shipping is expected to continue up to the middle of July.

A war tax and duty of 32½ per cent on apricots, a duty of 66 2-3 cents per 100 pounds, and a 7½ per cent war tax on prunes have been levied on shipments into Canada according to information reaching packers at San Jose.

The peach growers in Sutter and Yuba counties are informed by T. B. McKelby, organizer for the Sacramento Valley for the California Peach Growers that that organization would pay growers an average of 6c for dried peaches this year.

Chas. M. Fuller, sealer of weights and measures of Los Angeles county had arrested and fined last week a number of berry growers for selling short weight boxes of berries. The law requires that each box of strawberries and blackberries shall weigh 12 ounces.

The prune crop in the Guerneville section is fine. Some old orchards are bearing more heavily than for the past five or six years. Some of the old growers around here believe that Guerneville and neighboring sections will turn out about 350 or 400 tons.

It was generally decided at a meeting of the prune and apricot growers at San Jose recently that the commercial driers should dry on a basis of \$5.50 per ton for French, based on 25c per hour for labor; and apricots \$10.00 per ton and pits.

Government contracts have just been closed with Pasadena canneries for lots of canned goods the coming season. They call for both vegetables and fruits. It is said that 150 tons of blackberries and loganberries will be put up and that canners are bidding \$12 per ton more for them than last year, and are offering \$40 to \$60 per ton for apricots.

Geo. G. Grier, manager of a canning association in Pasadena, who has contracted for thousands of tons

of fruit in Los Angeles county, has been out among growers studying the damage to the fruit crop by the recent hot wave. He says the early blackberries and loganberries have been cut short one-half. Peaches and apricots were not seriously damaged and Himalaya evergreen blackberries escaped injury. Plums, while suffering some loss, were damaged enough to interfere with canning operations.

The deciduous fruit growers of the upper end of the San Bernardino county expect a rich harvest this year. Redlands, Bryn Mawr, Mentone, Crafton, and Yucaipa expect to make enough to recover their losses for the past two years. The apricot crop of that section is fair and in the Bryn Mawr district is expected to reach 700 tons, all of which have been contracted by A. Gregory of Redlands at \$51 per ton for hand-picked and \$46 per ton for those shaken from the trees. They will all be canned. Peaches and pears also are expected to bring good prices. In the Menton district the peach crop is put at 500 tons. Many of the orchards there are young and the trees so heavily loaded that they will have to be thinned. The cherry crop is now being marketed and they are bringing good prices. The Yucaipa apple crop is said to be very promising and is expected to be the largest in the history of the valley.

Citrus and Semi-Tropical.

To avoid root-curl on young avocado trees Hart & Barber of Puente are planting straight from seedbed to the open field, and avoid pots which is said to cause root-curl.

The new olive processing and oil extracting plant which is to be built at Lindsay this summer by the California Associated Olive Growers' Association, will cost \$30,000, it is said.

Experienced orange growers of Visalia declare that the dangers from the usual "June drop" among the navels has passed, leaving excellent prospects for the forthcoming navel crop in Tulare county.

The outlook for oranges is good says P. H. Norton of Redlands, manager of the Redlands Co-operative Orange Association. He is just back from a trip through the Middle West and Canada. He says he found business conditions good.

Lyman M. King of Redlands, who appeared before the Interstate Railroad Commission in Washington to protest against the blanket increase of 15 per cent in freight rates asked by the railroads, says the men who represented the citrus industry before the Commission believe that oranges and lemons will be exempt. J. A. Stewart of the Mutual Orange Distributors Association of Redlands who was also in Washington at the hearing, says that the Southern Railroads have made a request of the Commission that the 15 per cent increase be reduced to one per cent on citrus fruits.

The California Walnut Growers' Association in a circular letter sent out June 22, states that the recent hot wave damaged the growing walnut crop in Santa Barbara county 5 per cent, Los Angeles county 25 per cent, Orange 35 per cent, and Ventura 20 per cent. The damage to the entire crop will be close to 25 per cent. As the prospect was for the greatest production on record the State will apparently ship as many walnuts as were marketed last year. The Association will handle a larger part of the crop than last year, as new associations have been formed at Walnut Creek and San Juan Capistrano.

Grapes.

On account of unsettled conditions relative to transportation, few of the Lodi fruit companies are contracting for Tokay grapes this year.

The grape crop in Fresno county from all indications, will be better than ever before and all crops are developing in a most favorable manner.

Miscellaneous.

Yolo's estimated crop production is \$13,144,783. The total acreage under cultivation is 267,860.

Reports that high school boys have proved inefficient as farm laborers in Southern California, are denied today by the State Council of Defense.

Investigation of the insect problems of Merced county will be undertaken by Prof. E. O. Essig of the entomology department of the State University.

Convinced that alien enemies are trying to set fire to fields of grain in Butte county, Superior Judge Gregory last Monday called a meeting of the County Council of Defense to discuss methods of combatting the danger.

Despite widespread belief that California faced a serious farm labor shortage, the farmers of the State have not called on the public employment bureaus for harvest hands to any extent, according to a report issued by C. B. Sexton, superintendent of the State employment bureau.

The extreme hot weather, Thursday, Friday and Saturday of last week in Southern California hurt the fruit crop very materially. The exact extent of the damage, however, is not yet known. Apricots in the low lands, it is said, suffered heavily, while those in the foothills stood the heat much better. The berry crop has been cut short. Walnuts, it is said, stood the heat better than anything else.

Word comes from Washington that

the first issue of the Farm Loan bonds will be offered to the public about July 1. From \$100,000,000 to \$150,000,000 of the bonds bearing four and a half per cent interest will be issued probably within a year. The twelve Federal Land banks, through the Farm Loan board, have concluded an arrangement with a group of investment bankers under which one half of the issue up to \$30,000,000 during the next six months will be marketed by the bankers. It is understood that the bonds will be sold at a premium.

Holsteins Adapted to Diversified Farming

Last week we announced that the Pacific Rural Press prize for May in the Dairy Cow Competition was awarded to F. Stenzel of San Lorenzo. Of the seven prizes awarded since the beginning of the contest six have been won by Holstein herds. The Stenzel herd has been well up toward the head every month since it was entered. In April, it was a close second to the winning herd. The May record was a remarkable one for a grade herd. The five cows averaged 84.64 pounds butterfat, average test 3.9 per cent. "Alice," the top cow, made 102.853 pounds (128.5 pounds butter) test 4.3 per cent. She was the only cow in the entire contest, grade or purebred reaching 100 pounds. She is 6 years old and the record was made in the third month of her lactation period.

J. J. Sullivan, manager of the herd, did the feeding. The ration

to beef, and to this class must we look for any increase in meat production. While doubtless more money would be made by feeding strictly beef type animals, yet in many instances the small feeder can not secure these when he can handle them to best advantage. But, he can get young and old dairy stock, and the Holstein has the largest frame to carry the meat. Some one has said that in buying meat at the butcher shop that we buy—beef.

Although the Stenzel herd contains such excellent grades as shown in the prize group, it is being gradually worked over to purebreds. Of the 120 cows now in milk, more than 50 are registered Holsteins. One of these, Pauline Inka DeKol Kate, a 6-year-old, calved May 25, and on June 6 completed a 7-day test with a record of 30.1 pounds, test 4.4. Her daughter by Dutchland Sir Pietertje

Pauline Inka De Kol Kate—6 years old. Calved May 25. On June 6th completed weekly test of 30.1 lbs. butterfat. Test 4.4.

consisted of 25 lbs. malt and 10 lbs. dried beet pulp per cow per day in addition to green alfalfa.

Although the Stenzel herd is a comparatively young one, it has been developed to a high state of production, the average for the entire herd being over 4 gallons per day, testing well over 3½ per cent. Mr. Stenzel believes in close culling. He says he chose to breed Holsteins for two reasons, first because he likes them best, and second because both the males and females that do not come up to his dairy requirements make good beef. He will not sell to another dairyman an animal that is not good enough for his own herd.

In saying that Holsteins make good beef, Mr. Stenzel helps to answer the question that has been in the minds of many farmers of late. There are in every section of the State farmers who can raise extra feed and market it through feeding

Creamelle, has a record of 24.43 pounds made as a senior yearling.

The sires used on both purebreds and grades have high production and high test breeding back of them. Besides Dutchland Sir Pietertje Creamelle, whose first ten daughters in milk have records at 2 years or younger averaging 20 lbs., there is a son of King Segis, and another is a son of King Korndyke Sadie Vale.

The Holstein herd fits well into the scheme of diversified farming of 1000 fertile acres of the Stenzel ranch. There are 200 acres of orchard, mostly pears and cots, 80 acres of currants, 100 acres of field crops, peas, rhubarb, tomatoes, etc., 100 acres of alfalfa, 100 acres of barley (looks like 30 sacks per acre now), 125 acres grain hay, and the balance marsh pasture. The cows consume the pasture and hay, and furnish fertilizer for the field and orchard crops.

Convenient Milk-Cooling and Shed Outfit.

A concrete-floored, 36 stanchioned milk shed rests on level ground, just below the separator and aerator room. Then, still higher on a small hill, sat a 200-gallon water tank of metal, with wet canvas hanging around the sides, with overhead a thatched roof. The water is piped to the cooler, and runs through and on out to a large tank at the high end of the milk shed. This tank trough serves two purposes—the cows drink from it and afterward the water is used to slush out the shed. The manure, water and all is not wasted,

but runs out into the irrigation ditch and on to the alfalfa. This equipment is in operation at the San Pasqual Ranch Company's place, San Diego County.

WEIGHT OF MILK.

There is no legal standard for the weight of a gallon of milk, but in order to compare the weight and measure of milk, 8.6 pounds has been taken by dairy authorities as the weight of a gallon of average testing milk. This would make one quart weigh 2.15 pounds.

Dutchland Sir Pietertje Creamelle's

Ten First Daughters in Milk have average records of 20 Pounds as two-year olds or younger.

MARIE CLOTHILDE PONTIAC CREAMELLE
Junior 2 years old record: Milk 391, Butter 22.52, Test 4.6 per cent.

Two of These are California Champion Two-Year Olds

PAULINE INKA DE KOL CREAMELLE
Senior yearling record: Milk 423.4, Butter 24.43 lbs., Test 4.62 per cent.

This wonderful record is convincing proof that this young herd sire transmits his big production and high test breeding.

You Need Some of His Blood in Your Herd

To bring up your butter fat production and increase your profits.

I am offering a few young bulls sired by him, out of big producing dams, and just ready for service, at reasonable prices.

New State Dairy Laws

[From summary by Secretary F. W. Andreasen, State Dairy Bureau.]

Two dairy bills have been signed by the Governor and will become effective next August.

All persons who desire to sell milk, cream, butter, ice cream or any other dairy products, except cheese, and who have not a proper pasteurizing plant or who do not expect to install one immediately should at once apply to the State Veterinarian to have their cows tested. After such an application has been filed in the State Veterinarian's office these persons can sell their product until the State Veterinarian has made the test.

The Satterwhite bill, in addition to the provisions of the 1915 pure milk law which provides that all milk must be from tuberculin tested cows unless it has been pasteurized before it reaches the consumer, provides that all butter, ice cream, and other dairy products except cheese shall be manufactured from milk or cream which has been obtained from cows that have successfully passed the tuberculin test or from cream which has been pasteurized.

Butter which is the product of untested cows and made from cream which is not pasteurized may be sold and used in the manufacture of food stuffs but must be labeled "for baking and cooking only." This butter shall be subjected to a temperature of 225 degrees Fahrenheit in the cooking.

All milk sold, except in bulk to the wholesale trade, shall be graded as under the 1915 pure milk law but no person shall label or sell any milk

as "Guaranteed milk," "Grade A milk" or "Grade B milk" unless he has been authorized by some milk inspection department approved by the State Dairy Bureau to do so.

All tests of cows for tuberculosis must be made by the State Veterinarian or one of his deputies or supervised by him or one of his deputies. It is the duty of the State Veterinarian to mark indelibly the reacting animals by tattooing the ear with the capital letter "T" one inch long; also to cause all reacting animals to be excluded from the healthy animals.

Dairies having not more than two milking cows and which are found by the inspecting departments to comply with the remaining provisions of the act shall be exempt from the scoring and labeling requirements.

All dairies, except those having not more than two milking cows, producing market milk or cream to be sold for table use must be scored by the milk inspection department.

Table cream must be graded the same as milk but the maximum bacterial count may be twice as great as that of the corresponding grade of milk.

The score card which must be used by the milk inspection departments in scoring the dairies is printed in the law and is the one now used by the State Dairy Bureau.

[Summary of Rose bill will be printed next week.—Ed.]

The De Laval Line

Acme Feed Cutter and Silo Filler

THE ONLY STEEL FRAME CYLINDER CUTTER ON THE MARKET

The steel frame is strongly riveted. It can't warp, as does the old style wooden frame. All bearings and shafts are held in rigid alignment at all times and vibration and wear reduced to a minimum.

BUILT FOR CAPACITY

The large throat of the Acme Feed Cutter, the Automatic Feeding Roller and the improved design of the traveling feed table, gives the machine ENORMOUS CAPACITY and makes it EASY TO FEED.

Knives are of special steel ground on the inside, spiral in shape and produce a uniform, perfectly cut silage that packs well in the silo.

BUILT IN SEVEN SIZES

The wide range of sizes make it adaptable to all cutter requirements.

THE ECONOMY OF CUTTING DRY FEED

The coarse hay usually nosed out and wasted by stock will be entirely consumed as food if first run through an Acme Cutter. You can actually make a saving of \$3.00 to \$5.00 per ton by this method.

ALFALFA MEAL

The Acme Alfalfa Meal Attachment enables the production of an excellent grade of alfalfa meal at a cost not exceeding half the cost of baling.

IF INTERESTED IN THE ECONOMICAL PRODUCTION OF STOCK FEED, SEND FOR CATALOG ON ACME CUTTERS AND COPY OF THE DE LAVAL DAIRY HAND BOOK (a veritable mine of dairy data). A postal will do.

Imperial County Indian Corn Silage.

[Written for Pacific Rural Press.]

Does Indian corn grow successfully in Imperial Valley for silage? It does.

Will silage keep in good condition through the hot Imperial summer? It does.

Can a barley crop be successfully followed with Indian corn and milo for silage? It has, very satisfactorily, for G. V. Rude on the A. J. McPherin ranch in Imperial County, with twice the tonnage per acre that milo made.

Barley was irrigated, disked, smoothed, and planted as soon as possible afterward, both Indian corn and milo being planted July 10. Eleven acres of Indian corn (white Mexican) yielded 160 tons which was siloed October 25 and 26. It was planted flat and furrow-irrigated when knee high a month later. Another irrigation was given about September 10 and still another about 10 days before siloing. Each irrigation took 12 hours with a three-foot head. When ready for the silo, the top tassels and husks had

turned, though the stalks and leaves were green. The corn was in heavy dough stage, some being glazed and some dented. A 3/4-inch stream of water was run in with the cut silage, and it made a feed which the cows cleaned up better than the milo silage.

The greener you get alfalfa into the shock after it is dry on the outside the better the leaves stay on, and the better feed it makes. There is no danger of mold, if it is allowed to cure enough in the shock.

Do You Want Long Distance Backing?

We have a son of the California State Champion three-year-old for sale. Born October, 1915; Sired by PRINCE ALCARTEA KORNDYKE, whose dam is TILLY ALCARTEA.

The Dam of this young bull is not a fifty-pound cow, but she has to her credit 21,208 pounds milk and 860 pounds butter in one year, which is the largest record ever made in California by a Junior three-year-old.

If you are in the market for a bull, it will pay you to visit our ranch and see what we have to offer—at prices that will surprise you.

J. S. GIBSON CO., Box 97, Williams, Cal.

Live Stock and Dairy Notes

Livestock breeders all over the State are invited to send on postal cards, notes regarding their sales, State and County Fair intentions, new stock, etc.

The Dairy.

The Eighth Annual Dairy Cattle Congress is to be held October 1st to 7th inclusive, at Waterloo, Iowa.

The Government proposes to take the entire output of butter produced by the Loleta plant, Humboldt county.

The average price paid for cream by the creameries tributary to Hanford for the month of May was 39c, the total payroll being \$240,000.

Gotshall and Magruder of Ripon, report that Hengerveld Pietertje, the senior four-year-old, has just completed a record of 25.3 pounds of butterfat in seven days on official test.

Cheese making is being given more attention in Tulare county recently, as a result of the agitation for a greater production of nutritious foods. A cheese factory near Poplar has been started.

The Hollister plant of the Alpine Evaporated Cream Company commenced last week to can milk. Heretofore the milk which was condensed at Hollister was shipped to the company's plant at Gonzales for canning.

At the New England Ayrshire Club's consignment sale held at Springfield, Mass., June 14, 8 bulls and 46 females sold for \$34,870. The seven-year-old imported cow, Douglass Hall Violet, topped the sale at \$2,500.

San Jose dairymen want to raise the price of milk to a point where they can make some profit. Owing to war conditions and to short crops of hay and feed the situation of the dairymen is said to be critical in the extreme.

Giffle Gat, 22921, an Ayrshire cow owned by A. F. Spooner, Richville, N. Y., has completed a five-year cumulative Advanced Registry record with an average of 12056 pounds of milk, 500.86 pounds butterfat with an average test of 4.14 per cent.

F. Stenzel of San Lorenzo has sold to C. A. Beecher of Stockton the 15 months old Holstein bull, Dutchland Maria Clothilde de Wit 4th. This handsome youngster is a brother of a former State champion 2-year-old, and half brother to the present State champion.

At the Consignment Sale of Ayrshires by the New England Ayrshire Club, held at Springfield, Mass., on Thursday, June 14th, the average price for those catalogued was \$646 and six young things from one day to three weeks old sold for \$610.

The highest price for a female was \$2,500, paid for Douglas Hall Violet, "34934," imported and consigned by Hunter & Montgomery, Lessnessock, Scotland. The highest price paid for a bull was \$1400 for Lessnessock Sir Robert, "12992," imported and consigned by Hunter & Montgomery, Lessnessock, Scotland.

A note from the Bridgeford Company of Knightsen says: "It may be of interest to your readers to know of the official records we have made this past season, which we

consider very satisfactory. We tested eight cows five years old and over that made records of 31.72 to 24.38, the eight averaging 27.58 pounds butter in seven days. Also tested seven heifers from three years to four and one-half years old that made records from 27.72 to 22.60, the average being 25.21 pounds butter in seven days. Our six two-year-olds averaged 18.02 pounds butter in seven days. At the present time we have in our herd twenty-eight cows and heifers with A. R. O. records.

Beef Cattle.

It is said 400 cattle were shipped from the Porterville district last week, worth \$40,000. This brings the estimated value of cattle shipments up to date at \$600,000 for the year.

A shortage in wild feed for grazing purposes in the Tulare district and a consequent overloading of the cattle market are the cause of a slump in prices according to F. D. Campbell a local livestock buyer. Many fine young calves that normally would be kept until grown are now being sold.

At the Bellows Bros.' Shorthorn sale at Marysville, Mo., on June 14, eight bulls averaged \$1,678 and 43 females averaged \$1,033. The two-year-old bull, Rosewood Reserve, son of Fair Acres Sultan, sold for \$8,100, topping the sale. The bull was bought by Mrs. J. E. McAuley, Becket, Mont.

Swine.

M. Elwood Gates, Brentwood, Cal., reports the sale of two Berkshire sow pigs.

J. L. Gish, Laws, Cal., reports the sale of Berkshire boars to E. A. Frey, Exeter, Cal.

Butte City Ranch, Butte City, Cal., has sold four Berkshire pigs to C. O. Jordan, Colusa, Cal.

W. M. Carruthers of Mayfield, expects to show a dozen Berkshires at the fairs this season.

Whittier State School has sold the Berkshire bred sow Longfellow's Robin Belle 41st, to F. G. Wells, Delta, Utah.

The University of Nevada, Reno, Nevada, has sold three registered Berkshire boars to the Western Meat Co., San Francisco, Cal.

Edwin R. Shelden, San Francisco, Cal., reports the sale of eighteen Berkshire sows to the James Mills Orchard Corporation, Hamilton City, Cal.

Hans Duveneck of Ukiah reports the following sales of hogs: Bred sows to Theo. Mathis, Ukiah, and Williams Bros., Potter Valley; sow with litter to F. G. Batchner, Ukiah; boar to W. H. Whisler, Ukiah; four open gilts to E. A. Ford, Ukiah.

Two Berkshire sales of note are scheduled for August. The Carruthers Farms of Mayfield will, on August 1st, sell fifty head of sows and boars, including their show

herd. On the day following, at Escalon, A. B. Humphrey will offer a lot of sows and gilts of Grand Leader strain. California, as well as Coast breeders, will be interested attendants at these two sales.

Sheep.

It is reported that three wagon-loads of wool arrived recently at Alturas from Surprise Valley belonging to Henry Stephens of Fort Bidwell and Lasague brothers of Eagleville, which sold for 50c per pound, bringing \$15,000.

Livestock Miscellaneous.

Ray C. Hannan, Corning, Cal., has sold the boar Los Champion to Robert Kimble, Hanford, Cal.

With the assistance of eight new deputies soon to be added to the working force of his department, State Veterinarian Charles Keane is preparing to launch the most systematic and extensive campaign ever undertaken in California for the purpose of conserving the livestock supply. This campaign is to be started early in July.

2nd Annual Sale BERKSHIRES

CARRUTHERS FARMS MAYFIELD, CALIFORNIA

WEDNESDAY, AUGUST 1st

— 1 9 1 7 —

Sows are bred to Ames Rival 100, son of Rival's Champion Best; Iowana Rival Majestic 3d, a son of Rival's Champion; and Mayfield Champion, son of Ames Rival 70th.

44 Sows and 6 Boars

In this sale will be included ten sows and two boars, comprising the best show herd that has ever left Carruthers Farms.

Entire Show Herd will be Sold

The Best in Holstein Bulls

BY PROVEN SIRES AND PROVEN DAMS

The best interests of your dairy or breeding herd demand that your herd sire be bred in great producing and transmitting blood lines. You are safe in heading the herd with a son of one of the following well-known sires:

KING MEAD OF RIVERSIDE

Sire of the State Record cow, AAGGIE ACME OF RIVERSIDE 2D, 35.38 pounds butter in 7 days; 142.23 pounds in thirty days, and 885 pounds in seven months, strictly official test.

PRINCE GELSCHER WALKER

Sire of a number of state record heifers, including MISS VALLEY MEAD DE KOL WALKER, 36.75 pounds in 7 days as junior three-year-old; LADY HISKE WALKER, 34.25 pounds in 7 days as junior four-year-old.

SEGIS PONTIAC DE KOL BURKE

Sire of the finest lot of heifers we have ever owned. Three of the first ones average over 21 pounds butter in 7 days. Their type is unexcelled.

We offer sons of these sires out of dams with records of 25 to 30 pounds and yearly records in proportion. Write us your wants. Information and pedigrees on request.

A. W. Morris & Sons Corp. WOODLAND, CAL.

THE RURAL PRESS BROUGHT THE BUYERS.

The letter following, received from M. H. Tichenor, manager of the recent Vina Ranch Holstein Sale, and his statements endorsed by Vanderlyn Stow, Business Manager of Stanford University Trustees, gives the Pacific Rural Press pleasure in printing. The dispersal sale was a success in that every sale was bonafide and many new people were in attendance and bought stock, thus giving it wide distribution. Here is the letter:

"Permit me, please, at this time to express my appreciation of the great part played by The Pacific Rural Press in making the dispersal sale of the Stanford herd of purebred Holsteins at Vina the big success that it was.

"A large number of the purchasers at the sale advised me that they had been attracted to the dispersal by the advertisements and the reading notices they had seen in your publication.

"It was gratifying to note that The Pacific Rural Press and nearly all the other publications devoted wholly or in part to the livestock industry were ready and willing to do their part to advance Holstein breeding on the Pacific Coast. As a result of the co-operation extended, Leland Stanford Jr. University and myself as sale manager, 300 head of Holstein purebreds have been distributed among the herds in Oregon, Nevada and California, and lasting benefits have been made possible in the dairy and breeding work in the West.

"You should indeed feel proud of the work you are doing in your field."

Morris & Sons Sales and Records.
A. W. Morris & Sons of Woodland report the following recent Holstein sales: Geo. E. Spencer, Blythe, Cal., a son of King Mead of Riverside out of a dam with a yearly record of 810 lbs. butter, and she a three-quarter sister to Aralia De Kol. E. Susaeta, Valparaiso, Chile, a beautiful son of Segis Pontiac De Kol Burke out of Miss Blaney, 1008 pounds butter in a year. She is the dam of Miss Dutch, 30.05 pounds in seven days and 1025 pounds in a year. C. W. Lewis, Merrill, Ore., a good son of King Korn-dyke Pontiac and Ethel of Riverside, 801 pounds of butter in a year. Pacific Portland Cement Co., Cement, Cal., a son of King Mead of Riverside and Contenta Creamcup, 811 pounds butter in a year.

The test season is over and we have little to report in late records. Aagie Acme of Riverside 2d will soon complete her first eight months' official test. She has 710 pounds fat to her credit in seven months. Miss Dutch 2d has just made 26.70 at 4 years and is doing nicely in yearly test. As her dam and grand dam are both 1000 pound yearly cows, we hope to make this the first instance of three generations of 1000 pound cows, as so far as we can ascertain there are none on record at this time.

State Dairy Cow Competition for May.

A large number of dairy herds and individual animals were represented in the May State Dairy Cow Competition, conducted by Prof. F. W. Woll. Over 250 cows were entered in this noteworthy contest, and the records made were creditable to all the participants. The average production of the cows for the month was: Milk, 1309.7 pounds; butterfat, 53.660 pounds; and ranged from a minimum of 17.954 pounds to the remarkable achievement of the cow Alice, a Holstein grade, owned by F. Stenzel of San Lorenzo, which produced in the 30-day test 2552.3 pounds of milk, testing 4.03 per cent and 102.858 pounds butterfat. This cow is five years old, and was 51 days in milk at the time of the test. Mr. Stenzel was the winner of the Pacific Rural Press prize, offered for the highest production of butterfat for a herd of five grades. The winner of the McAlister & Sons' prize for the month, offered for the highest production of butterfat by a grade cow, was won by the Napa State Hospital, that institution's Monte 1st, a grade Holstein, showing up with 97.183 pounds (Stenzel, 102.858, being barred).

The butterfat percentages as a whole took a wide range, running from 2.59 per cent for a Holstein up to 6.9 per cent for a Guernsey. However, many of the cows on test which showed a low percentage of butterfat gave a very high production for the month. On the whole, the results of this Statewide contest are very satisfactory, as both the statistics of production and the butterfat percentages show a strong upward trend.

The Bureau of Fisheries, Department of Commerce, says whales and porpoises are mammals, like cattle and sheep, and their flesh is "meat" not "fish." In texture and appearance it resembles beef. It is devoid of all fishy taste. Fresh whale meat has been placed on the market in Seattle, Wash., and Portland, Ore. It met with a ready sale at 10c a pound and was placed on the menus of the hotels and restaurants under its proper name.

LIVESTOCK DIRECTORY.

Rates in this directory, 3c per word each issue; or if carried weekly for one year, 2 1/2c per word.

SWINE

Sour Buttermilk for Calves.

[Written for Pacific Rural Press.]

Feeding sour buttermilk to calves was practiced in Denmark 30 years ago when L. J. Lindrum was a boy, so when he got a chance to do it for himself last spring he tried it out on a dozen calves, as some other dairymen in his district are doing.

"They are the nicest calves in Humboldt County, I think," said he when questioned as to the value of sour buttermilk. "I have just turned them out to grass at about three months old. They had fresh milk (a mixture of colostrum and other) until three or four weeks old. After that, the bunch got 225 pounds of sour buttermilk every day till I turned them out. They had some hay the first month; but were turned onto ryegrass and clover pasture when we changed to buttermilk; because just then the weather cleared. I didn't even make a gradual change to the buttermilk but gave them a good feed the first day. They took to it quick, and never did have the scours or other troubles. I didn't increase the quantity as they grew because they kept

so fat and sleek. They are now rolling fat like veal.

"The buttermilk is pasteurized while still in the cream; and instead of containing only perhaps 1½ hundredths of 1 per cent of butterfat, it may contain 3 or 4 tenths of 1 per cent. There is nothing like butterfat to make a calf sleek.

"The buttermilk was always delivered sweet, but I dumped it into barrels where there was a little left from the previous feeding. That would act as a 'starter'; and in warm weather, it would be sour within 12 hours. We are not bothered by flies in this country—seldom see any even around a creamery. The barrels never got rank or foul smelling.

"The trouble with feeding sweet buttermilk is that you must take pains to keep it sweet always. If occasionally it does sour and the calves are accustomed to it sweet, they get the scours and may lose their appetites and be set back for a week."

CHOPPED NEEDLEGRASS HARMLESS.

To the Editor: How can we feed alfalfa mixed with needle grass? Its beards go through the cows' jaws and get into their eyes. I would rather have foxtail.—B. M. B., Corning.

G. H. Harmon of Tehama County fed 60 tons of first and second cutting alfalfa last winter to his sheep. They would scarcely touch it in the regular hay form, but cleaned up 2¾ pounds per day per ewe after he chopped it to half-inch lengths. No soreness was found; no other feed was given between September 20 and February 10; and the 160 ewes had 175 lambs this spring. Chopping your needlegrass would seem a promising expedient for your cowfeed.

SKIM MILK TO PUREBRED HOGS.

One of the few people in Humboldt County who feed skim milk to hogs is Nate Hauck of Alton who separates the milk from his 10 cows on the ranch rather than send it to the creamery as is customary. While farmers generally consider it more profitable to sell their skim milk to the casein factories, Mr. Hauck finds the opposite to be true with his small herd of big type Poland Chinas. This is because they are registered and of the square-built, blocky type desired

by pork makers. They are built to make best use of good feed as contrasted with hill-bred hogs fattened over a year old. His yearling herd boar is a splendid specimen and won second prize at the State Fair last fall. Spring gilts took 4th and 5th prizes, and four pigs of a litter took 4th prize. The Poland-China competition last year was good and strong. Some 30 fine thrifty pigs remain from the spring farrowing by the five registered sows Mr. Hauck has kept.

BRONCHO GRASS.

To the Editor: The grass you recently sent me for identification is an introduced species from Europe and is known to botanists as Giant Brome grass. Earlier works on grasses call it Bromus giganteus. More recently it has been called Bromus villosus. By the ranchers it is very frequently referred to as needle grass or broncho grass. As you no doubt are aware, it occupies a very large portion of the vacant lots in Berkeley. In early spring, where on account of its abundance it is of some value as feed for the tethered cows. Very soon, however, it becomes unpalatable and when the seeds are formed with their sharp callus pointed ends, they are really harmful and pierce the mouths of stock, similar to foxtails. It is one of the grasses that I think we could well get rid of without suffering very

much even in these days of high cost of living.—P. B. Kennedy, Dept. Grass and Forage Plants Investigations, Berkeley.

We have mislaid the name of the sender of the above described speci-

men. As we remember it was from the upper Sacramento Valley. The species is, however, unfortunately widely distributed in this State.—Editor.

BASSETT'S POLAND CHINAS

For many years at widely separated shows, under many different judges of varying type ideals, my Poland Chinas have been consistent prize-winners. My herd is large and I cull closely. The animals sent out as breeders are the very tops of a large number. I KNOW that my kind of Poland China is a profitable farmer's hog, for I send carloads of them to the packer every year—uniform in size, high in quality, quickly and economically matured and finished.

Guernsey Bull Ithen Daisy's May King of Langwater 17349. Purchased of Florham Farms, Madison, N. J., by B. E. Nixon, to be added to his herd at Yountville, Cal. Price paid was \$8,000. This bull will be a valuable addition to the Guernsey sires on the Western Coast. His sire is Dolly Dimple's May King of Langwater 12997, an Advanced Register grandson of Imp. Ithen Daisy 3d 15630, A. E. 100, whose records are 534 pounds of fat at two years and 714 pounds of fat at four and one-half years.

A Boost for the Coyote.

To the Editor: A law was passed in Sacramento last winter making the destruction of ground squirrels compulsory and placing the enforcement of the law with the County Horticultural Commissioners. The supervisorial boards of the various counties, in their efforts to handle their finances economically, are overlooking their best bet. As an example, one of our semi-mountainous counties in 1916 paid for the scalps of coyotes the sum of \$1,805. In that county there are practically no sheep, and the depredations of the coyotes were principally on the poultry and pigs of a few mountain dwellers and could not have been over \$4 or \$5, whilst the loss from squirrels and rabbits on range and fruit trees must have been so many thousands.

In 1885-6 few coyotes were in the Coast Range, and in those years Napa county was almost bankrupt by paying a 5c scalp bounty on squirrels. Four men on the Redington stock range poisoned and scalped in one month 11,000. Later, with coyotes plentiful, the rodents disappeared almost entirely, while today, with coyotes worth \$10 and \$20 each, the squirrels are again a menace. The lesson is obvious. The \$1,805 bounty mentioned jacked only \$170.90 of equaling the salary and expenses of the Horticultural Commissioner for that county in 1916, or \$1,975.95. I have seen as many as 25 coyotes in a band in Modoc county, and yet sheep and goats are leading industries there, and coyote killing discouraged because of their value as exterminators of rabbits and squirrels. Why not let individuals guard their flocks more closely and permit coyotes, foxes and wild cats to hunt the ranges unmolested and thus save the ranges, orchards and grain fields, so valuable today?

Napa, Cal.

AN OBSERVER.

FRESH HOG WALLOWS.

[Written for Pacific Rural Press.]

Hogs generally need wallows in hot weather, says John F. Myers, the Berkshire man. They are not able to cool off by perspiration; since their only perspiration is through the three openings inside each front leg. That, and their covering of fat which holds the heat, is why hogs die so easily from overheating. A cement wallow cleaned regularly, or a mud wallow supplied with running water is desirable and sanitary.

While the advisability of having hog wallows is beginning to be questioned, there is no doubt that where they are used they ought to be kept fresh. And in the present farm conditions it is unfair to one's hogs or to those of his neighbor's to let them wallow in irrigation ditches and let the water run on to the next herd. Sam Robinson of Imperial county avoids this by running settled water from his reservoir through a ditch to the hog pen on a side hill. It passes slowly through board-bottomed wallows and on to the river. On level ranches it may be possible to drain the wallows to certain fields with profit to all concerned, and safety to the next neighbor's hogs.

TWENTY-CENT MILK PROFIT-ABLE HOG FEED.

To sell milk for 20 cents a hundred to casein factories or feed it to 14-cent hogs. That is the question many dairy farmers are undecided on but not L. L. Long of Stanislaus county. He feeds hogs.

This spring Mr. Long conducted an experiment with 18 head of highly bred Chester White and Poland-China pigs to see whether he was warranted in selling his skim milk at the prevailing price.

The pigs were fed skim milk and "gyp" corn and run on a small fox-tail pasture as soon as they were weaned, and marketed at an average weight of 160 pounds each. Four of them were only four months old at the time and the others were five months old.

Careful account was kept of the milk and grain fed to the lot, the skim milk being charged for at the rate of 20 cents a hundred and the "gyp" corn at \$2.30 a sack.

A total of 5,000 pounds of skim milk was fed to the lot and 50 sacks of "gyp" corn, making a charge of \$100 for skim milk and \$115 for corn or a total of \$215, not allowing for pasture which was poor.

When sold the hogs brought 12 cents a pound at the ranch or \$327.60 for the lot, showing a margin of \$112.60 for labor, interest, etc.

VETERINARY QUERIES

[Answered by Dr. H. B. Winttingham, Petaluma, Cal.]

[Subscribers wishing an immediate reply should send money order for \$1.00. No charge for questions answered through this department. Name and address of subscriber must accompany each query.]

A Lazy Bull.

To the Editor: I wrote you a question concerning a lazy bull about eight or nine days ago. Please answer immediately.—G. F. J., Oak Bar.

If this animal will not breed, he does not fulfill the requirements for which he was purchased, and as such ability on the animal's part constitutes an implied guarantee, the seller can in most cases be made to replace the animal. Responsible breeders are only too glad to do this. In case you wish to treat the animal, there is a preparation of Yohimbine sold by an Eastern house at a cost of \$10 which might help the animal.

Lambs Have Sore Mouth.

To the Editor: My sister and I have twelve motherless lambs. When we got them one had a small dark-colored scab on its mouth and now it has spread all over its mouth in large, puffed-out sores, which bleed but no matter runs from them. One of the others is taking it now. Please tell me what to do to check it.—H. M. G., Yerington.

This is necrotic sore mouth. Paint the sores several times a day with a mixture of equal parts tincture iodine and tincture iron. Feed those affected with a separate bottle and be sure to boil all bottles between feedings.

Not Necessarily Tuberculosis.

To the Editor: If a cow coughs once in awhile, is that any sign she has tuberculosis? How can a man have a cow tested for tuberculosis? This cow is a young, healthy-looking cow, but she coughs occasionally. Can I send her milk away to have it tested?—W. T. J., Stent.

A cough of this kind does not indicate tuberculosis unless associated with other symptoms. The test is given by the injection of a few drops of tuberculin test fluid in the skin below the tail. The milk is never used as a means of detecting the disease.

Horse in Bad Condition.

To the Editor: I have a large horse, about ten years old; has had sore shoulders for over a year; cannot get them healed up. Every little scratch he gets seems to fester. He has also had the grease heel all this time. I have tried different remedies without effect. His breath also has a bad odor.—C. H. E., Turlock.

The animal is evidently very much out of condition. Give him one dram doses of potassium iodide dissolved in water three times a day over a period of at least three weeks.

Sweeny.

To the Editor: By accident I destroyed the copy of the Press that contained a remedy for a sweeny in a horse's shoulder. Will you kindly send me that copy or a copy of the remedy itself?—J. L. McD., Lemoore.

The hypodermic injection of a few drops rectified oil turpentine in several places over the shrunken area is almost a specific. It is recommended, however, that a qualified veterinarian do this.

Test This Cow for Tuberculosis.

To the Editor: I have a dairy cow about twelve years old and within the last month she has become very poor. She eats and chews her cud but stands around and acts as if she had some foreign substance in her throat. Opens her mouth and lolls her tongue around every little while.—I. C., Visalia.

Have this cow tested for tuberculosis before instituting further treatment.

Cow Has Tuberculosis.

To the Editor: My milk cow has a lump slowly forming in the back part of her udder, close to where the hind teat joins the udder. It has taken several months to get about as large as a .44-caliber bullet. Is there a cure for this?—E. J. A., St. Helena.

Have this cow tested for tuberculosis.

ORCHARD VETCH FOR COWS.

[Written for Pacific Rural Press.]

Vetch in the old three-acre apple orchard belonging to Nate Hauck of Humboldt county, among many such orchards, makes heavy growth in spite of the shade of the interlocking branches. It is cut for green feed for the cows; and would make two cuttings per season if the first one should come before blooming. That, however, is inconvenient in a soiling system, and Mr. Hauck thinks the immature vetch has too little value.

INCREASING MEAT PRICES

The prices of meat animals—hogs, cattle, sheep, and chickens—to producers of the United States increased 1.2 per cent from April 15 to May 15; in the past 7 years prices decreased in like period 1.2 per cent. On May 15 the index figures of prices for these meat animals was about 48.4 per cent higher than a year ago, 74.2 per cent higher than two years ago, and 71.1 per cent higher than the average of the past 7 years on May 15.

COOLNESS

There's nothing so cool as an oil stove for summer cooking. All the heat is concentrated on the cooking and not radiated about the kitchen.

Cooks everything any wood or coal range will cook, and cooks it better, because of the steady, evenly-distributed heat.

Use it all the year 'round—more convenient than a wood or coal stove, and more economical.

The long blue chimneys prevent all smoke and smell.

In 1, 2, 3 and 4 burner sizes, with or without ovens. Also cabinet models. Ask your dealer today.

Poultry for Profit

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

THE THREE-DAY POULTRY COURSE AT POMONA.

Last week the three-day study in the care and breeding of poultry was given. In a lecture on the housing of poultry, Prof. Dougherty showed by charts just what he meant by a house that was "hen comfortable." This is a shed roof house with tight roof, three tight sides and open front built so that it gets winter sunshine, is well lighted and well ventilated, without being draughty. He advocates tight floors, of cement when convenient, and it should be convenient to work in and cost but little. He had charts showing the results of some very interesting experiments. They apply especially to the class of people who read these items—the farming and small ranching class. But one experiment alone will show that the man who has land for his poultry to run on, even partly natural, can make a much better profit, with half the labor and cost, than the man who shuts them up and feeds everything from the store. When a man has to hire a part of his work done the cost of labor makes a big difference. The profit is with the man who has range for his flock and has a flock that, when he gets ready to sell, will weigh up something like a dollar or a dollar and a half each hen.

There were a number of questions asked Prof. Dougherty that brought out some valuable information, especially on the feeding question. The feed question was thoroughly threshed out but no substitute for the grain ration was offered, nor for the mash, except to help out with green feed. One important point brought out in the discussion was in reference to animal food. The experiment station has tried out the system some poultrymen have been using of feeding 30 per cent animal food in the form of fish meal and beef scrap. It is found that with 7 per cent they got just as many eggs as when they fed 30 per cent, but the best results came from using buttermilk and leaving out the beef scrap and fish meal.

Quite a number of poultrymen came in from outside places, some from Riverside, Ontario, and even Santa Ana registered and everything was listened to very attentively. The poultrymen of Southern California are wideawake and anxious to know all that is for the betterment of farm poultry or intensive poultry keeping.

THE TRYING HOT SPELL.

The extremely hot weather we had last week end calls for great care in looking after the flocks. Plenty of ventilation, shade and clean, cool water will save the day where the neglect to provide either one may mean disaster.

All around the southern counties there were many deaths of grown fowls reported and large numbers of rabbits; many of these could have been saved by taking proper precautions. Sunshine is good in its place, and we all have been anxious to have some of it, but we surely got an overdose this last hot spell. I went out when the mercury was up at 110 and wet my chicken yards, gave everything fresh water, and tacked up

gunny sacks to keep the glare of the sun from any exposed yard, and I am glad I did. My loss was too little bantam hens that were too fat. But this should make everybody more diligent in getting things into comfortable shape so that with the least amount of effort chickens can be given needed care. Don't be afraid of the fresh air; it's good for them. Close, crowded coops are neither healthy nor comfortable, neither are they profitable. And that is the chief object in keeping a flock of chickens. There may be a few who keep them for fancy purposes, but the number is small, we all want to make a profit on our investment and labor, and the biggest profit comes from giving the flock the very best care possible.

A BAD CASE OF TICKS.

To the Editor: I have some chicks about two months old. I notice they are covered with some kind of ticks. These ticks are in bunches as large as a dime. The heads seem to be buried in the flesh. The chicks have never roosted with or near other chickens, but roost with their mother away from all other fowls. I tried putting coal oil on some and it killed the ticks and the chickens too. Can give me a remedy?—Mrs. T. W. McC., Terra Bella.

Make an effort to spray the ground where the chickens run because that is where the ticks are, and if you rid the chickens of one lot another lot will take their place. It will be best for you to dip these young chicks during the warm part of the day, and put them in a wire coop with some straw for a floor to dry them off. Take one tablespoonful of Creolin to a quart of warm water and make as much as necessary, at this ratio, to immerse the chick in overhead. It won't hurt any part of the chick; the only thing is to do it when they can be dried off quick. Then clean up, burn all rubbish likely to harbor the vermin and spray your grounds and buildings with any good commercial spray or with crude oil and crude carbolic, one pint of the latter to 1 gallon of the former.

Purebred and Commercial

[Written for the Pacific Rural Press by Harry Mortenson, Suisun.]

THE MOLT.

The better an egg producer a hen, the later in the season she will molt. During this period she discontinues, to a large extent at least, the business of egg production while she is assuming her new garb. Hens that shed late take less time to molt, while those that molt early lay more early winter eggs but hens that molt late lay more eggs during the year. The oldest feathers drop out first. Chicks and hens feather more quickly in such areas as might affect the vital parts. Experiments at the various stations have proven that chicks from incubator to laying period experience four molts, either partial or complete.

RUSHING THE MOLT.

Attempts have been made to hasten the molt in various ways. It has been found at Cornell and Pennsylvania that starved hens lay less eggs at a greater cost after the molt than those fed normally during the molt. Food should not be decreased since heat supplying foods are necessary and the feathers themselves are largely protein and require generous supplies. It is a good practice to furnish an

extra amount of oily feed, such as old process, linseed oil meal and sunflower seed, which by the way is one of the cheapest grains. An abundance of granulated bone to furnish phosphates. Feather making demands nitrogenous food. There appears to be about 13½ pounds of mineral matter in the bodies of 100 Leghorn hens and 125 pounds in the eggs which they normally produce. The quantity of feathers was estimated at 4.53 per cent of total weight of the fowl.

Body—Nitrogen, 3.45 per cent; ash, 3.8 per cent.
Feathers—Nitrogen, 14.10 per cent; lime, .138 per cent.

Eggs—Nitrogen, 1.76 per cent; ash, 9.7 per cent.

The experiments at Cornell proved that it does not pay to force the molt and it is apparently the best policy to let the hens lay when they will.

POULTRY MANURE.

It has been estimated that the night droppings average 30 pounds per hen per year. While off the roosts the average is probably 45 pounds per fowl. If preserved without needless loss, the droppings from 1000 birds would probably be worth at least \$300.

In these days of high price feed, the poultrymen should raise a lot of green stuff. To produce tender succulent greens we must fertilize and for this purpose the straw and sweepings from the yards should be used. Apply water to force the vegetation in order to make a pleasing salad for "Biddy."

A WORD AS TO QUERIES.

We receive inquiries from time to time that are very indefinite. It is almost impossible to make an intelligent reply unless we know what you want. If your hens are not doing well, possibly we can help you out. But be sure to state definitely how you are handling the flock. The same holds true in case of disease—state the symptoms as clearly as possible.

CULL, CULL CULL!

Now is the time to begin. The best flock in the world needs culling. Poultry business today is not an easy game. Allow no "star boarders." Ship them to the market. If you have only a few, eat a hen for Sunday dinner. At the present price of meat, poultry is cheaper than beef.

OLD IRON SPOON RANCH SPEAKS UP.

Dear Editor: Please excuse an old No. 7 Remington machine, new ribbon, and a sure 'nuff bum operator, but here's hoping that the very tender words of appreciation that follow will make your consideration worth while. I had the luck to be able to read the Press for a long time for nothing (low down trick), but since moving here have been a subscriber. Couldn't get along without it. 'Nuff said. But this is tough on you, as your advertisers have reaped the benefits of your good work.

Your paper has seemed to steer clear of fake ads, so I generally take a try at your advertisers when they have anything that I need. I don't know Croley, the feed man of Frisco, from a hole in the ground, but met his goods through your columns and made my man here supply me with some, and so in my mind Croley is as strong as his fish meal, which is going some, as it is darn good feed.

The immediate cause of this outburst is your coming to life on the poultry page. It really seems as if

your man Barnum might have by chance whispered in your ear some of my sentiments. When I saw the old boy tramp two miles through a wash to get a neighbor of mine for a subscription, and land it while he was trying to get reason into a 60-horsepower gas pump engine, I thought just enough of Stranger Barnum to look at him again and wish him luck.

I am a poultryman—alive and paying my bills. It means the same anyway you read it, front or backways. White leghorns bred to lay, regardless of stained ear lobes or off-colored feathers. The ordinary papers do not give the commercial pointers. Think the Pacific Rural has started something.

Here is an idea in a few words: Offer a string of small gold coin or free advertising space in your valuable paper as prizes to commercial poultrymen. What new truth, trick or trade-winner have you learned this year as your best new poultry wrinkle?

The leading poultryman of any community knows what his neighbors are doing and all of the town folks and outside ranchers know what he is doing, but what are the other big fellows doing? Poultrymen are a queer lot of "bugs," but they are good fellows at heart, and this thought may be a leader in shaping your policy for the new page. Wishing you all kinds of luck with your "real" Rural Press.—William T. Hadley, Old Iron Spoon Ranch, Ontario, Cal.

Poultry Breeders' Directory

Rates in this directory, 3c per word each issue; or if carried weekly for one year, 2½c per word.

BABY CHICKS—HATCHING EGGS—White, Brown Leghorns, R. I. Reds, Barred Rocks; sturdy chicks from well-mated fowls; prompt, efficient service. Write for circular. Campbell Poultry Ranch, Campbell, Cal.

BARRED PLYMOUTH ROCKS—Winners at leading shows and wonderful layers. Choice stock for sale. "Nothing better in poultry." Catalog free. Chas. H. Volden, box 398, Los Gatos, Cal.

INCUBATORS—For Essex Model incubators at factory prices, write Geo. H. Croley Co., Inc., Poultry Supplies, 631-637 Brannan St., San Francisco.

CHICKENS, DUCKS, GEESSE, GUINEAS, Pea Fowl, Pigeons. Wm. A. French, 545 W. Park St., Stockton, Cal.

WHITE PLYMOUTH ROCKS—Hatching eggs from splendid layers. Mrs. J. B. Tupper, Route A, Ceres, Cal.

EASTMAN'S BRED-TO-LAY Barred Plymouth Rocks. Fairmead Poultry Farm, Fairmead, Cal.

BRONZE TURKEYS—Albert M. Hart, Clements, Cal.

Some Popular Uses

Formaldehyde kills flies, purifies stables, stalls and milk cans, kills disease germs in kennels and chicken houses and clothing. It is a deodorant for refrigerators, sinks, drains, cesspools.

FORMALDEHYDE

"The Farmer's Friend"

officially endorsed by the U. S. Dept. of Agriculture as the greatest and most scientific seed grain cleanser the world has yet known. Destroys smut and fungus growth in seed grain, prevents diseases of potatoes and other vegetables. Write for big instructive Hand Book to-day—it is FREE.

Mrs. Best's Letter.

SUITABLE SUITINGS FOR GIRLS.

My Dear Friends: I am wondering if all of my readers know about the Junior departments in the large stores. This is a department for girls from twelve to eighteen, where you can find suitable garments for a girl even if she is as large as her mother.

To show how important two of the large stores in the city consider it, they are having their stores remodeled with an entire floor devoted to the needs of the miss.

On this floor can be found all wearing apparel suitable, including corsets, and all intimate garments.

The styles shown here are always girlish and individual without being freakish and what is most interesting, the prices usually run lower than for the same grade of garments in the women's department. This is an advantage that many small women take advantage of as well.

I had occasion this week to go through one of these departments and such good looking things as I did see. There are wonderfully attractive light suits of velour, nearly all with a check or plaid design, and beige color basket weave as well as the very popular jersey cloth in white and colors. These suits are almost all in a modified Norfolk style well suited to the figure of the growing girl. Nearly all are belted, some of the same material and others with broad black patent leather belts that snap together in front. Many of the skirts are box pleated, stitched down from the waist line to well over the hips and then allowed to swing freely open. Nearly all of these suits have pockets, large patch ones on the coats and smaller inserted ones in the skirt. In the separate skirts of wash goods, the models are simple, gathered back and front with pockets in many varied designs. The separate wash skirt is proving its popularity this year for wear with the lingerie blouse and the many varieties of middies. A skirt of white with middy of blue or some bright color is very good style for informal beach and mountain wear. The new middies are much longer than the regulation garment and much fuller as well.

Wash dresses are always good style for girls and I certainly saw some attractive ones. In linens, rose, blue and brown seem the most popular colors and they are all made in loose models hanging from the shoulders with a belt that is an ornament alone, but does not confine the garment at all.

Many of these belts are in self colors with hand embroidery and others are of broad black velvet ribbon, placed loosely around the waist, with ends hanging down the back. The collars and cuffs are many times of a contrasting color as the blue linens will have tan collar and cuffs and the rose will have green but always with a little touch of hand work.

Ginghams in bright plaids are shown in simple styles—some of them with pleated skirts of plaid and Eton jacket effects in a plain contrasting color scalloped all around the bottom. These have small, white turnover collars worn with a soft tie.

For lighter, more dressy garments,

there are dotted swisses, white net and voiles both plain and striped and white pique with hand work.

But there is almost an entire absence of ruffles or trimmings of that type. All skirts end with a simple hem and all collars are tailored in style with a hem or picoting at the edge so that the plainer the garment, the better style it seems to be.

ROSABELLA BEST.

SAVE YOUR BOTTLES.

Every housekeeper is urged to save all wide necked bottles to use for putting up preserves, jellies and jams. Fruit juices can be put up in ordinary bottles. In this way, regular jars and cans can be reserved for canning vegetables, soups and meats.

There threatens to be a serious shortage of regular jars and cans this season, so this saving and utilizing of bottles is important.

The fruit products named will keep perfectly in these bottles if sealed with corks and paraffin. Any receptacle of glass, crockery or porcelain may be sealed in this way.

CANNING GOOSEBERRIES.

Gooseberries canned in a heavy syrup make good sauce or pies. They should be picked while green and have stems and blossom end removed and blanched in hot water. After cooling with cold water, pack into jars and add rubber and cover and sterilize. The syrup to be added should be of equal parts of sugar and water.

Gooseberry preserves are made by cooking the gooseberries until tender and then adding cup for cup of sugar and cooking until a deep red color. This is delicious with meat.

LOW LIGHTS.

Of all the things that make a room unhomelike, and unattractive, there is nothing any worse than a high light, especially if it be unshaded.

The strain on the eyes in reading or working by such a light is tremendous; but that is not the only bad feature. To give the room a homelike look, the light must be low, on stand or table, throwing a pleasant light on the family circle. A soft, colored shade makes a much more useful light than a clear, white one.

DRYING VEGETABLES.

The home canning specialists are not only urging that everyone can products, but that such products as apples, pumpkins, squash and the like be dried, reserving the jars and cans for the products that cannot be conserved in other ways.

THE HOME CIRCLE

PICKLED WALNUTS.

Editor Home Circle: Will you print the following recipe for pickled walnuts for Mrs. E. A. F., Sebastopol, taken from an old English cook book?—Mrs. J. H. B., Glendale.

Gather the green walnuts before the shell forms inside and as near of a size as possible. Scald them and then rub off the top skin, soak in brine, strong enough to float an egg, for 3 days. Drain, soak again 3 days, drain, soak again for 4 days, making 10 days in all to be in the brine; using fresh brine each time. Mix equal parts of black pepper, ginger, Jamaica pepper, a little less cloves and a few blades of mace. Add 1 cup of white mustard seed to $\frac{3}{4}$ cup of the mixed spices. Boil some vinegar 10 minutes together with 20 whole pieces of ginger, 1 clove of garlic to each $\frac{1}{2}$ gallon of vinegar. Put nuts in jars with the first named spices well strewn through, then fill the jars with the vinegar, when quite cold and cover. A little of the vinegar imparts a fine flavor to stews and hashes. A little brown sugar can be boiled in the pickle if a sweet taste is preferred.

Mrs. E. R. F., Santa Clara; A. M. A. of Santa Clara and E. H. of Vacaville also sent recipes that were substantially the same, except that they boil the spices and vinegar together instead of sprinkling them over the nuts and repeat the boiling for three days before the nuts are put away. They also drain the nuts well after being in the brine and put in the sun to darken.

HOME MADE LOGANBERRY JUICE.

The simplest way to make loganberry juice is to put the berries in a granite pan or preserving kettle and nearly cover with water. Heat nearly to the boiling point, but do not boil. Stir occasionally and crush the fruit to extract the juice. After the fruit is soft, strain through a cloth jelly bag, allowing the mixture to drip thoroughly. Put the juice back on the stove, adding one-third sugar by measure. Heat again to near boiling and bottle. Drive the corks in tight and cover with paraffine. This is a heavy juice and must be diluted before drinking. From one-half to an inch of this juice in the bottom of a glass of water will make a drink of sufficient strength. In making punches, the addition of the juice of four lemons to a gallon adds to the flavor. Some people like a richer syrup and that can be made by adding eleven pounds of sugar to each gallon of juice instead of adding one-third of the measure. This is especially good for punch with the addition of lemons.

CHERRY PUDDING.

Make a plain cake batter as follows: 1 cup sweet milk, 1 cup sugar, 1 egg well beaten, 1 tablespoon butter creamed, enough flour to make stiff batter, 2 teaspoons baking powder, beat well. Butter cake pan having tube in center; put in layer of batter, thin layer of cherries, etc., having batter on top. Place pan in light steamer over boiling water and steam until well done. May be tested like cake, will probably take 1 hour. Either canned or fresh fruit may be used, but it must be drained and juice used to flavor the following sauce: Work 1 tablespoon flour thoroughly with 2 teaspoons butter; add enough sugar to suit taste, juice from cherries, juice from 1 lemon, pinch of salt, season with cinnamon; cook until thick.

Good Health.

[By H. E. Pastor, M. D.]

Fasting as an Antidote to Feasting.

A very effective remedy for many of the ills of life is fasting, within limits. Perhaps more bodily ailments are due to unrestrained indulgence in food than to any other cause. This fact is widely recognized and is an old-time belief. So strong has been the faith of many peoples in the benefits to be derived from abstaining from food, either wholly or in part, for extended periods of time, that the practice has been incorporated in the religions of many civilized peoples. That the practice has intrinsic worth there can be no doubt, though occasional fanatics who have entertained extreme views on this subject have tended to bring it into disrepute. However, the remedy costs nothing; indeed, you can save money by taking the treatment. If you are troubled with dyspepsia or bowel derangement it might be well to give it a trial. Its good results may surprise you.

Hay Fever (Rose Cold).

Hay fever is a very refractory disease to cure. In rural districts it is usually caused by the irritation of the nasal passages resulting from exposure to plant pollen floating in the atmosphere, some plants being greater offenders than others in this respect. The most prompt and effective relief is obtained by removal from the pollen-infected district. The mucous membrane of the nose may be partially protected by a gentle but thorough application of vaseline to its surface with the little finger, or otherwise, or by spraying with an atomizer vaseline liquefied by gentle heat. The writer has obtained excellent results in obstinate cases of hay fever by the internal administration of Fowler's Solution in five-drop doses three times a day, continued for, say, two weeks at a time, with an intermission of two weeks, then a resumption of the treatment for the same period, and so on. Fowler's Solution is a preparation of arsenic, which is unsafe to use except under a physician's advice.

A Handy Water Disinfectant.

Where the purity of drinking water is suspected there is perhaps no more effective way of destroying its impurities than by boiling for 15 or 20 minutes or longer and then filtering through charcoal, powdered magnesite, or filter paper. The water, however, is usable without the filtering process which is merely resorted to for the purpose of eliminating from the water the visible or invisible organisms destroyed in the boiling. A simple water disinfectant kept in the medicine cabinet of almost every family is tincture of iodine. About three drops in a quart of water is sufficient to eliminate disease-producing bacteria, according to Frank Bachmann, chemist and bacteriologist, California State Board of Health.

House flies, active typhoid carriers, are among the dirtiest things that enter your homes. They come from sewers, privies, and manure heaps, carrying all sorts of filth on their feet, which they deposit on the food on which they light.

WORK THOU FOR PLEASURE.

Kenyon Cox

Work thou for pleasure; paint or sing
or carve
The thing thou lovest, though the
body starve.
Who works for glory misses oft the
goal;
Who works for money coins his very
soul.
Work for work's sake then, and it
well may be
That these things shall be added unto
these.

—Kenyon Cox.

LOSING WELL.

Bob sat in the barn doorway, staring moodily down the road. When he heard Dick's step, he began whistling. Usually Bob was proud of his brother's friendship, but just now that brother was the last person in

the world that he cared to see. Still, it had to be done, and the sooner the better. Bob whistled, and braced himself for the greeting he dreaded. It came in the form of a hearty hand upon his shoulder and a voice full of cheer.

"It was hard, sure enough, old man; but you'll have better luck next time."

"There won't be any next time," Bob muttered gruffly. "It's no use."

Dick nodded. "I know. I've been there. Do you remember the time I lost the race I'd been so sure of? I felt just as you do—disgusted—ready to throw the whole thing over. It was Prof. Dana who saved me. He came up and shook hands and congratulated me. I can remember his words now. 'Field,' he said, 'you put up a good race, and next time you'll win; but you've won a bigger victory today in proving yourself a good loser. I'm proud of you.' I wasn't, you know. I was black as thunder inside, but that made me think. Sometimes I've thought I didn't get anything in college so valuable as that sentence. It fits in everywhere."

This time Bob nodded.—Forward.

TO WASH UNDERWEAR.

When washing knit underwear or other garments by hand which have heavy buttons, button the garment together, as if being worn, and turn wrong side out. This does away with the annoying scraping on the washboard, which injures the buttons and also protects them as they go through the wringer.

TO RENOVATE OLD GILT FRAMES.

Simple gilt frames that are past retouching with gilt paint may have the gilding removed with fine sand paper or by rubbing down the surface with a moistened cloth dipped in powdered pumice or rotten stone. Paint with white, black or any desired color of enamel paint and apply later a coat of varnish.

WESTERN MEAT COMPANY
SAN FRANCISCO

SAN FRANCISCO.

San Francisco, June 27, 1917.

WHEAT.

Although there was a sudden drop of 2 cents in wheat at Chicago on Monday, no reflex action of decided character developed here, this market being already depressed and in listless condition. In this market very little is offering, and in absence of transactions of size enough on which to base values there can be no changes from quotations of last week. So little interest is being shown in the proceedings of the Call Board that the U. S. Army recruiting station, installed in the Exchange, does not interfere in the least with daily proceedings of grain board.

Sonora wheat, re-cleaned.....None offered
Northern Club.....None offered
California Club, per ctl.....None offered
Northern Bluestem.....\$4.75@4.80
Northern Red.....4.55@4.60
Russian Red.....Nominal

BARLEY.

Choice Feed registered a small decline on Tuesday, due perhaps more to sympathy with brewing than from any marked lack of interest. Dealers buying only in small quantities, and any movement of the market is hardly perceptible. New crop barley is showing a production heavier than anticipated and is of uniform good quality.

Shipping, per ctl.....Nominal
Brewing.....Nominal
Choice Feed, per ctl.....\$2.00@2.15

OATS.

Unless signs fail and quality of further receipts show improvement, oats should command high prices this year. Samples of oats—especially Reds—arriving in this market are very light and meet with no response from buyers. At present old crop has preference over new.

White Feed, per ctl.....\$2.55@2.60

BEANS.

Only one change in values this week, and that is limas. Due to lack of inquiry, with listless market, they have receded from last week's quotations, showing values of \$13 to \$13.50. Otherwise market generally is fairly steady. No activity expected until U. S. Government's action in food regulations is determined and its program made known to the public. There is a large increase in bean acreage this season, but the crop is not far enough advanced for it to have any bearing on old stocks.

Bayos, per ctl.....\$10.50@11.00
Blackeyes.....9.25@9.50

Mexican reds.....11.25@11.50
Tepary beans.....None offered
Garbanzos.....\$6.25@6.50

CORN.

The outlook for prohibition of the use of corn in the manufacture of alcoholic beverages has proved depressing in the Eastern markets, causing declines which may be temporary only and which, as yet, have had no similar effect on this market. In fact, during the last few days, owing to a scarcity of stocks, Eastern Yellow has been firmer. All lines remain unchanged in quotations. The regular half-yearly settlements among the grain men, occurring July 1st, have had the effect of distracting attention from the grain market until after the first of July.

(First-hand prices on strictly first-class grain, San Francisco.)
Eastern Yellow, per ctl., bulk.....\$3.30@3.40
California, sacked.....3.30@3.35
Milo Maize.....None offered
Egyptian.....\$3.75@3.90

HAY.

Arrivals of hay for the past week have exceeded 1,500 tons, most of which was new. Old hay practically all cleaned up and both dealers and consumers are glad to be rid of it with its prohibitive prices. Still, present figures for new crop are abnormally high for the time of year and not at all satisfactory to the trade. Many producers are asking prohibitive prices, which does not tend toward encouragement of local business or to allow California to compete in export market. Abnormally high prices of old hay throughout the spring were caused solely by the killing out by frost of the pastures. This condition being now removed and a good-sized crop being harvested, we may expect from now on to see values regulated by the old rule of supply and demand. The second cutting of alfalfa is coming into the market and is selling at about the same figures as prevailed for first cutting, although there is a weakness developing, in view of grain hay becoming lower.

Wheat, No. 1.....19.00@19.50
No. 2.....17.50@18.00
Tame oats.....19.00
Wild oats.....14.00@16.00
Barley.....15.00@16.50
Alfalfa, new, first cut.....14.00@15.50
Stock hay, new.....10.50@12.00
Straw, per bale.....1.00@1.10

FEEDSTUFFS.

After the first of July considerable more inquiry may be expected, as pastures in many districts are nearly fed down and green feed generally is drying up. At present there is no vim to the market and trading is very slack—so slack that, in order to close transactions, sellers have to make concessions. There is still no tankage offering and old cake is off the market. In view of present conditions, it is not possible to change quotations.

(Per ton, San Francisco.)

Best Pulp, per ton.....\$8.00@40.00
Alfalfa meal, per ton.....30.00@32.00
Bran, per ton.....38.00@40.00

POTATOES, ONIONS, ETC.

Quite a heavy drop has taken place in new potatoes, due to heavy receipts. However, from the fact that there is considerable difficulty in obtaining labor to dig potatoes, it is not likely that, in spite of a heavy crop, they will be markedly cheap until conditions change. Onions coming in plentifully and cannot hold at firm values. On Wednesday they were decidedly weak and had declined. Rhubarb hangs fire, and there is so little call for it that it is hardly worth quoting. Tomatoes took a drop during the week, owing to warm spell of weather in the valleys, which speeded up ripening. All other lines are well supplied, and market is sufficiently active to care for them without depreciation in price.

Asparagus, per box.....\$1.50@2.25
Peas, per lb.....2@3c

POULTRY.

With higher Eastern markets no stocks are arriving from outside the State. This leaves the market in control of domestic poultry, which is arriving in sufficient quantities to supply all demands. On Wednesday 410 coops arrived, which represents an average day's receipts at this time. Values held firmly at last week's prices, and market on all lines is in a healthy condition.

BUTTER.

Prices fluctuated throughout the week and finally closed Wednesday with a de-

cline of one-half cent from high water mark. Receipts are falling off, having totaled for the past week 594,300 pounds, against 715,800 for previous week. Still, with no shipping orders, conditions are unstable and unsatisfactory, the shorter receipts being unable to hold values. Advances from Australia state that concerns there offer to deliver butter in this market at 35 cents, a thing which, if consummated, will not be conducive to firm prices here.

Thurs. Fri. Sat. Mon. Tu. Wed.
Extras.....36 37 38½ 35½ 36½ 35½
Prime firsts.....35½ 35½ 36 35 36 35

EGGS.

Receipts heavy during week, but not so large as previous week, aggregating 17,779 cases, against 18,467 cases for the previous week. Since Wednesday of last week there has been a decline of a cent, although for several days the price dropped to and stayed at 30 cents for extras. Then came a slight advance, which was maintained Wednesday in spite of no sales that day. Less demand by reason of long vacation season served to offset smaller receipts.

Thurs. Fri. Sat. Mon. Tu. Wed.

CHEESE.

Considering the established weakness of last week, it is rather surprising that Y. A.'s have held up, although California Flats lost a half cent. For Jacks there has been a demand in the East to supply a depletion caused by European shippings, and cheese makers have been oil curing them to withstand the heat. During the week 297,300 pounds of cheese arrived in San Francisco, an increase over the previous week's arrivals of 238,800 pounds.

Y. A.'s.....24c
Fancy Calif. Flats, per lb.....20½c
Monterey cheese.....16@19c

DECIDUOUS FRUITS.

Cherries are arriving in rather poor condition owing to warm weather, and Royal Annes are cheaper. Apricots, peaches and plums have fallen in value in proportion to increase in supply. New apples meet with approval, selling readily at from 75 cents to \$2 per box, according to size. Figs are now coming in from Yolo and Sacramento counties, as well as from Imperial Valley and other southern points. Cantaloupes move rapidly at prevailing prices. Market on Wednesday was very active all along the line.

Apples, per box.....75c@82.10

Peaches, 1917.....5½@6c

BERRIES.

Good straws are worth a little more money this week. All berries arriving great quantities, and values, although unchanged, are hardly so stable as they were. With more delicious fruits in the market all the time, prices can hardly be expected to hold their own much longer.

Strawberries, per chest.....\$8.00@9.00
Longworths.....7.00@9.00
Blackberries, per crate.....1.00@1.25
Raspberries, per chest.....8.00@12.00
Longanberries, per chest.....4.00@5.00
Gooseberries, per lb.....

LOS ANGELES.

Los Angeles, June 26, 1917.

BUTTER.

Receipts of week ending June 26.....350.1
Receipts of same week last year.....352.9

With more coming in, and consumption under influence of hot weather not strong, the tone of the market was weak. But with a fair shipping demand from south of us, old prices were maintained up to last Saturday. Monday, however, under the influence of liberal receipts and a low market in San Francisco, saw a break here on call of 2 cents and not much trading. Production seems to be increasing and a outlet East at a profit. Creameries depend upon home demand, which is not sufficiently strong to keep high prices up. Chicago advanced 1½c up to Monday on extra and New York 1c, but this was not sufficient to offset the bearish feeling on the Coast. Stocks of butter here in cold storage June 21, 1917, were 195,917 pounds, against 254,014 pounds same date last year, a falling off of 55,057 pounds. There was taken into cold storage for week ending June 21, 1917, 731 pounds, against 49,273 pounds same week last year, showing receipts pretty well taken care of by current demand. Tuesday, in sympathy with an advance in San Francisco and lighter receipts, extras were bid up on call 1½c and closed firm at the advance. No sellers even at this improvement, the light arrivals and stronger tone of the market north of us causing a firm feeling among holders.

EGGS.

Receipts (railroads) for week ending June 26, 1917, 2,266 cases.
Receipts (railroads) for week ending June 26, 1916, 3,292 cases.

This market continues featureless. The receipts for past week were light and fairly well taken care of by the trade. The Eastern markets are higher than a week ago, Chicago advancing up to Monday 1½c while New York is firm to ¼c up. This improvement, however, was not sufficient to encourage shipments, hence failed to influence market here or encourage speculation. The holdings of eggs here in cold storage, June 21, 1917, were 75,776 cases, against 63,908 cases same date last year. There were received into cold storage for the week ending June 21, 1917, 2,229 cases, against 3,037 cases same week last year. Tuesday, with light receipts and advancing markets, both East and North, caused an advance of 1c on extras and pullets on call and more trading than for some days, finish was firm.

POULTRY.

There was more life to the market the past week, but with a rush of broilers and light hens on the market they ruled lower. Fryers steady and in good demand; heavy hens sold fairly well at old prices. Ducks slow sale. Turkeys not wanted. Those coming in very poor.

We quote from growers:
Broilers, 1½ to 2 lbs.....22c
Fryers, 2½ to 3 lbs.....22c
Hens over 4 lbs.....12@13c
Hens under 4 lbs.....12@13c

Special Deciduous Market Report

(By J. L. Nagle.)

Sacramento, June 26, 1917.

The extreme heat of the past week has caused considerable damage to early varieties of plums and apricots. We are informed that in some districts apricots are too ripe even to dry, but the height of the apricot season had passed before the hot spell, and the growers realized better prices than for many years past. In fact, the market on all varieties of deciduous up to date has been unusually active, with resultant high prices.

A few plums from the Sacramento river and in the hill districts were scalded by the heat, but the damage was slight.

Early peaches are running to small sizes, due to the unfavorable growing weather during the spring, but the carrying quality seems to have been improved, as was the case throughout the cherry season.

Bartlett pears are of exceptional quality. The crop is heavy in most districts and will be moving the latter part of this week. At the present time, canners have made no active campaign for their supplies,

though it is rumored that the opening price will be in the neighborhood of \$35 to \$40 a ton. This figure is not altogether satisfactory to growers, but owing to the heavy crop it is likely that a heavy tonnage will be sold for canning purposes.

The following prices have ruled for the week:

New York—Tartarian cherries averaged \$1.10, Oregon \$1.35, Royal Annes \$1.25, Bing \$1.75, Royal apricots \$2.25, Beauty plums \$2.55, Climan \$1.85, Formosa \$2.60, Tragedy \$2.85, Climan \$2.40, Alexander peaches \$1.35.

Boston—Tartarian cherries averaged \$1.15, Bigarreau \$1.42, Royal Annes \$1.52, Bing \$2.10, Royal apricots \$1.85, Shiro plums \$2.30, Climan \$1.67, Beauty \$3.05, Tragedy \$3.25, Alexander peaches \$1.50.

Chicago—Royal apricots averaged \$1.75, Alexander peaches \$1.40, Triumph \$1.55, Formosa \$2.43, Climan \$1.75, Tragedy \$2.73, Climan \$2.10, Beauty \$2.47, Bigarreau cherries \$1.47, Royal Anne \$1.57, Oregon \$1.60, Bing \$2.30.

Total shipments to date, 865 cars. Total shipments same date, 1916, 1,646 cars.

Special Citrus Market Report

Los Angeles, June 26, 1917.

Shipments of citrus fruits from Southern California from November 1 to June 24: Oranges, 30,907 cars, and lemons, 5752 cars. Same time last year: Oranges, 24,747 cars, and lemons, 4772 cars.

Shipments from Central California from November 1 to June 22: Oranges, 4571 cars, and lemons, 164 cars. Same time last year: Oranges, 5390 cars, and lemons, 146 cars.

Markets at the East the past week showed increased strength and best stock brought a little more money. Few navels now going forward and market may be said to be controlled by Valencia's, which are of good quality and are selling well, bringing a little more money. Lemons were reported higher at all eastern markets, choice stock in good demand. Low grades draggy and unimproved. Locally the situation is unchanged from a week ago. Too much delicious fruit and too many berries coming in for the good of the orange market. Packers, while in the market, are buying sparingly and were bidding last week's prices. For navels and miscellaneous varieties 1½@1½c per pound

in grove, picked. Valencia's 1½@2c per pound in grove, picked. Grape fruit still dull at 1½@2c per pound in grove, picked. Lemons, when choice, meeting with a little better demand and firm, but lots of poor stock still on the market and hard to move.

AUCTION SALES.

New York, June 25.—Fifty-seven cars of oranges and four cars lemons sold. Oranges strong and slightly higher. Weather fair. California navels averaged \$1.75@3.50. Valencia's averaged \$3.20@4.50. Lemons averaged \$4.15@5.70.

Boston, June 25.—Thirty-one cars sold. Market unsold on navels, doing better on Valencia's; lemons unchanged. California navels averaged \$1.85@4.10. Valencia's averaged \$3.90@4.70. Lemons averaged \$3.65@5.50.

Philadelphia, June 25.—Fifteen cars sold. Market strong and higher on both oranges and lemons. California navels averaged \$2.35@3.45. Valencia's averaged \$3.15@4.60. Lemons averaged \$3.30@5.10.

FRUITS.

Market well supplied and under increased offerings prices generally lower. Cherries in good demand, but sold a little lower. Many of them coming in poor condition, either being dried by intense heat or sun-burnt. Peaches, too, coming in more freely and quality of offerings mixed. Choice fruit in fair demand at fair prices, the less desirable dull and lower. Grapes steady and slow sale. Apples coming in with some freedom; sales slow.

We quote from growers:
Apples, White Astrachan, per box, \$2.50
do, Red Astrachan, per lug \$1.10@1.20

We quote from growers:
Avocados, per doz. 4.00@5.00
Cherries, black Tartarians, per lb. 6@12c
Royal Anne 8@12c
Soft White, per lb. 3@7c
Gooseberries, per lb. 6@7c
Apricots, per lug. 40@60c
Peaches, local, per lug. 75c@1.25
do, Northern, per lb. 5@6c
Grapes, Imperial Valley Malaga, 4-basket crate \$2.00@2.25

BERRIES.

Market much better supplied the past week and under influence of increased offerings prices ruled lower and sales slow. Crop less damaged than expected.

We quote from growers:
Strawberries—
Poor to choice, 30-basket crate 90c@1.10
Fancy, 30-basket crate 1.15@1.25
Blackberries, 30-basket crate 1.00@1.10
Raspberries, 30-basket crate 1.00@1.10
Loganberries, per case 1.00@1.10

MELONS.

There has been a sharp break in this

SHORTAGE OF BOX SHOOK SERIOUS FOR FRUIT SHIPPERS.

It seems that the backward season has made late the entry of the lumbermen in the Pacific Northwest timber belts, whence the material for packing boxes comes, with the result that the ripening deciduous and citrus fruit in California is accumulating faster than the wherewithal with which to box it for shipment. An added complication to the situation has been the increased wages demanded by the laborers in the lumber camps and box factories. It is not improbable that this scarcity of box material may become still more acute, and it behooves growers to put in their orders early so as to avoid possible embarrassment later in the season.

market since our last review. Receipts Monday reached twenty-eight cars of cantaloupes and under such a supply the market went to pieces. Watermelons also coming in more freely, six cars on Monday, but they held up better than cantaloupes. But are lower than a week ago. Best in fair demand.

We quote from growers:
Cantaloupes, Imperial, standard crates \$1.25@1.50
do, Imperial, pony crates 1.20@1.30
Imperial Valley Honey Dew Melons, per crate of nine and ten 2.00
Watermelons, per cwt. 2.00@2.25

VEGETABLES.

Market well supplied and with a falling off in the shipping demand the tendency of prices was lower. Cabbage was in little better demand, but is still cheap as ever.

Potatoes sharply lower. Receipts liberal and shipping demand falling off, leaving a heavy supply for home trade, hence lower prices and slow sales. Onions in good supply, dull and weak. Corn coming in more freely, slow sale and lower. Tomatoes in better supply and lower, demand fair. Home grown now arriving. Summer squash steady and fair demand. Cucumbers in good supply, slow sale and weak. Peas and string beans lower under lighter offerings and demand fair for all good stock.

We quote from growers:
New potatoes, per cwt. \$2.00@2.25
Peas, per lb. 5@5½c
New onions, crystal wax and Bermuda, per crate \$1.00
Onions, Northern, cwt. 1.25
String beans, w, per lb. 5c
do, Kentucky Wonder, per lb. 5½@6c
Imperial tomatoes, 4-bskt crate \$1.25
do, do, lug 1.50
Summer squash, lug 40@50c
Cucumbers, per box of 2½ to 3 dozen 40@50c
Green corn, lug 75c@85c
Cabbage, per 100 lbs. 50@60c
Lima beans, per lb. 5@6c
Okra, per lb. 6@8c

HAY.

There was a little more moving the past week, but prices were lower on alfalfa and weak on grain hay. More coming, demand was a little better but not sufficiently strong to hold prices up in face of the increased offerings. Clearances were hard to make and some of the lower grades had to be carried over each day. Receipts for the week ending Tuesday, 106 cars.

We quote f. o. b. Los Angeles:
Barley hay, ton \$19.00@21.00
Oat hay, ton 20.00@22.00
Alfalfa, northern, per ton 16.00@17.00
Alfalfa, local, ton 18.00@19.00
Straw, ton 9.00@10.00

HONEY AND BEESWAX.

Very little doing in this market the past week. The trade is holding back and declining to take hold at the high prices. While the crop is admitted to be short prices are so much higher that buyers hesitate to pay the prices asked. White orange honey is off ¼c and others are weak.

We quote from growers:
White orange, extracted, per lb. 13c
White sage, extracted, per lb. 12½c
Light amber sage, extracted, per lb. 9c
Light amber alfalfa, extracted, lb. 8½c
Beeswax, per lb. 32½c

Publisher's Department.

Prof. Wickson is working steadily on the revision of the 4th edition of "California Vegetables," which we expect to have printed about September 1st.

Mrs. E. Campbell, San Mateo county, writes: "We shall continue reading the Rural Press with admiration and interest. We have the 1st and 2nd Thousand Answers, and otherwise cannot keep in practice with the theories already imbibed. We wish the Press and all its people all the success they deserve, which is much."

Hurrah for our field force. During the past week we added 333 new, paid subscribers to our list. Our list is now gaining about 50 per cent faster than ever before. Several solicitors sent in over 40 new subscribers each, and one secured 69. At the rate we are gaining it will not take us long to pass the 30,000 mark we set at the beginning of the year.

Special Livestock Market Report

San Francisco, June 27, 1917.

CATTLE.—Very little hay-fed stock is now arriving, though the grassers received are in fair condition. The latter are more plentiful than was expected at this time. Good prices are obtained for such prime beef as may be offered. The tendency of quotations for this class of stock is upward. The receipt of calves is still light, and hardly meets the demand. Stock growers, both range and dairy, are disposed to hold back their young stock. The price situation is strong.

Grass Steers.
No. 1 weighing 900@1200 lbs. 8½@8¾c
No. 1 weighing 1200@1400 lbs. 8½@8¾c
Second quality 8@8½c
Thin undesirable 6½@7½c

Grass Cows and Heifers.
No. 1 6½@7½c
Second quality 6¼@6½c
Common to thin 6@6¼c
Undesirable 4@5c
Hay-fed Cattle ½@¾c higher.

Bulls and Stags—Good.
Fair 5½@5¾c
Thin 4@5c

Calves.
Lightweight 9¼@9½c
Medium 8¼@8½c
Heavy 7@7½c

SHEEP.—The sheep supply continues to be far behind market requirements. The sky-rocketing prices of wool have much to do with the reluctance of sheep men to part with their stock, even at prevailing fancy prices. Lambs are also scarce, and only tiptop prices can induce holders to sell.

Lambs.
Yearling 12@12½c
Milk 12@12½c

Sheep.
Unshorn wethers 11c
Unshorn ewes 10c

HOGS.—Hog stock is not plentiful, but about equals the demand, as the high price of pork is discouraging large consumption. Packers, too, are loth to continue operations on a large scale, in view of ruling prices. Quotations are about stationary.

Hard, grain-fed, 100 to 150 13c
Hard, grain-fed, 150 to 300 14½@15c
Hard, grain-fed, 300 to 400 14½@14¾c

DRESSED MEATS.—There is little activity in this line, little suitable stock offering. The offerings of veal about equal the requirements. There is little or no change in prices. The same may be said of mutton and pork.

Steers, No. 1 13½c
Second quality 12½@13c
Cows and Heifers 11@12c

Calves, as to size, etc. 12@14c
Lambs—Suckling 20c
Yearling 19c

Sheep—Wethers 18c
Ewes 17c
Hogs 20c

HORSES.

There is no well established horse market in San Francisco. Quite a little business is done at the various auction marts and at private sale. Nominal quotations are about as follows:

Drafters, 1700 lbs. and up \$250@275
Drafters, 1550 to 1650 lbs. 150@185
Chunks, 1350 to 1500 lbs. 150@175
Wagon horses, 1050 to 1350 lbs. 110@130
Green Mountain range horses, 950 to 1200 lbs. 50@85

Los Angeles, June 26, 1917.

CATTLE.—The market situation is unchanged from a week ago. While killers are getting all the cattle they want, feeders are not pushing best steers on the

market, but are disposed to sell cheaper stuff, which is finding fairly ready sale. The demand is for cheaper meats rather than for the better "cuts," which are slow sale. The result is killers are using more cows and less steers and this is having a tendency to hold market down for higher priced cattle. Calves coming in less freely, though supply is ample for demand, which is light at old prices.

Per cwt. f. o. b. Los Angeles:
Beef steers, 1000 to 1100 lbs. \$8.50@9.00
Prime cows and heifers 7.00@7.50
Good cows and heifers 6.50@7.00
Calves, per cwt 8.00@9.00

HOGS.—Market past week very quiet. Receipts light, but as arrivals were mainly made up of half grown and half fat hogs, there was little to encourage buyers. Killers only wanted a few hogs. Hot weather and light demand for pork and poor quality of hogs offered, tending to create a draggy and weak market for all except choice grain fed hogs, which continue scarce and command a premium over quotations.

Per cwt. f. o. b. Los Angeles:
Heavy, averaging 250@300 lbs. \$12.00@12.50
Mixed, 200@250 lbs. 13.50@14.50
Light, 175@200 lbs. 13.50@14.50
Rough docked 20 pounds, piggy sows 40 pounds and stags 40 per cent.

SHEEP.—As with cattle and hogs, the market the past week lacked snap. The high price of mutton and lamb causing lighter consumption than previous years. Then, too, the abundance of fruits and vegetables is causing a lighter consumption of meats. Hence the wants of killers have not been heavy and they have been getting enough to supply their wants at old prices, though tone of market is firm. California and Arizona continue to supply most of the demand.

Per cwt. f. o. b. Los Angeles:
Prime wethers 9.00@10.00
Prime ewes 9.50@10.00
Yearlings 10.50@11.00
Lambs 13.00@14.00

North Portland, Ore., June 25, 1917.

BEEF STEERS.—Big supply received for today's market with ordinary to fair orders. Prime steers selling on a strong to higher basis, one load of strictly fat California steers bringing \$10.75, with the bulk of fair grade steers going from \$9.00@9.75. The large string of buyers took large supply in good time. Supply of fair to prime steers does not meet the demand, common and ordinary steers are rather slow, but steady prices ruled generally.

BUTCHER CATTLE.—Strictly choice cows and heifers are strong, with several loads selling at \$8.50@9.00, several good ones bringing around \$8.00, strictly fat dairy bred cows from \$7.25@7.75, ordinary and common cows slow and lower, selling from \$5.00@6.50. Bulls were in good supply with equally as good demand, a bunch of good bulls were sold at \$6.85; top on bulls being \$7.50; calves are unchanged with little demand.

HOGS.—Brisk trade in hogs, demand was excellent, with a comparatively good supply. Prime hogs advanced 25 to 35 cents with several loads bringing \$15.00; bulk of sales from \$15.35@15.50; Eastern market dropped off again today, the hog market here seems to be checked with very few hogs in sight.

SHEEP.—The sheep market ruled generally steady, the demand seems to be checked, at least temporarily, spring lambs selling at an advance of 25 cents, bringing from \$13.00@13.50, shorn yearlings \$9.00@10.00, heavy ewes \$7.50@8.50.

THE RECKLESS SLAUGHTER OF CALVES IS DISCOURAGED.

The widespread agitation against the marketing of dairy and range calves—an agitation both timely and pertinent—is having its effect. The receipts of such stock on the local market have fallen off materially and quotations have been marked up. Declining prices for hay and improved pasturage have encouraged stockmen and dairymen to keep back their young stock. The National Council of Defense has sent out assurances that owners of calves will be well repaid by feeding until next fall or spring and putting on additional weight.
